General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

General Comment

I oppose this proposed rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

In fact, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Additionally, switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. All these represent threats to U.S. national security.

I urge you to oppose this proposed rule change.

General Comment

As a citizen concerned with our nation's security, I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. I have deep concerns about the effect this rule change would cause. Specifically, I have many concerns, including that: it would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would remove licensing requirements for brokers, increasing the risk of trafficking. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Again, I strongly oppose this rule change. Thank you.

General Comment

I oppose changing the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Switching the regulation of firearms exports from the State Department to the Commerce Department would make it easier for guns to end up in the hands of those outside of the law like organized crime and terrorist organizations and enemy regimes. It would further fuel violence that destabilizes countries and causes mass migration.

Selling guns outside of the US is NOT business as usual and must be monitored by expertise of the State Dept, not the Commerce Department.

How about we don't loosen restrictions on firearms.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

General Comment

As an American teacher and someone who cares deeply about ending random violence and human rights abuses around the world, I firmly OPPOSE the rule change that would move the handling of export licenses for semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department. Personally, I don't trust American weapons manufacturers to be ethical when it comes to such foreign sales. In addition, the Commerce Department isn't structure to handle proper oversight of such sales.

Making it easier for weapons manufacturers to sell their wares without the oversight of the US Congress is insanity and flies in the face of everything the Trump administration says about trying to keep the Homeland safe from foreign terror and gang threats. Investigations have shown that many of the weapons used in drug and terror related crimes in Latin America (where I'm currently living and teaching) already originate in the USA. Taking away Congress's and the US State Department's oversight of large sales of semi-automatic weapons will only increase the violence in countries where human rights abuses are now common place. This, in turn, will cause more refugees to flee violence-plagued countries and attempt to cross into the USA illegally.

Isn't anyone in Washington, D. C. these days able to use critical thinking skills and connect the dots. The violence always makes it's way back to (and inside) America's borders.

I urge you to reject this rule change!

Friends, I write in OPPOSITION to a rules change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department. This transfer of authority would facilitate vastly increased sales of arms internationally, with serious implications for our national security. Such a policy could lead to an unfortunate future situation where our own combat troops face troublemakers armed with American made weaponry. This would be an unacceptable outcome! Please maintain the status quo on this issue, as current regulations have been effective for decades.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less! It is unthinkable that the US would be considering promoting the sale of assault weapons world-wide.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The following reasons highlight why the change should not occur:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Here are more details on how the rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

For multiple reasons, this rule change is not in the interests of the American people and I am in opposition to the change.

General Comment

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change to move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

At present, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.

With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security. Weapons sales even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles in obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Here are more details on how the rule change would make the world a far more dangerous place:

I fear that this would be the undoing of civilizing as we know it. At this point in history, with record unrest, human migration and displacement, adding more arms is disaster to the common man. Governments cannot win, peace cannot win, humanity cannot win. Changing the overseeing cabinet depart from the State to the Commerce department can only be for the purpose of selling death.

All it will do is control population growth. ZPG

This is an ABSOLUTE HORRIBLE IDEA! Just insane. This idea that one bullet for one pull of the trigger is somehow not worthy of maximum oversight is just naive at the least, and a complete disregard for human life at the worst. The state department must continue to safeguard our nation and oversee all firearm sales. This attempt to switch it to the Commerce Department is nothing more than a reckless money grab at the risk of human lives.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

I also believe that the United states has showered more than enough grief on citizens of the world through the excess gifting and sale of military weapons, including firearms but not forgetting shoulder fired rockets, Abrams tanks, F-35 fighters, and the list goes on. WE need to get in the peace business.

Don't make it easier to export firearms. They usually end up with the wrong people anyway.
ENOUGH with guns everywhere.

I strongly oppose the rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security. Below are more reasons why the proposed rule change should not be approved:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

It would impact our national security by facilitating firearms exports to oppressive regimes, removing safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fueling violence that destabilizes countries and causes mass migration.

The world needs less firearms, not more.

Humanity needs less killing, not more.

General Comment

Dear Sir:

I strongly oppose the proposal to switch the regulation of firearms from the U.S. State Department to the U.S. Department of Commerce. Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

The rule change would make the world a far more dangerous place: It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would also remove licensing requirements for brokers, increasing the risk of trafficking. Additionally it would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

In summary, firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

The proposed changes to regulating international weapons sales opens the door to increased violence in other countries where human rights are at risk, strengthening of local gangs having access to more dangerous weapons, endangers fragile democracies threatened by tyrannical groups, and increases dangers to civil peace and families. For these reasons, I oppose the shifting of weapons deals to the Commerce Department. The globe and local citizens would be in danger of losing harmonious governance and peace in our families across the world.

I oppose this rule change that would switch the regulation of firearms export from the U.S. State Department to the U.S. Commerce Department.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

This rule change would make the world a far more dangerous place:

- * It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- * It would remove licensing requirements for brokers, increasing the risk of trafficking.
- * It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

General Comment

I oppose the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Please do not change the rules that help make our country and our world a safer place.

As a gun owner, former hunter, and former ARCAO (Korea: Camp Henry, Camp Humphries, Camp Casey 71/72 when these bases were primitive), I oppose the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. I do not want weapons in the hands of terrorists and criminals in other countries that can be used, not only against their own people, but against Americans abroad.

Ive travelled the world and been in many conflict zones, including Afghanistan. The lawlessness of these areas is exacerbated by the fact that everybody owns a weapon. Small arms and light weapons are the preferred weapon of these small-time bullies, drug dealers, and cartels, as well as big-time terrorists like ISIS, al-Qaeda, al-Shabaab, Boko Haram.

Making light weapons (the definition includes: revolvers and self-loading pistols, rifles and carbines, assault rifles, sub-machine guns and light machine guns) available as a commodity anybody can order without any restrictions over the internet, makes it easy for small arms dealers to buy and resell these weapons, the favorites of terrorists, criminals, and drug dealers. We dont want American criminals to have these weapons. Lets not loose them on innocent civilians around the world. Say no to any loosening of any restrictions of exporting weapons. Dont be tone deaf to American values. Americans dont want more foreign threats, any more than we want more communities disrupted by gun violence. Make it harder for these terrorists to get guns, not easier. Keep cheap guns out of the hands of these bullies. Keep American government workers, international corporate workers, and tourists safe from criminals. People over profit.

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business).[1] This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

WE NEED TO BAN ALL SEMI, AUTOMATIC WEAPONS, BUMP STOCKS AND ASSAULT RIFLES/GUNS AND BUY BACK ALL OF THESE WEAPONS OF WAR.

Our country is being destroyed by guns. For the lives of the people, please do not pass this rule change.

Recently proposed, suggestion is a tragedy to humankind- expanding USAs reputation as merchant of death to civilians. Bad enough America is already known for it in military weapons.

Gun manufactures, NRA and others are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business).[1] This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

Everything coming out of this administration- coal to soybeans, to auto parts, to steel is labeled national security when true be told its corporate socialism and another white collar federally funded jobs program.

Export of weapons (all types, make, model, purpose) need to remain with State department not commerce.

General Comment

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

Please take action to help make America and the world a safer place.

I oppose this rule change. It is unnecessary and not smart. Good for criminals only. Is this what we want to encourage unlimited bad guys with unlimited weapons with unlimited power? Some rules were not meant to be changed. It takes wisdom to know that. It takes conscience to act upon it and stand up for what is correct.

General Comment

I oppose this change that would switch the regulation of firearms export from the US State Dept to the US Commerce Dept.

As a conservative, I am not against domestic gun sales, but I am against terrorism, and I feel strongly that national protection is more important than a few bucks of profit. We cannot let gun sales happen to foreign countries without tight regulation, and the US Commerce dept simply does not have the resources to adequately police foreign gun sales.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. Firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

This rule would also remove the State Departments block on the 3D printing of firearms, made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

General Comment

I am strongly opposed to the proposed rule change that would transfer the oversight of non-military firearms exports from the State Department to the Commerce Department. The proposed rule is supported by the NRA and the only purpose is to increase the profits for the US gun industry--one that loosing support in the USA. The only entity that is requesting this change is the gun lobby and it expects this change will increase firearms exports by 20%. This will put more guns in the hands of terrorists around the world. It is even more dangerous because it moves supervision and oversize to an agency that prioritizes business over national security. The U.S. Congress would also lose its ability to oversee commercial weapons sales of \$1 million or more; this makes no sense. This seems like one more attempt to legitimize semiautomatic assault rifles as civilian products when these battlefield weapons have killed too many civilians already. Please do not approve this blatant corporate giveaway. The world does not need more instruments of mass killing--only the gun lobby would think this is a good idea. We the people are watching as you make these decisions. Please make them wisely as you will be accountable.

General Comment

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

I am opposed to this change.

To Whom It May Concern:

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

The proposed rule change would make the world a far more dangerous place for the following reasons:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Thank you for your considerations.

Sincerely,

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. We don't need to arm the world; we already have enough problems with firearms and gun violence in our own country. How can we be assured that guns will be in the hands of those in the right rather than our enemies? Have we learned nothing from past mistakes with firearms? Thank you.

Here are details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

It would totally nullify the ability of the US to keep from arming dangerous foreign nationals, thereby making attacks on US soil far more likely.

This stupid idea to enrich the already rich arms dealers boggles the imagination!

I urge the Commerce and State Departments to oppose relaxing rules that would make it easier for U.S. firearm manufacturers to export assault rifles and other guns, with less oversight and accountability. With gun violence killing 1,000 people around the world every day, we should be making it harder, not easier, to export U.S. made weapons of war.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Other very scary aspects of this change are:

- It would eliminate the State Departments Blue Lantern program, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

- It would remove licensing requirements for brokers, increasing the risk of trafficking.

- It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe. This alone is REALLY terrifying.

I am writing in opposition to a proposed rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

Please do not make the primary focus of international arms sales into an effort to increase American exports of firearms to help American businesses. The primary issue here is and should remain the military consequences of such export sales. As such, the State Department should continue to be in charge of such export licences.

I oppose the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S.

Commerce Department. With the rule change, Congress would no longer be automatically informed about sizable weapons

sales that it could stop in the name of national security, even to countries where there are serious human rights concerns.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau

of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist

organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American

guns and ammunition.

General Comment

I strongly oppose the transfer of licensing semiautomatic and other high-powered weapons exports from the U.S. State Department, which is focused on safeguarding our nation, to the U.S. Commerce Department, which is focused on promoting American sales. This would obviously greatly increase the unregulated sale of dangerous weapons to organized crime, tyrannical regimes, and terrorist organizations, making us all less safe. These gun sales would increase the violence that is causing mass migrations and the problems that entails for countries (here or in Europe) that are confronted with large numbers of refugees fleeing violence. Firearms are quite rightly categorized as military, and their export needs to be carefully restrained, not encouraged. Gun companies will profit; everyone else will be seriously harmed.

The proposed transfer would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would remove licensing requirements for brokers, increasing the risk of trafficking to criminal and terrorist purchasers. The Commerce Department does not have the means to check on and enforce regulations on the sale of weapons all over the globe. There will be a free-for-all of arms sales to the people and groups most dangerous to global peace and stability.

Furthermore, the proposed transfer would remove the State Departments block on the 3D printing of firearms. Once instructions for how to 3D print weapons were posted online, the State Department successfully charged the person posting that with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe. More lethal weapons in the wrong hands mean more deaths of good and innocent folk. The proposed transfer of weapon exports from the State Department to the Commerce Department is totally irresponsible and extremely dangerous to the safety of everyone. I strongly urge you to oppose this proposed change.

I write regarding the pending plan to switch the regulation of firearms exports from the State Department to the Commerce Department

This is a bad idea that would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

This rule change would make the world a far more dangerous place for several reasons. First, it would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. Secondly it would remove licensing requirements for brokers, increasing the risk of trafficking. Third, it would remove the State Departments block on the 3D printing of firearms.

When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe. That cannot be good.

Please do not allow the regulation of firearms exports to be taken away from the State Department, such a move would be enormously irresponsible and damaging to the safety of these United States. Thank you.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

HERES THE LOW DOWN: Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The U.S. State Department focuses on safeguarding our nation whereas the U.S. Commerce Department focuses on promoting American business. Clearly the concern of firearms in the wrong hands is of fundamental concern to the State Department, whereas the Commerce Department would only want to sell more arms abroa. We must insist that the security of our nation take precedence over the profits of some arms providers.

Firearms exports are rightly classified as military" and blocking sales of large batches of firearms to foreign countries is a reasonable control to prevent the unleashing of weapons into the hands of those who could cause serious harm to human rights, international relations, or even our own national security. Further, commercial export of large caches of American guns and ammunition could make it too easy for firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents to obtain enough weapons to wreak havoc around the world. These are serious concerns.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Exporting firearms should be subject to more controls, not less! The Commerce Dept. is NOT ready or able to maintain the stringent controls and oversight that is needed to keep weapons trade restricted enough to handle export licensing, shipment inspections, and other appropriate restrictions on the types, quantities, and categories of firearms exports.

I very strongly oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. This transfer of authority would open new floodgates for arms sales internationally, with very serious implications for our national security.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. Please keep the regulations of firearm export under the responsibility of the U.S. State Department.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. I oppose any rule change here.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

The rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere.

This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

It would remove the State Departments block on the 3D printing of firearms.

When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Also...

More guns against America is more guns against America, no matter how thinly or big you slice it for Republicans or for Democrats. Even the Trump administration should realize how destructive and dangerous this really is.

Hi I am a regular working mom whose kids are grown - so I don't worry about them in school now. However, if the State Department gives up control of gun and ammunition sales around the world, there is a terrible tragedy waiting to happen in another country with guns from the US. The State Department has more resources to track large sales and shipments and to keep Congress informed of these developments.

Please keep tracking of worldwide gun sales within the State Department - to keep us and the world safer.

General Comment

Why would we switch the regulation of firearms exports from the State Department to the Commerce Department? Our government should not be in the business of promoting lethal firearm sales around the world. We should reducing

We must limit firearms exports to oppressive regimes, not encourage them. We must strengthen safeguards that help keep organized crime and terrorist organizations from obtaining weapons, not weaken them.

Why would our government eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them?

One good example of the danger of unregulated gun sales is the rampant smuggling of guns across the Mexican border. The vast amount of weapons easily available across the boarder, sourced from unregulated American gun shows has turned Mexico into a killing field. We do not need to promote the same death and destruction in other parts of the world by removing licensing requirements for brokers.

And removing the State Departments block on the 3D printing of firearms BY transferring the authority to the Department of Commerce is simply ridiculous.

Do not transfer export license responsibility for semiautomatic weapons etc. to the Commerce Dept. Sane rational people who have foreign policy interests as the basis of their decision making must be in control not the expedient mercenary interests like the NRA that dominate the Commerce Dept. Their licensing practices would help create violence on a massive global basis, all based on the love of money and their appetite for violence. Stop this movement away from prudence and reason.

General Comment

I oppose the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Currently, firearms exports are classified as Military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far less hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

The following details on how the rule change would make the world a far more dangerous place concerns me:

- It would eliminate the State Departments Blue Lantern program (in place since 1940), which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- It would remove licensing requirements for brokers, increasing the risk of trafficking.
- It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

Again, I oppose the rule change because of all the dangers posed; it would make it easier for U.S. gun manufacturers to export firearms.

Please take action to help make our country and our world a safer place.
Thank you.

I can't even imagine that anyone who has followed the human carnage that arms dealers bring could even think of moving the regulation of selling of firearms from the US State Department to the Dept of Commerce. This is actually even worse than the other dozens of horrible things that have been proposed lately. Its worse than helping the ice caps melt.Its worse than drilling in the artic or putting lobbyists in charge of regulating pollution. Nothing is worse for individual suffering than more firepower. Dont even think about it!!!!

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department

successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

Thank you for taking action to help make our country and our world a safer place.

I think giving the gun industry, the right to sell arms internationally, without the state department overseeing the sales is a global disaster waiting to happen. Military weapons should only be sold to the military, not citizens.

General Comment

Currently, firearms exports are classified as military. Thus, they are regulated by the State Department. The advantage of the current regulatory system is that Congress can block sales of large batches of firearms to foreign countries, including countries with human rights abuses. With the proposed rule change addressed here, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, again, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. This situation would be problematic because it would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would remove licensing requirements for brokers, increasing the risk of trafficking. Further, it would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe, again, posing a serious threat to both national security and potential human rights abuses around the globe. For these reasons, I am against the proposed rule change.

Do not change the regulation of firearms exports from the State Department to the Commerce Department. The Commerce Department is not equipped to provide oversight of firearms exports. There would be an enormous risk of weapons getting into the hands of dangerous entities, and the world would be a much more dangerous place. Keep the regulation of exported firearms under the watchful eye of the State Department.

General Comment

I strongly oppose the proposed rule that would shift responsibility for oversight of international arms sales from the Department of State to the Department of Commerce. Widespread export of military grade weapons outside the U.S. poses a serious and credible threat to national security, meaning control should be vested in the State Department not in the Commerce Department whose primary interest is business expansion and profitability. In addition, it is clear that the Commerce Department has neither the staffing levels nor the expertise required to monitor and manage arms sales abroad.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Dear committee:

I am Anne Edwards a resident of California. The export of U.S. made firearms is not a wise or ethical commercial business. Oversight belongs in the U.S. State Department. It is already shameful and frightening enough to have our American people and our new US immigrants shot down by weapons poorly regulated here in the mainland United States. If we allow the export of guns to become a commercial enterprise and not a State Department peace regulated issue, we push more violence on others and ourselves.

"I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Sincerely,
Anne S. Edwards.

Please do not open the flood gates of weapon sales to all outside the United States which is what would happen if this became a 'business/commerce' decision rather than, as is the case now, your decision. We should not become arms sellers to the world - including terrorists and oppressive regimes. There are enough weapons in the world already to kill everyone many times over. Let's not make our country the one to add to this.

General Comment

I am strongly opposed to the proposal to change the regulation of firearm sales from the state department to the department of commerce. A move like this would likely destabilize many other countries and places in the world by providing easier access to firearms with fewer regulations on who can purchase them and for what purpose. Firearm sales outside of the US are military deals and should be regulated and controlled tightly. I believe the state department is better equipped and prepared to provide this regulation than the commerce department.

I am writing to strongly oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. This switch would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

This rule change would make the world a far more dangerous place, and I urge you to decide against it. Thank you.

The arms that are sold are used to kill people. Charlie Chaplin made the movie, "The Great Dictator" in 1940 as a satire on dictators and war. President Eisenhower warned of the military/industrial complex. This change is to make arms sales easier on the international market for the arms companies profits and the worlds determent.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Thank you for your attention to my profoundly grave concerns.

Sincerely,
Georgeanne Matranga

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

These weapons cause loss of life here at home in the US & we do not need to put them in the hands of possible terrorists or others with an agenda against the US. So many groups around the world would immediately use the weapons not for defense but for offense, to support causes the US does not support & take innocent lives. Let's not make it easier for them to get their hands on our weapons!

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. As a nation, we have already exported so many firearms to Mexico and Central America, that we are ruining their societies, making them more violent each day. I know with our present administration and their focus on money-making for the US, to move this to the Commerce Department would do this in so many other countries, as well. We must stop this harmful practice!

I oppose the proposed rule change that would switch the regulation of arms sales from the State Department to the Commerce Department. The US serves as a model by utilizing the special resources of the State Department to assure that arms exports are legal and dont result in international arms sales that may support rogue operators and illegal or terrorist activities abroad. State Department regulation of international arms sales helps assure that this unique type of commerce aligns with American foreign policy. The Commerce Department lacks the expertise and resources needed to provide this same type of oversight.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

Howdy,

Switching the responsibility for overseeing weapons sales from the State Dept to the Commerce Dept is a bad idea for these reasons:

- a) It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- b) It would remove licensing requirements for brokers, increasing the risk of trafficking.
- c) It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

The world is dangerous enough. We don't need this change.

General Comment

Moving handling of export licensing of weapons shipped overseas from the Department of State to the Department of Commerce would flood the world with military type weapons. Organized crime and terrorist would have almost unrestricted access to high firepower weaponry. Violence prone dictatorships, and countries with few or no human rights protections could indiscriminately murder more of their citizens. Congress would not be automatically informed of large firearms shipments that it may have good reason to ban. Commerce doesn't have the staff or the training to carry out pre-license and post-shipment inspections and submit the required reports. It would also remove licensing requirements for brokers, increasing the possibility of trafficking, and it would remove the block on 3D printing of firearms. In effect, this would allow anyone with a 3D printer to produce lethal weapons.

Firearms are deadly. They are used to kill people every day, around the world, in acts of political violence, terrorism, organized crime and human rights violations. They must be subject to more controls, not fewer.

I strenuously oppose the rule change that would switch regulation of firearms export from the Department of State to the Department of Commerce.

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The U.S. Commerce Department is focused on promoting American business, not on safeguarding the nation, which is the responsibility of the U.S. State Department. This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

The handling of export licenses for gun sales needs to stay in the hands of the State Department. The Commerce Department has no business dealing with this issue!

If we allow the NRAtO to manipulate these changes, the following issues arise:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Please DO NOT allow these dangerous changes to be bought by a group that is not looking out for the welfare of this country, nor the world!

Thank you.

I oppose this rule change. This transfer of authority from State to Commerce would open new floodgates for arms sales internationally, with serious implications for our national security.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Please do not put the sales of guns in the hands of the U.S. Dept. of Commerce. It is far too big of a responsibility for the people there to be expected to make life and death decisions on the fate of dangerous weapons.

In reality, the responsibility of a governing body is much more in line with reigning in the rampant gun industry that threatens the lives of men, women and children everywhere. There needs to be sober thought and discussion before ever risking the lives of many who encounter the dangerous side of weapon proliferation. God be with you.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. A move like this will make the world much more dangerous. Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Here are more details on how the rule change would make the world a far more dangerous place:

- * It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- * It would remove licensing requirements for brokers, increasing the risk of trafficking.
- * It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms should be subject to more controls, not less!

I OPPOSE the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Presently, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as Turkey and the Philippines.

Meanwhile, the Commerce Department does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far less hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

The rule change would make the world a far more dangerous place:

- It would eliminate the State Departments Blue Lantern program (in place since 1940), which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- It would remove licensing requirements for brokers, increasing the risk of trafficking.
- It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized

crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

Again, I oppose the rule change because of all the dangers posed; it would make it easier for U.S. gun manufacturers to export firearms.

Keep America, our country and our world a safer place!

Thank you.

General Comment

I strongly oppose shifting firearms oversight from the State Department to the Commerce Department. Streamlining and encouraging the sale of firearms, and reducing inspections and enforcement, is solidly AGAINST the interests of the U.S.:

Internationally, high firearm availability correlates strongly with high firearm violence and fatalities.

Making firearms more available WITHIN the U.S. by putting less scrutiny on shipments is the OPPOSITE of what we need to do in a climate of increasing criminal shooting acts.

Many of the most pressing international crises, from conflict in the middle east to the migration crisis from Central America, are fueled by violence utilizing American-made weapons. By making it easier to get American firearms abroad, we are only jeopardizing our OWN national interests.

While it is ultimately impossible to outright prevent individuals from acquiring information to design and/or manufacture firearms and components via 3D printing techniques, it is senseless to remove existing barriers to doing so. More firearms of questionable quality in the hands of more people with questionable training is an absolute recipe for disaster.

General Comment

I oppose the change of regulation of firearms exports from the State Department to the Commerce Department. I feel this would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. Firearms are not a mere commodity and need the oversight of the State Department as they are a national security concern.

General Comment

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Here are more details on how the rule change would make the world a far more dangerous place:

- 1.) It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- 2.) It would remove licensing requirements for brokers, increasing the risk of trafficking.
- 3.) It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

This is a blatant attempt to hide weapons sales from public oversight and to bypass existing controls over weapons exports which benefit no one on earth except the owners of the weapons manufacturing companies.

This rule change is not in the best interest of the people inside or outside of America and should not be approved.

We need less proliferation of weapons around the world, not more. This proposed rule change will result in more death and destruction and physical and psychological damage with no benefit to anyone except a few who will profit handily from the increased sales.

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business).[1] This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

I OPPOSE THIS PROPOSED CHANGE.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

I oppose any regulation change Regarding the administration of export of guns change over to the Commerce Department. This is definitely something that needs to be under the State department. This is a crucial matter regarding foreign affairs. This is not a commercial matter. To keep our country safe from terrorism and organized crime our state department has always been and should continue to be the correct governing body to regulate export and overseeing a gun sales.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Keep the State Department in control of the regulation of firearm's exports.

Thank you

Andrew Reegen

I understand that it is proposed to move the sale of assault rifles from the state department to the commerce department. If this is allowed to go through we will probably wind up supplying the world, especially all the wild crazies out there with the very best American arms. What happens when we have to send American soldiers to various parts of the world to rein in the crazies. Something is really wrong here.

General Comment

I am greatly concerned about the proposed transfer of firearms sales to the Department of Commerce. More than ever before in the history of this nation, firearms are being sold and bought for military purposes, and used by repressive governments and paramilitary groups against their own citizens, not only dissidents but also residents of regions whose resources are being sold off to outside corporations. Gang-like power is proliferating. It is essential that firearms sales be regulated by the State Department, which is concerned about our international relations and the opinion held about the United States in other parts of the world. My own safety as a citizen depends on an improvement in our behavior as a nation.

I oppose any rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. I believe this would be an extremely dangerous, causing arms sales to vastly increase internationally, with serious implications for our national security.

If this change were made, firearms exports to oppressive regimes would be facilitated, safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons would be removed, and the violence that destabilizes countries and causes mass migration would be fueled!

Please oppose this terrible proposal, and help keep our country safe.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

I do not want the handling of export licenses of semiautomatic assault rifles and other powerful military style firearms moved from the U.S. State Department to the U.S. Commerce Department. Regardless of how profitable the sales of more US made weapons would be to our firearms manufacturers, producing and selling more weapons to more nations of our violent planet would ultimately undermine US safety and security. Criminals and terrorists would use these additional weapons to prey upon Americans and our friends abroad and in our own country. There are already too many weapons loose in the world already. I am a retired US Army combat veteran, and I served to protect my country and our allies and friends, not to promote the profits of GREEDY multi-national corporations. Furthermore, our arms industry should be completely nationalized in order to produce necessary weapons and military equipment for our forces and those of our allies at lower cost and remove the profit motive for selling weapons of war.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change the NRA is pushing for, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

In addition, the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

We oppose this deal with the NRA. The NRA has no right to do this. We will continue to speak out and speak out we will. We demand answers right now. We demand the truth right now. This is a very big deal now. This is a very serious matter and issue right now. How does this make it safe? It does not make it safe. This will not go away anytime soon. Gun control has been a huge issue right now. The NRA has their hands in things they shouldn't have in. We don't have a safe America anymore. Our children don't feel safe in School anymore. How does this make it right? It does not make it right. We are here to make sure that our schools are safe. We are here to make sure that we feel safe outside of our homes whether it would be in parking lots, malls, movie theaters, churches, walking, parks and play grounds. We need to make sure that everyday people don't have to fear for their lives anymore. Criminals and guns do not mix. Keep the guns off the streets. Guns are not toys. Guns are dangerous. Whatever happened to safety first? Whatever happened to respect and common sense? Whatever happened to morals and values? To many innocent lives have been taken already. Families of the victims are upset, angry and frustrated on how the NRA is truly acting. We are all upset on how the NRA is acting these days. It is truly unfair to us. It is unfair to the families that lost loved ones. We will keep making noise until things change for the better. Whatever happened to the gun laws? The laws that we have now don't even work anymore. We are looking out for the families that lost loved ones. No one else seems to care anymore! Why is that? We are very disappointed in our government and lawmakers. We don't want to see anymore innocent people killed. Is this to much to ask? Think is the children and the schools!

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

I am opposed to the rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business).[1] This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security!

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]
It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the

Firearms are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less! We need to make the world a safer place. I am opposed to this rule change. Please dont do it. Our safety is more important than gun makers making more money.

[1] Trump move would make it easier for U.S. gun manufacturers to export firearms, The Washington Times, May 14, 2018.

[2] Trump wants to make foreign arms sales easier, The Boston Globe, June 23, 2018.

Safety is not what the NRA and the gun industry are concerned with. It's sales. They don't care who shoots who, they only see their profit margin going through the roof. The only problem is there are already too many guns out there already. The only positive here is American weapons tend to jam more often than European and Asian weapons, so the American profit margin probably won't be as high as they would like. To that end, the American manufacturers will undoubtedly whine like babies about unfair competition. American manufacturers don't focus on efficiency, but rather mega sales; whereas, European and Asian manufacturers strive for efficiency. During WW2, the Luftwaffe had Rhinemetal design and build a 30MM cannon for their fighters that could take down a bomber with 5 to 7 rounds outside of the range of our 50 calibers and they did it. Bomber crews called it the Jackhammer and it terrified them. A Soviet Sergeant named Kalishnakov acquired a German machine gun on the Eastern front and made some modifications. It was used in the early part of the Korean Conflict and the Army wasn't concerned. After Shenyang got it and put a sealed receiver group in it, our Armed Forces became very concerned over this new weapon, that was to become the most widely used a popular weapon in the world today, the AK-47. Don't expect American weapons to replace that anytime soon.

I strongly oppose the rule change that would move control of export licenses for firearms from the State Department to the Commerce Department. The Commerce Department is not equipped to prevent the sale of firearms to foreign countries where violence and crime and military conflict are rife. Semiautomatic assault weapons and other powerful firearms can destabilize these foreign regions and cause populations to flee across borders to save their lives. The State Department knows where arms should not be exported to, and it is responsible for protecting Americans from the impacts violence elsewhere, including organized crime, civil unrest and terrorism. The Commerce Department, on the other hand, is focused on promoting businesses, has little incentive to block sales, and lacks the staff to track hotspots where exporting firearms could be harmful and dangerous to our interests.

I am appalled at the idea of removing regulation of firearms exports, which would be the practical effect of having the Commerce Department "regulate" firearms sales. This opens the door to gun purchases by terrorists and repressive regimes, with no congressional oversight. Selling weapons to terrorists is a dumb way for gun manufacturers to make a buck, but obviously that's all they care about.

Dear sirs:

I am appalled by the proposed rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the Commerce Department. This basically means that a set of controls to guarantee that American weapons would not end up in terrorists hands will disappear. This change would facilitate firearms exports to oppressive regimes, remove safeguards that help organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. It would remove licensing requirements for brokers, increasing the risk of trafficking. It would remove the State Departments block on the 3D printing of firearms. Think of a world where any terrorist bent on destroying the USA was easy access to American weapons. Is this the world you want to create?

I oppose this proposed rule for the following reasons:

Once the State Departments Blue Lantern program would be eliminated, the pre-license and post-shipment inspections and publicly reports we desperately need to be informed of, would also be gone.

Removing licensing requirements for brokers bears a great risk of increasing trafficking

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

The USA has more firearms than people. What for?

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. As a lifelong teacher, I know that we need more STRINGENT gun safety measures. A ploy to make it easier to sell guns and automatic weapons in particular is grotesque in light of the shootings that occur every few days in this country with ridiculously ineffective regulations on guns. How many more people have to die by gunfire to make the regulations tighter not more lax. Please show some courage and integrity and do not put arms regulations in the hands of the very businesses who profit from gun sales. My question is who thinks this is a good idea, who will profit from it, and why can't we get common sense gun laws in place before the next group of students, workers, first graders, movie goers, people walking down the streets of our nation are slaughtered with guns that have no place in civilian hands?

General Comment

As a constituent concerned with both the security of our nation and the epidemic of gun violence plaguing America, I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department for the following reasons:

Firearms exports, at present, are classified as military hence the reason they are under the regulation of the State Department; and the reason Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns.

The Commerce Department does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

In order to ensure the security of our nation and to minimize gun-related tragedies, I urge the U.S. Department of State to abandon the proposed International Traffic in Arms Regulations: U.S. Munitions List Categories I, II, and III rule.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Changing the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would remove licensing requirements for brokers, increasing the risk of trafficking. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe. Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

Trump wants to make it easier to export guns. Guns are dangerous; they kill people. There should be more controls, not less.

Therefore, I oppose this rule change that would switch the regulation of firearms export from the US State Department to the US Commerce Department.

The US Commerce Department is ill-equipped to handle the responsibility & the huge process.

Please keep the regulations on firearms strict and for the safety of citizens. As a matter of fact please tighten up loopholes. Moving the management of guns to another dept. focused on business is a bad move.

Where is the care and concern for citizen's rights, the right to feel safe in school, the right for those who have been physically threatened to be safe?

Let's get real and keep any regulations in place and increase safeguards where they are needed. For instance longer wait times for purchase while a thorough check is done. Stronger actions in response to online or other kinds of threats made regarding shooting. Let's protect our citizens!

Thanks for listening, Mindy

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. This transfer does almost nothing for the citizen while creating opportunity for industrial profit for the firearms industry and NRA. It also removes Congressional ability to oversee and help regulate fire arms sales.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.

With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

This rule change must be opposed and defeated for the safety of all people both in the US and the world.

The rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

The State Department focuses on safeguarding our nation while the Commerce Department focuses primarily on promoting business.

In the case of firearms, safety should come first and foremost. The potential to move more weapons in the hands of additional dangerous people and regimes must be considered and immediately addressed. This is the first and easiest step to avoid that situation. Oppose the rule change!

So now the NRA is trying to dictate foreign policy for our government and what to sell overseas. That is just how arrogant they are and how much they think they control this administration and Congress. This overreach by an organization that has grown into one that tries to control governments from the local to the national has to be stopped before they become the puppet master of our country. We can't allow an organization whose sole purpose is to put lethal weapons into the hands of as many people as possible to dictate policy to our leaders. Allowing increased exporting of assault weapons overseas just means that more insurgents will be using those weapons against us, our military forces and our allies forces, causing that many more deaths and injuries. Is that what you want to be known for? Allowing those young men to die or be wounded unnecessarily just to benefit one organization's lust for power? I can only hope not.

I strongly oppose this rule that will transfer the sale of arms from the State Department to the Commerce Department. Having lived in the Caribbean for 23 years, I see how the sale of illegal arms has created instability in these countries. If they can buy more legally, we will have created the violent situations that are causing the flow of immigrants to our country. If they cannot come to us, where will the victims of this violence go?

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

The State Department must continue to oversee the sale of arms, and not remove the restrictions above.

Thank you. Mary Kuck

General Comment

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

The NRA is trying to pull another fast one, and we need all engaged and committed gun safety advocates to take the time to read through the details of this alert and take action!

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business).[1] This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. General Comment

Sales of armaments are special. The only purpose of armaments is to kill people. At least, with State in charge of OKing arms sales abroad, it can nix sales to countries and people likely to kill the wrong people with them. This is in part because State knows who they are. So it has at least a tenuous ability to control arms sales likely to contribute to world destabilization.

Commerce has none of this capacity. It is concerned with profits to American companies, I believe. Well, sales of armaments are profitable -- to the armaments corporations. They of course are far less profitable to the resulting foreign dead.

You want more unregulated weapons to kill men, women and children. You want more unregulated weapons to cause death and destruction? You more more unregulated weapons to destabilize the world? You want more unregulated weapons to make it harder for everyone and encourage terrorism?

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

General Comment

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one elsed asked for it or wanted it. The NSSF, the trade group for the gun industry, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobbys influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for household use, they were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. If you go forward with this disastrous policy, I will do everything in my powerpeacefully and democraticallyto hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and clean house.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

Switching firearms sales from DOS to Commerce is a bad idea . It compromises our national security! Of course the DOS should be aware of gun sales! Selling arms is an act of military concern, not trade! Gangs, terrorists and other nefarious organizations profit from the sale of firearms. To treat it as trade is absurd.
Clearly I oppose this change as any patriot should.

I had been under the impression that this administration was against foreign terrorists and foreign criminals who could hurt American citizens. Deregulating weapons sales to foreign buyers makes America less safe.

Part of the mess in Afghanistan was because they had weapons we sold them when we were trying to take out the USSR. Then voila, Taliban!

Because we have legal gun ownership in this country, we have a very active market for guns and American-made weaponry is very high quality. Do we really want it to be easy for those weapons to get in the hands of the next Osama bin Laden?

Oh, I see. Obama killed bin Laden, therefore bin Laden must not have been that bad, and we should encourage more terrorists to continue erasing Obama's legacy. Because MAGA means Make America Vulnerable Again, right?

I am extremely. extremely opposed to moving oversight of export of weapons from the State Department to the Commerce Department. Given the situation in our own country and the situation in Mexico and Central American countries due to lax regulation on firearms in our country, this is exactly the wrong move in that it would enable the acceleration of gun violence. I strongly urge you to resist this move. We are at a time when more effective regulation on firearms is critical. We are not at a point where making more money on guns could possibly be beneficial to anyone other than the manufacturers. Please resist this change!

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

I adamantly oppose switching the regulation and exportation of gun sales from the US Department of State to the Department of Commerce. Arming the world with even more guns will only result in greater societal disasters as the criminal elements become even more powerful and use these weapons to control the law-abiding populations of the world.

We would be exporting the means for mass shootings and daily carnage that we have in this country, merely so the NRA could become more powerful and gun manufacturers could reap more profit.

We must not make this change, for our protection here in the United States and for the good of the world.

Please oppose this change and carefully regulate any exportation of guns and ammunition.

Thank you.

General Comment

I oppose the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

The rule change would make the world a far more dangerous place because:

1. It would eliminate the State Departments Blue Lantern program which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms and enable 3D printing of firearms in the U.S. and around the globe.

Firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

We dont need more guns in the world or in the United States. We need more oversight to make sure the wrong people dont obtain guns and ammunition.

Why are we helping the US gun industry [NRA] with this proposed change? They should not be the ones to benefit at the incredible expense of innocent peoples safety.

This is morally wrong and unethical. Please do not make the rule change. Do not be beholden to the NRA and the gun industry just because they want to fill their pockets with the profits from the sales. Think of the innocent people who would be impacted adversely.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

General Comment

I oppose this rule change that would switch the regulations of firearms export from the US State Department to the US Department of Commerce. Firearm exports are classified as military which is why they are under the regulation of the US State Department so Congress can block large batches of firearms to foreign countries. With the rule change Congress would no longer be automatically notified about sizable weapons sales that it could stop in the name of national security, especially to countries like the Philippines, Turkey, Syria, among others.

The Commerce Department does NOT have the resources to adeequately enforce export controls. Its Bureau of Industry does not have staff everywhere which means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerout agents would face far fewer hurdles in order to obtain large quantities of American guns and ammunition.

Changeing this rule would be a very dangerous and irresponsible change to make with regards to weapons!

Sincerely,
Tenne L Caldwell

I am writing to implore you to prevent the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The United States should be a beacon of light for freedom and justice in the world, not a global supplier of weapons to increase brutality and human suffering. The U.S. Commerce Department should not be responsible for spreading murderous weapons around the world, which will undoubtedly end up being used cruelly against innocent people and likely against Americans as well.

General Comment

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

The rule change would make the world a far more dangerous place:

- It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- It would remove licensing requirements for brokers, increasing the risk of trafficking.
- It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

General Comment

Our family (from Ohio) opposes the proposed rule change to transfer firearms export regulations from the State Department to the Commerce Department. This is unnecessary government fiddling, and dangerous for America. Being driven by business interests (including the NRA and those who profit from arms sales), there is no reason for doing this that would be in the interest of the US or our security -- both national and international. The Commerce Department is ill-equipped to handle arms exports, making the US vulnerable to traffickers, criminals, and terrorists, and poorly or unregulated arms exportation could also lead to instability elsewhere, eventually building negative backlash for our country. (We already see the mass-migration problems formed partly from some of our foreign policies which now we can learn from or anticipate -- this is such a case.) There is simply no reason to make this change (except for profit for a small cadre of people), and many, many reasons not to do so that (which benefit the entire country). In sum, this is reckless and unnecessary, and it would create cost to American taxpayers for infrastructure changes that would be profligate and irresponsible.

I oppose the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The U.S. State Department must remain focused on safeguarding our nation while the U.S. Commerce Department should continue promoting American business. This proposed rule change will have profound impact on our national security as well as the security of nations around the world as new avenues are opened for the worldwide sale of arms. We must work to make our nation and the world safer. This proposed rule will only increase danger here and around the world.

I oppose this rule change that would move the regulation of the export of firearms from the State Department to the Commerce Department. These weapons are military weapons and should remain that way. This move would eliminate the State Department's inspection program and public reporting. It would also remove licensing requirements for brokers which would very likely cause more trafficking, and it would remove the State Department's block on 3D printing of firearms. Congress would also have no oversight ability under this move. Therefore, the world would be less safe. I see this rule change as benefiting gun manufacturers only--there is no other benefit to this change. Keep the regulations where they belong--with the State Department.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

General Comment

I oppose the proposed rule change that would declassify firearms as military and move the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Firearms are weapons, no matter how much organizations may want to call guns sport accessories, and are used to kill people. Moving the regulation of firearms exports from the State Department to the Commerce Department would make firearms exports to dangerous and autocratic regimes easier, remove safeguards that help keep agents like organized crime and terrorist organizations from getting weapons, and further fuel violence that destabilizes countries and causes mass migration. Firearms and weapons exports need more controls and export licensing requirements, not less. Government should not sell out to dangerous business interests that work against public safety interests. I Oppose this proposal.

General Comment

Moving the handling of export licenses of semiautomatic assault weapons and other firearms from the U.S. State Department (to the U.S. Commerce Department is a truly dumb idea. Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

This appers to be a move by the gun manufacturers to sell more guns with less oversight. I'm strongly opposed to this.

I oppose the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. This is a dangerous move that would put people who are focused on profits rather than public safety in charge of regulating massively lethal weapons. American arms could (and most likely would) end up in the hands of terrorists, oppressive governments, drug and firearms traffickers, and other organized criminals, undermining national security and global stability. Please dont let this happen.

General Comment

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business).[1] This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

We already have endured many instances in which our firearms were used by foreign nationals to kill our troops. We have also witnessed our firearms being used by terrorists, drug traffickers and extremist regimes to take innocent lives.

Although they haven't done a stellar job of safeguarding our soldiers or civilian populations, the Department of State must maintain control of international firearms sales, and foreign firearms sales must remain classified as "military" ... the Department of Commerce has no resources to even begin to measure the monumental risks involved in weapons export.

No matter how many people support this change, it must not be made.

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department. This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

Here are more details on how the rule change would make the world a far more dangerous place:

- It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- It would remove licensing requirements for brokers, increasing the risk of trafficking.
- It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Guns are an epidemic. Guns are a daily act of terrorism. Guns are a direct threat to our democracy. These facts require direct and significant action immediately. I am only able to support legislators and the parties they are members of that support aggressive gun regulation legislation.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

I understand there is a proposed rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business).

I absolutely oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The Commerce Department does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. In any case their priority is business.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

Regulation of the sales of assault type guns should stay with the U.S. Dept. of State. These weapons are potential security threats to U.S. citizens and people in other countries. Many of our current Administration's policies and behaviors are antagonizing both our allies and enemies and many would be willing to inflict fear and death.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The move of handling export licenses from the state department to the commerce department does not even make sense. These remain dangerous weapons and need to be regulated by an agency who has the country's safety as its primary mission, vs. that of an agency that has business profits and the economy as its top priority. Do not move the export licenses of these dangerous weapons away from an agency focused on our country's safety as well as the relationship with allies and other countries.

General Comment

I write today to state my opposition to moving the regulation of firearms exports from the State Department to the Commerce Department.

Such change would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and contributes to mass migration.

- It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

- It would remove licensing requirements for brokers, increasing the risk of trafficking.

- It would remove the State Departments block on the 3D printing of firearms, effectively enabling 3D printing of firearms in the U.S. and around the globe.

The State Department has shown itself to be well equipped to perform this strategically important function. Together with Congress, it is in a unique position to thus protect this great nation from harm to national security that can result from large batch firearms sales to foreign countries.

There is nothing broken that could possibly be fixed by the moving the regulation of firearms exports from the State Department to the Commerce Department.

Removing weapon sales from the purview of the State Department leaves this country in danger. We cannot allow a basically unregulated sale of automatic weapons to anywhere in the world. It may make profit for a few arms dealers and the NRA but it damages the security of this nation by opening the doors and making it easier for criminals to buy and sell guns internationally and for terrorists to get their hands on these weapons to be used against us or other governments. This is literally "shooting ourselves in the foot". BE SMART Say NO to the NRA. We need the State Department to regulate and check when and where and how many weapons are moving and the STATE DEPT. may need more adequate funding than it already has for this. Protect this country for real and not with "patriotic words". Thank you.

I received this disturbing message from MomsRising.org in my email. I agree with this organization about this:

"The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business)...] This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

"HERES THE LOW DOWN: Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries...] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

"Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

"The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration."

PLEASE, for the sake of America and the rest of the world, OPPOSE this rule change!

Firearms are dangerous.

They are being used to kill people every day around the world in acts of organized crime, political violence, terrorism, and random acts of violence.

They should be subject to more controls, not less!

I am strongly opposed to the unbridled commercialization of weapons sales. Our national security must not be bypassed by weapons manufacturers and arms dealers intent on boosting their sales wherever they can find buyers. It is bad enough right now, but removing the last vestige of US Dept of State control means uncontrolled flows of military weapons to the highest bidder.

Profits are not the only factor to consider here. Our national security, and security of our citizens around the world, are at stake. Keep international traffic in arms under the control of the U.S. Department of State.

Sincerely,
Linda Novenski

We have rational rules and laws WHO may operate a motor vehicle. There is compelling reason to tighten rules on firearms:
How to purchase, sell, transport lethal weapons is at present not sufficient to keep guns out of the hands of criminals, also
children and adolescents. I may not drive a car because there are valid limits on visual acuity. There is nothing in the law
that requires competency to purchase, own, and carry firearms.

Also we have many regulations or laws governing actions people may take. WHY ARE WEAPONS NOT INCLUDED?

We react to tragedy and crime and then do nothing! Please formulate and pass into law tighter rules who may transport, sell,
store or carry fire arms! Thank you

To the DOS:

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

The rule change would make the world a far more dangerous place:

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration

It would eliminate the State Department's Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
It would remove licensing requirements for brokers, increasing the risk of trafficking.
It would remove the State Department's block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. This rule change would make it far, far easier for weapons traffickers, terrorists, organized crime syndicates, human rights abusers, and others to get their hands on large amounts of firearms, without oversight or the ability to inspect or stop those shipments by Congress. This regulation change amounts to exporting American levels of gun violence to any country in the world, for any reason. Is there nothing this administration wont sell to the highest bidder, including our own national security? Guns are weapons of war, and they should remain the responsibility of the State Department. Otherwise, with the number of enemies were making throughout the world now, those weapons may mostly end up pointed squarely at us.

The NRA will stop at nothing to increase gun sales and further their morbid perception of the 2nd Amendment. This is pure insanity and our government seems to be willing to take the bait and fall into their web of deception. WHY! Hasn't their been enough violence? Haven't their been enough innocent lives lost, including those of children? We're not living in the 1700's where people had their muscats leaning against the wall next to their front door. The interpretation of the 2nd Amendment has been misconstrued to benefit the NRA and gun owners in this country, and now they want it to include other countries. PLEASE! Don't allow this to happen! Don't fall into their web of lies and deceit!

I am opposed to the rule change of switching the regulations on firearms exporting from from the state Department to the Commerce Department. If this change takes place, Congress would no longer be informed of or be able to block large sales of firearms to foreign countries. I feel this would be a threat to our national security. By putting guns in the hands of terrorists, organized crime, and extremist regimes. Sales of firearms being exported to foreign countries need Congressional oversight. Also the Commerce Department does not have the resources to police these sales, therefore endangering all of us.

Control of firearms exports should be in the hands of the US State Dept, NOT the Commerce Dept. The State Dept has the expertise and means to assess security concerns relating to firearms; transferring authority to the Commerce Dept. allows the primary stakeholders -- major gun manufacturers, including companies like Smith and Wesson not even headquartered in the US (!) -- to control export w/o regard for security issues.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

I am also concerned that with the Dept. of Commerce regulating international gun sales that this would remove the State Departments block on the 3D printing of firearms, allowing people like Cody Wilson of Defense Distributed to post online instructions for how to 3D print weapons.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

[4] American Guns Drive the Migrant Crisis That Trump Wants to Fix With a Wall, The Trace, May 25, 2017.

[5] The Trump administration proposes making gun exports easier. Heres how to submit your public comment on this dangerous proposal, Violence Policy Center.

I vehemently oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. I can't think of anything more insane than to remove more regulations from gun sales. To provide other countries with weapons that could increase the kind of mass shootings that we have in this country is IMMORAL.
Please do not allow this . We need to provide a safer world, not a more dangerous world.

I am against a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries.

I oppose this rule change that would switch the regulations of firearms export from the U

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Congress must not be prevented from being automatically informed about sizable weapons sales. Congress must be able to stop sizable weapons sales in the name of national security, even and especially to countries where there are serious human rights concerns, such as the Philippines and Turkey. Depriving Congress of this ability to monitor these sales is a terrible, dangerous idea. It would open the door to firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Allowing this country to do such an unconscionable thing is not only unamerican, it would directly contribute to making the world a more dangerous place as well as inviting security breaches here at home.

General Comment

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

General Comment

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Please do not change the rules. Thank you for your consideration

We need to be able to control the sale of "military type" guns. Commerce is ot the correct way. They are only looking at the trade figures and not security.

General Comment

Changing the rules concerning guns from State Dept to Commerce Dept seems to be misguided. The stated reason is cost savings but I am concerned about oversight. Categorizing guns as military makes sense. We have too many guns getting into the hands of bad actors as it is. Keep guns under the auspices of the State Dept.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

I am writing in opposition to the rule that would move the regulation of firearms export from the US State Department to the US Commerce Department. This change would result in increased weapons both domestically and globally, which would benefit no one except the gun manufacturers, oppressive regimes, terrorists, and criminals. It would eliminate safeguards that are absolutely necessary for having some control over terrorism and oppression. The Trump Administration claims that it wants to eliminate terrorism, but I believe that this change would aid in the opposite result: terrorism in the US and around the world would increase while only terrorists, oppressive regimes, criminals, and gun manufacturers would profit. This is not the direction I would like to see the US, or the world, go.

I am writing to vehemently protest changing the rule that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business).

With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. And, the Commerce Department and its Bureau of Industry and Security just do not have the resources or reach to adequately enforce export controls. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Switching the regulation of firearms exports to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration, as well as:

1. Eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]
2. Remove licensing requirements for brokers, increasing the risk of trafficking.[6]
3. Remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Making this change would be immoral and dangerous. Please don't let it happen!!

The NRA is pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

This is an extremely dangerous path to take. It is not the job of the US government to help the NRA and weapons manufacturers enrich themselves. I urge you in the strongest terms to reject this rule change.

Changing the laws to minimize the regulation of gun sales around the world is morally wrong. Many countries have very strict laws regarding the ownership of firearms by their citizens. Our gun manufacturers and the NRA will benefit exponentially by selling even more firearms to groups and individuals who want to topple governments, suppress voting rights, and the rights of citizens.

The USA has over 38,000 gun related deaths every year. That number represents the easy flow of firearms to criminals and suicides of too many individuals.

As a teacher, I worked with students to settle conflicts through discussions and active listening. Firearms change those dynamics into an I win, you lose mentality.

We owe it to the 68% of our citizens who do not own guns to say, We hear you and you, as well as, other inhabitants of our world need to be safe from gun violence.

Our legislators have a duty to protect everyone in this country through laws that are not bought and paid for by lobbyists and secret money. They need to be written to reflect the safety and concerns of the majority of our population.

International weapons sales are currently handled by the right federal agency, one that takes true national security into account in their decisions. The business class HATES the very idea that governments and government agencies have the power to limit or prohibit any of their narrowly-defined profit-seeking obsessions for any reason, even good or even inarguable ones. Weapons are not just another commodity; they are intended for one purpose only: destruction of human life. This can be allowed, definitely not encouraged, unless there are good reasons for deadly armaments. But the Commerce Dept. cares about none of that. It's just money for them, and they want as much as they can get, by whatever means they can arrange, and somehow they think the chickens will never come home to roost. This has to be handled by an agency with a broader and wiser approach. That's State, not Commerce.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Specifically because it would:

1. eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and makes these reports publicly available;
2. remove licensing requirements for brokers, increasing the risk of trafficking; and
3. remove the State Departments block on the 3D printing of firearms.

All of the above controls are necessary to keep the World safer. Thank you.

General Comment

I'm a citizen concerned about this proposed rule change. I believe it would open new floodgates for arms sales internationally, with huge implications for our national security. I am opposed to the fact that this rule change would consider semi-automatic assault rifles as non-military, which makes no sense, as military use is their primary function by design, and that it would eliminate Congressional oversight for important gun export deals, which would limit Congress's ability to comment on related human rights concerns, and remove Congress's proper role. As a taxpayer, it also offends me that this proposed rule change shifts the cost of processing licenses from gun manufacturers to taxpayers. Even at present, the Commerce Department doesn't have the resources to enforce export controls. Please prevent this rule change, which would inevitably lead to increased terrorism and violence globally.

General Comment

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

This rule change is a clear danger to our national security and should not be implemented.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

General Comment

I suspect you already know this is a bullshit move, and bad move, not in the public interest - the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

I oppose this rule change. It would be dangerous to allow the US Dept of Commerce to regulate fire arms export. Fire arms are classified as military and should be under the control of the State Dept. As of now Congress can block large sales of firearms to foreign countries. We need to keep State Dept's Blue Lantern program in place since 1940. It would be dangerous to allow 3D printing of firearms which State Dept. now blocks.

This is a comment of opposition to this rule. Any law that has a net reduction in regulatory burden on guns sales is wrong and dangerous. The NRA supports this for no other reason than more profits for gun manufactures, also know as their base. This rule would make it easier for people of other countries to access weapons of war. We need to stop this.

I urge the Commerce and State Departments to oppose relaxing rules that would make it easier for U.S. firearm manufacturers to export assault rifles and other guns, with less oversight and accountability. With gun violence killing 1,000 people around the world every day, we should be making it harder, not easier, to export U.S. made weapons of war.

If we want to lessen the number of people applying for refugee status, we should be working to make their countries safer, not flooding them with more weapons of war. We should be working to make other countries safer and more stable, not creating more violence and instability by selling them more firearms.

I am strongly opposed to the National Rifle Association's efforts to move the handling of export licenses from the U.S. State Department to the U.S. Commerce Department, making it easier for U.S. gun manufacturers to sell weaponry to other countries.

The last thing other countries need is for their nations to become lawless, dangerous, gun-happy places for the citizens to live, much like this country has become. The NRA should be labeled a terrorist organization and should be outlawed and shut down. It has become almost as dangerous as the Taliban and Al-Qaida in the Middle East!

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less.

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business).[1] This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security. I oppose this rule change.

I strongly urge the Commerce and State Departments to oppose relaxing rules that would make it easier for U.S. firearm manufacturers to export assault rifles and other guns, with less oversight and accountability. With gun violence killing 1,000 people around the world every day, we should be making it harder, not easier, to export U.S. made weapons of war. Please do what is for the safety of the common good. Thank you

For our national and global security, please keep firearm trade regulations within the State Department's jurisdiction. Leaving this matter in the hands of the Commerce Department would only increase the likelihood of weapons falling into the wrong hands.

Please do NOT move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department. If allowed to be exported these weapons can be used against the US and other friendly governments by terrorist and the mentally deranged.

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The Commerce Department does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

I strongly efforts to shift the responsibility for the oversight of the export assault rifles and other guns from the State Departments to the Commerce Department as that will result in the relaxation of rules making it easier for U.S. firearm manufacturers to export assault rifles and other guns with less oversight and accountability. With gun violence killing 1,000 people around the world every day, we should be making it harder, not easier, to export U.S. made weapons of war. This action would result in the "export" also of our plague of gun violence that exists in our country today! Guns and other deadly weapons are already managing to get our of the US illegally through the lack of background checks at gun shows. We should not make it Legal to sell weapons overseas just to keep sales up for gun manufacturers!

General Comment

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one elsed asked for it or wanted it. The NSSF, the trade group for the gun industry, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobbys influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for household use, they were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. If you go forward with this disastrous policy, I will do everything in my powerpeacefully and democraticallyto hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and clean house.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

Exported American arms and ammunition could potentially find their way as the instruments of death to American soldiers, allies, or even tourists. Thus, rules for such exports should never be based on goals of commerce, i.e. Department of Commerce. Exports of firearms must remain under the jurisdiction of State.

General Comment

I am a retired nurse-midwife, very concerned about the public health impacts in the U.S. and globally of too many guns in the hands of dangerous people. Let's not export our lethal problem to other countries.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migrations.

Keep the regulation in the State Department with stronger safeguards and a history of trained personnel to enforce them.

The N.R.A. is becoming a toxic brand so they are looking to develop a new money stream for U.S. guns and ammunition manufacturers. Do not be cowed by their pressure.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

Please reject the proposed rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Firearms have caused the deaths of several people I knew, in several different incidents. Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

Switching regulation of gun exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration, such as our country is currently experiencing on our southern border.

To protect human safety and societal stability, please reject this rule change.

Thank you.

The weapons rule change could make the world more dangerous.

For starters, it would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

Don't do it!

It would remove licensing requirements for brokers, increasing the risk of illegal trafficking.

Don't do it!

It would remove the State Departments block on the 3D printing of firearms.

Don't do it!

When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon.

The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Don't do it!

We are watching.

I oppose the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. In this age of international terrorism, it is crucial that we have stringent oversight of arms sales to overseas (as well as domestic) entities. The mission of the Department of Commerce is commerce, not safety or security.

I would certainly be opposed to this change. Any exporting of guns should remain under the oversight of the State Dept.

I think just as a national security we would want that. Once they are not watching anymore, who knows how many guns would exit this country and where would they be going to?

We might easily be responsible for killing our own, fighting rebels and terrorist that would be able to exploit this change.

This is just less regulation on a gun problem we already have and should not be changed.

Just say no.

thank you

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business).[1] This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

I am writing because I am opposed to the proposed change in regulation concerning the export of firearms which would seriously increase the dangers to this country . These are my concerns:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

I hope you will take these issues into consideration and not make changes which can so dangerously impact national security.

Yours truly,
Joan C. Farber, Ph.D.

If the NRA is permitted to take themselves out of the arena of the USDS, it will become the purveyor of death worldwide. The US already is exerting a terrible pressure on human life with the pressure of its military in so very many countries. The NRA sales would further undermine the sovereignty and health of these nations.

Please make me proud again, to be a citizen (my ancestors were early immigrants to this new world) of the USA. Do not let the NRA have its way in this.

My great grandfather, an immigrant from Nauborn, Prussia, was conscripted into the Union Army of the Civil War. He died of disease in that war, leaving his immigrant wife a widow and his four small children fatherless. He had come to this country to find food, escape militarism and killing.

There is no reason to allow the NRA to place weaponsso easily into the hands of human beings in other countries where people long for a good life. It would be the exporting of a culture of death that we have allowed to grow here. This culture shocks me daily.

Sincerely,
Sylvia Hopkins

General Comment

Switching the regulation of firearms exports from the State Department to the Commerce Department would make it easier for the export of firearms to oppressive regimes; it would remove safeguards that help keep organized crime and terrorist organizations from obtaining weapons; it would increase the kind of violence that destabilizes countries and causes mass migration, which is already occurring at alarming rates due to wars, and criminal gang activity.

The rule change would eliminate the State Departments Blue Lantern program, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. This would be devastating to civilian populations.

The rule change would remove: (1) the licensing requirements for brokers, expanding the risk of trafficking; (2) the blocking ability of the State Department on the 3D printing of firearms. Without this capability, the State Department would lose an important tool for charging individuals, who use 3D printers to print firearms, with violating arms export laws. The rule switch would remove this block, and expose civilians everywhere to an exponentially larger risk of dying from the expanded use of these lethal weapons.

Please do NOT make this rule change, which will endanger innocent people's lives worldwide.

I oppose this or any other rule change that would transfer authority to grant licenses for the export of firearms from the U.S. State Department to the U.S. Commerce Department.

Firearms in international trade are used as weapons of war. Neither the US State Department, nor the US Commerce Department should not be in the business of promoting War.

The United States should not be exporting our problems with automatic and semi-automatic weapons to the rest of the world.

As a concerned American and member of the world's human race, I urge you to do whatever is necessary to keep control of the international sale of American firearms. To move it to the Commerce Department flips the focus from safety and peace to making money, and we all know that with money as a motivator, it's much easier for deals to be made that may not be in our country's best interests.

Thank you for standing up for humanity rather than for money-making.

I am writing to express my STRONG OPPOSITION to this plan.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

Submit comments now to the State Department and the Commerce Department opposing the rule change.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

To Whom It Concerns:

I oppose this rule switching the responsibility for regulatory oversight of firearms exports from the U.S. State Department to the U.S. Commerce Department. Diplomacy not weapons should be our chief export.

Imagine if that were so: if we retained credibility to solve through diplomacy conflicts around the world. Not only have we been ceding that ground, but now will we increase our presence through even more weaponry? Is my beloved country becoming an evil empire? Please, please, please do not allow this change!

Patriotically yours,

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The rule change would make the world a far more dangerous place:

--It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

--It would remove licensing requirements for brokers, increasing the risk of trafficking.\

--It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe

I strongly oppose the rule change that would move the handling of export licenses of semiautomatic weapons and other weapons from the U.S.State Department to the Commerce Department.

This rule change would seriously undercut or even eliminate congressional oversight of weapons sales or shipments.

This is totally unacceptable!

The ability of our representatives to stop the sale of large numbers of dangerous weapons to countries who are known abusers of human rights is an absolute necessity!

This rule change would TRULY endanger our national security.

The Commerce Department does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would remove licensing requirements for brokers, increasing the risk of trafficking. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

General Comment

I oppose the proposed rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

I believe firearms exports should stay under the regulation of the State Department and that Congress should have the power to block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it might see reason to stop in the name of national security, or to prohibit sales to countries where there are serious human rights concerns.

Moreover, the Commerce Department does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

This proposed change would make our country less safe by fueling terrorism and organized crime around the world.

Please keep firearms exports under the regulation of the State Department.

Thank You,

Eve Luckring

I strongly oppose switching the regulation of firearm exports from the State Department to the Commerce Department!

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

We need FEWER guns in the world, not MORE!

General Comment

The words below, taken from Defense News dot com, echo my own views on this matter. Please take these words under consideration.

There are five key dangers of shifting oversight of firearms exports to the Commerce Department.

First, there is an increased risk of exports to unauthorized end users and conflict zones. Under the Commerce Department system, companies can generally use several broad license exemptions to export military equipment without U.S. government approval. When the U.S. government shifts oversight of firearms exports to companies, it loses the ability to identify key warning signs, including risky middlemen, unusual routes and mismatched weapons systems, of a possible diversion of U.S. guns to terrorists, criminals or conflict zones. Without U.S. oversight, the government also couldnt stop the sale of firearms to foreign security force units accused of serious human rights violations or corruption.

Second, a shift to the Commerce Department could compromise the United States ability to investigate and prosecute arms smugglers. The Trump administrations proposal would likely eliminate the current requirement that individuals receive government approval before attempting to broker a deal to non-NATO countries for firearms controlled by the Commerce Department. The proposal might also remove the requirement that companies first register with the U.S. government before engaging in arms exports, which U.S. law enforcement has used to build investigations against illegal arms traffickers. Furthermore, the proposal could create greater legal ambiguity about restrictions on firearms exports and, thus, impede U.S. law enforcements efforts to prosecute cases of illegal arms trafficking. Indeed, if an arms exporter can show that a reasonable person would be confused by U.S. regulations, the illegal exporter could escape prosecution.

Third, the proposal risks losing key legal restrictions on dangerous arms transfers. Commerce Department regulations, unlike the State Departments, are not tied to all federal laws that regulate security assistance, including the commercial export of defense articles to foreign governments that support terrorism, violate internationally recognized human rights norms or interfere with humanitarian operations as well as country-specific controls imposed on nations of concern, such as China. A shift to

the Commerce Department would likely complicate, if not end, State Department reviews of a recipient's human rights violations, as the State Department bureau in charge of human rights may face greater difficulties in pressing for restraint on risky firearms exports. Such a shift would thereby dilute the State Departments ability to prevent high-risk transfers.

Fourth, the Trump proposal risks eroding global norms on firearms exports. Over the past two decades, through bilateral and multilateral agreements, the United States has successfully encouraged governments around the world to adopt better laws and policies to stop irresponsible and illegal arms transfers. Many of these agreements note the need to review export licenses on a case-by-case basis, highlight the importance of brokering registration and licensing and contain other key controls. If the United States decides to reduce or remove some of these controls, many other countries may choose to do so as well, particularly if it allows them to better compete with the United States.

Finally, a shift would likely result in less transparency in arms sales. The proposal could eliminate both Congresss and the publics view of U.S. firearms sales authorizations and deliveries around the world because the Commerce Departments annual reports cover only about 20 countries. Furthermore, there are no public end-use reports on arms exports authorized by the Commerce Department such as those for exports authorized by the State Department. The reports are useful to identify key trafficking patterns that can help avoid risky arms transfers.

Sincerely,

David Forbes

Dear Sir or Madam,

I am writing to protest the proposed transfer of gun sales and supervision of the overseas sales of guns from the State Department to the Commerce Department. With the amount of gun violence piling up in the USA, the last thing necessary is more liberal treatment of gun sales. Gun manufacturers and sales considerations should remain under the control of congress with State department oversight.

General Comment

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business).[1] This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Here are more details on how the rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

I oppose this change. Thank you for taking action to help make our families, loved ones, our country and our world a safer place.

We have learned that the NRA and gun manufacturers are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

We oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

This rule change would make the world a far more dangerous place for these reasons, among others:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

All of which leads us to urge that this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department
be OPPOSED!

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business).[1] This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

General Comment

I strongly oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security. Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Please leave these regulations under the authority of the State Department - the proposed change benefits the NRA and arms profiteers, and no one else.

I m writing because I am against moving the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department which is focused on safeguarding our nation, to the U.S. Commerce Department which is focused on promoting American business.

This transfer of authority would open floodgates for arms sales internationally, with serious implications for our national security.

- It would eliminate the State Departments Blue Lantern program (in place since 1940) which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- It would also remove licensing requirements for brokers, increasing the risk of trafficking.
- And it would remove the State Departments block on the 3D printing of firearms.

As an example to the last comment: When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

We all know that firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations.

This is why fireamrs should be subject to more controls, not less!

I oppose this rule change that would switch the regulations of firearms exports from the U.S. State Department to the U.S. Commerce Department. There are safety measures in place that would require licenses that are meant to keep arms transfers, including the blocking of 3D printing of arms, carefully monitored. KEEP THESE RULES IN PLACE AND UNDER THE STATE DEPT.

Commerce does not have the resources in personnel to oversee and keep arms from ending up in the hands of terrorists, arms traffickers and other dangerous entities. Our nation is safer with arms sales being under the State Dept. The safety of our nation is more critical than profits.

I strongly Oppose a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

The rule change would make the world a far more dangerous place.

Common sense gun safety measures, like numerous other issues (climate change, food labeling, immigration reform, prison reform, education reform, short-term lending regulation, healthcare reform, banking regulation, opioid regulation) remains a vexing problem primarily due to corporations' ability to curry favor with elected officials. The corrupting influence of money in our political system is undermining our democratic traditions and discouraging Americans from voting and/or running for office. This ominous development may well end our experiment in representative democracy unless we alter this decades-long trend. For the sake of the republic, we must amend the US Constitution to state that corporations are not people (and do not have constitutional rights) and money is not speech (and thus can be regulated by state and/or federal campaign finance laws). Short of accomplishing this, no other reform of significance will be achieved. The moneyed interests will turn any reform to their benefit, often at the expense of the nation as a whole.

To Whom It May Concern,

I am extremely concerned about the proposed changes in the regulations for guns.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

We need safe and thoughtful gun regulations...not exporting guns for a less secure and stable world.

Please do not transfer the responsibilities for gun exports outside the US from the US State Department to the US Commerce Department.

Individual company's goals are to increase sales and dividends for shareholder, not worry if they are selling deadly weapons to terrorist nations and organizations.

The US State Department is much better equipped to process and regulate the export of semi-automatic guns and all lethal weapons than the US Commerce Department.

Keep American's safe now and in the future. We do not want to be fighting terrorist groups that use US made guns.

General Comment

I oppose this rule change that would switch the regulations for firearms export from the U.S. State Department to the U.S. Commerce Department. This is a question of national security, as Commerce lacks the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere, which means firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The last thing we need is to supply arms to foreign nations. All this talk about securing our borders is meaningless when arms are made available to anyone anywhere. ISIS already loves coming here to restock their arsenals--this would make even travel unnecessary to them. The NRA cares only about making money, not about freedom, democracy or security. The U.S. Department of State is the proper place to decide where weapons can safely be shared.

General Comment

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

It would eliminate the State Department's Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Department's block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

None of this will make US citizens safer from gun violence.

My point of view is that there should not be any changes to control over international sales of weapons of death. The state department has done an admiral job of protecting our interests world wide.

The transfer of these responsibilities to the commerce department might vacillate exporting of more death around the world. In effect we would be making it easier to provide the means to create more death

some of that death will be the death of more Americans and that is certainly not we want nor is it what we want to be known for.

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one else asked for it or wanted it. The NSSF, the trade group for the gun industry, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobbys influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for household use, they were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. If you go forward with this disastrous policy, I will do everything in my powerpeacefully and democraticallyto hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and clean house.

I'm a teacher. I was teaching 30 minutes away from Newtown, CT when the Sandy Hook massacre occurred. I had students who knew murdered first graders. There was an active shooter situation near a college campus 30 minutes from my current house this week in which a New York State Trooper was killed. The gun violence in this country needs to be reigned in. In the interests of National Security, arms regulations must be regulated by a department interested in national security, NOT commerce. Please, we are failing to protect our citizens from firearms badly enough as it is.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns. Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

1. It would eliminate the State Department's Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Department's block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.
4. Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

This change would only serve two purposes: to further the NRA's agenda to enrich the gun industry, and to further Putin's plan to destabilize the world!

There is NO sane reason for making this change!

We most definitely oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. This is only in the best interest of the NRA. How much power is enough? We need gun control legislation to support the safety of our children, families and law abiding citizens! Lets use some common sense!!!

To change fire arms sales from the Dept. of State to the Dept. of Commerce is to place the security of the United States at risk. It places all Americans at risk from foreign entities who would be able to purchase military grade weapons at will and use them against us. Do not let this happen.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. You can also copy and paste in other parts of this email, too, in order to make your case.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

I oppose in the strongest voice this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Our world is already in an unsafe and perilous state with rampant uncontrolled gun violence here and abroad. Allow the State Dept to continue its authority to oversee the sale and transfer of firearms. Do not transfer this authority to the Dept of Commerce that has no experience with national security and does not have adequate staff to enforce these new functions. This rule change would hugely threaten the safety and security of our own country as well as internationally.

To Whom It May Concern,

I am a mother, a clinical Social Worker who is ardently concerned about the importance of gun control as a way to maintain a civilized society and protect human life from the use of guns to harm others.

Currently, I am wriing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because this rule change treats semiautomatic assault rifles as non-military." This is despite the fact that U.S troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts and the civilian possession of such weapons is proffibited in many countries. The proposed rule also" eliminates Congressional oversight for important gun export deal transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S and exports abroad by removing the block on 3 D printing of firearms.

This proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction and human rights, to an agency with a mission to promote trade and lacks the resources to adequately enforce export controls.

Keep The U.S State Department in charge and control of export license oversight for firearms.

Thank you.

Henriet Nadler-Cohen

General Comment

Weapons manufacturers want to sell guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business).[1] This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

Right now, firearms exports are classified as "military." This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Department's Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Department's block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

To whom it my concern:

The rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

General Comment

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

I strongly oppose this proposed rule.

It would be a colossal mistake to treat firearms, particularly semi-automatic weapons, as commodity for export. Providing lethal weapons abroad requires thoughtful review and followup that should remain with the State Department. Let's not export violence to the world in the name of making a buck for weapons manufacturers.

Please do not switch the oversight of the sale of hand weapons from the Dept. of State to the Dept. of Commerce. Our nation has the highest number of deaths committed by regular citizens with personal guns than anyplace else in the world. We should not want this happening anyplace else in the world since we already know that our country has not wanted to or has not been able to deter the number of deaths in this country via personal guns. We should not do anything that would make this a problem or a worse problem anyplace else in the world. The Dept. of Commerce can be pressured by large businesses and might let that pressure by gun manufacturers to influence them to relax rules. We have more than enough deaths every year than we should because of guns. We should not export that problem anyplace. God only can help us if we export this problem to the rest of the world.

General Comment

I oppose moving international traffic in arms regulations from the State Department to the Commerce Department because the Blue Lantern program of the State Department is highly effective at preventing sale of firearms to countries with human rights violations.

State Department also blocks exportation of firearms to countries and organized crime groups that pose a security threat to the US. The Department of Commerce lacks experienced professionals capable of determining which potential recipient countries pose a security threat to the US.

We must aim for world peace, not maximizing gun exports to enrich US arms manufacturers.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

HERES THE LOW DOWN: Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

Submit comments now to the State Department and the Commerce Department opposing the rule change.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

Thank you for taking action to help make our country and our world a safer place. #VeteransForPeace

I urge the Commerce and State Departments to oppose relaxing rules that would make it easier for U.S. firearm manufacturers to export assault rifles and other guns, with less oversight and accountability. With gun violence killing 1,000 people around the world every day, we should be making it harder, not easier, to export U.S. made weapons of war.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would remove licensing requirements for brokers, increasing the risk of trafficking. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe

My name is Virginia L Keith, I live at 4531 14th Ave S, in Minneapolis, Minnesota 55407

I am opposed to the rule change that would make it easier to sell guns around the world without adequate oversight. Also 3 D printing of guns rule should NOT be changed. We are a wash in guns I know the GOP thinks we need more guns but that is just wrong. We need to keep the oversights we now have and not to change them for a quick buck.

I strongly oppose changing the control of arms exports from the State Department to the Commerce Department. This would deprive Congress and the State Department of the ability to prevent U.S. gun manufacturers from arming dictators, rebels, civil wars, criminals, and enemy regimes around the world, all in the name of profit.

I oppose change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

The rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder, Cody Wilson, posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws. They were able to do this because his open-source posting made it possible for anyone with access to a 3D printer, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

For these reasons, I believe this is an irresponsible rule change.

To whom it may concern,

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

So please keep gun sales the way are, under the State Department.

A concerned Navy Combat Veteran!

Sincerely,
Ken O'Connell

I vote no against this. Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would remove licensing requirements for brokers, increasing the risk of trafficking, and it would remove the State Departments block on the 3D printing of firearms.

When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Please reconsider your stance. It's dangerous enough here as it is.

General Comment

I strongly oppose any change in regulation of firearms from the State Department to the Commerce Department. There are so many countries and non-state actors that would take advantage of any laxity in this regulation and this could create more violence, chaos, repression in countries around the world. There is already enough violence in the world without making it even easier to enact it.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

All of the effects below would be highly detrimental to safety around the world and ultimately, hurtful as well for U.S. citizens:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

I am totally against changing the supervision of gun and munition sales to international buyers from the State Department to the Commerce Department. The sale of these weapons of war should not be governed by people only interested in the fostering of commerce. These are not typical exports. These exports kill people. Their governance should be with the department that is more concerned with maintaining peace, rather than with the department that is concerned primarily with fostering profit.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Another terrible idea put forward by this administration to promote more war and terrorism around the world. Do not try and pull the wool over Americans' eyes, this move jeopardizes our safety and futures further.

The proposed rule changes that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department is a NO BRAINER! This rule change must have been dreamed up by the NRA and gun manufacturers! What does the Commerce Dept. try to do? SELL MORE! Who are the people who normally get guns, war lords, gangsters, military juntas, etc.?! Trump and his Republicans cronies are always talking about the national security but these rule changes would put more lethal weapons into the wrong hands and make us less safe.

I was thinking how can anyone come up with such a crazy idea, then realize how strong the NRA and its lobbyist are. This rule change will make the world a totally UNSAFE PLACE. This rule change should NOT be entertained or applied!

No, this change in arms regulations must not be approved. For gunsmiths to have to fill out a little paperwork and pay fees is merely inconvenient and a small price to pay to keep military style weapons out of the hands of terrorists and crazies who like to shoot up schools and public places. We need MORE regulation, not less.

I believe the U.S. should strictly regulate the sale of firearms to other countries. The State Department is more appropriate than Commerce to oversee the sales. Further, the U.S. government should not encourage sales of firearms to other countries. The gun industry has shown that it will go to extreme lengths to promote firearm sales, without consideration for the societal impacts of doing so.

I oppose this rule change that would switch the regulation of firearms export from the U.S. State Department to the U.S. Commerce Department. If this change is made, Congress would no longer be informed of large arms sales or be able to block them. Military-style weapons, such as semiautomatic assault weapons and other powerful firearms, could be exported to dangerous foreign countries, threatening our national security. Furthermore, the Commerce Department does not have the resources to adequately enforce export controls, so firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

This change would also eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would remove licensing requirements for brokers, increasing the risk of trafficking. And it would remove the State Departments block on the 3D printing of firearms, allowing anyone to make unlimited numbers of weapons.

This administration has claimed that our national security is risked by immigrants at our borders, but this change -- initiated only for motives of profit -- would have the effect of increasing civil wars and gang violence in foreign countries that would bring more people seeking asylum to our borders. Our non-stop wars on terrorism would be made more difficult and costly if our enemies can purchase military-style weapons with impunity.

For all these reasons, this change of regulatory control would be serving the arms makers, but hurting the country as a whole. I oppose it and I hope you will too.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

This rule change would make the world a far more dangerous place:

- It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[1]
- It would remove licensing requirements for brokers, increasing the risk of trafficking.[2]
- It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[3]

With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

General Comment

With this rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

The idea of moving the regulation of firearms exports from the state department to the commerce department is truly a bad idea. To cite just a few reasons it would make it easier for dictatorial regimes, organized crime and terrorists to obtain guns in large quantities. It would remove the state department block on the 3D printing of firearms which would make things even worse. It would allow for the destabilization of countries with massive unrest and countless deaths. Please, in the name of peace and sanity do not allow this to happen.

General Comment

I OPPOSE removing firearm exports from DOS and putting them under Commerce Dept. This change would be extremely bad for national security, for the U.S., and for the international community. Removing arms exports from DOS will make it much easier for arms traffickers, organized crime, terrorist organizations, and rogue states to obtain large quantities of American guns and ammunition. There is no American interest that is served by such a move, as the beneficiaries would seem to be limited to criminals, arms manufacturers, and the NRA.

Removing arms exports from DOS control and oversight would eliminate the Blue Latern program of inspections and reporting;

eliminate broker licensing requirements, which will increase trafficking; eliminate the DOS block on open source instructions for 3D firearm printing; eliminate the ability of Congress to block, in the name of national security, large batch firearm sales to foreign nations; and significantly reduce our ability to enforce firearms exports by putting it in an agency that does not have the ability, experience, or worldwide staff and resources to adequately perform this critical function.

Please, in the immediate and long-term interest of the national security of our country, do NOT move the regulation of firearm exports from DOS to Commerce.

General Comment

Dear Regulatory Assistant:

This letter is in opposition to letting the NRA populate the WORLD with arms, especially military arms. The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They (the NRA) are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business).[1] Trump move would make it easier for U.S. gun manufacturers to export firearms, The Washington Times, May 14, 2018.]

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. In a corresponding article, Trump wants to make foreign arms sales easier, The Boston Globe, June 23, 2018, this spells disaster because Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. We've already seen what massive damage the AR-15 does in America, especially killing innocent people in schools. WE DON'T NEED THE NRA AND THE UNITED STATES DELIVERING MILITARY OR OTHER GUNS AND AMMUNITION BEING SOLD TO THOSE WHO CAN HARM AND KILL INNOCENT PEOPLE FOR GREEDY PURPOSES.

Thank you for listening!

I oppose the rule change that would switch the regulations of firearms export -- including semiautomatic assault weapons and other powerful firearms -- from the U.S. State Department to the U.S. Commerce Department. This transfer of authority would open the floodgates for arms sales internationally, which will seriously undermine our national security when they flow back through our borders illegally and without background checks. The interests of the members of the gun lobby should never be more important than the safety of the American homeland.

General Comment

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. This is ridiculous and we need to stop pretending that our government is powerless to improve this situation. We know better. It is time to do better!

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The State Department can better control the global flow of firearms from the US than Commerce, which does not have the personnel or the bureaucracy to do an effective job. This is simply a sop to the firearm industry promoted by the NRA. Do not change the status quo.

The rule belongs at the State Department. It is a national security issue. Without it we have no way of telling who is buying, transferring large amounts of arms from the US and to whom we are selling to. I thought this was addressed in the 1980s, when Reagan was selling arms to Khomeini and the proceeds were used to fund the Nicaraguan Contras.

The NRA has put so many roadblocks in the way, we can't even control who has how many guns, if they should have access to them or not, who is buying them online or at gun shows and if they are on terrorist watch lists.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Dear sirs/Madams,

It has been brought to my attention that the NRA and gun manufacturers are lobbying for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other firearms from the U.S. State Department to the U.S. Commerce Department. I strongly disagree with this rule change. This would allow for the focusing of arms sales on economics not on safeguarding persons and country. This transfer of authority would have serious negative implications for our national security.

Guns are a nuisance and a danger in our society. It even says in the Constitution that they should be 'well-regulated' and yet here we: guns for everyone and their Aunt Tillie. This is nuts. Regulate these enablers of harm, these vehicles of hate. The members of the NRA may be buried up to their ears in guns and bullets, but they are vastly out-numbered by all of us other citizens who don't feel the need to carry a gun when we go for our coffee - because we're adults who don't need security blankets to carry on our daily affairs.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, and terrorism, and human rights violations. They should be subject to more not less regulation. Please leave the authority to oversee international arms sales with the State Department. It will help make our country and our world a safer place.

I know the devastation that firearms cause. As the designer of the Massachusetts Memorial to Homicide Victims, The Garden of Peace, I have listened to the stories of heartbreak experienced by parents who have lost children to gun violence. Don't expose the rest of the world to the horror of mass shootings; school shootings and church shootings, concert shootings, and nightclub shootings and all the other daily violence that we experience in this country! Please.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

"I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Safeguarding our nation to putting it up for sale is UnAmerican. This new ruling transfers the authority from the US State Department whose focus is safeguarding our nation to the US Commerce Department whose focus is promoting business. Of course, the NRA and gun manufacturers want this as it will open new floodgates for arms sales internationally with serious implications for our national security. Thus democracy is sabotaged for both our country and we the people--all for the sake of fulfilling corporate and individualistic self interests.

The following are details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

Kindly refrain from supporting this ruling as it will not serve the common good nor the values and culture that formed the United States of America.

Respectfully yours,

General Comment

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal

agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of

pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody

Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with

violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer,

anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of

firearms in the U.S. and around the globe.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political

violence, terrorism, and human rights violations. They should be subject to more controls, not less!

General Comment

I am opposed to this rule change because I feel it would threaten our national security and ultimately put more weapons in the hands of terrorists who would use them against us. International sales of large quantities of firearms should remain under the control of the State Department. Congress should remain automatically informed about sizable weapons sales that it could stop in the name of national security. It is important that this Congressional power remain as the Commerce Department does not have the resources to adequately enforce export controls. Firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition, which could ultimately be used against our own military or our own civilians. Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. Firearms are a dangerous threat to civilized society. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less.

General Comment

I VERY STRONGLY oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

As you know, currently firearms exports are classified as military and therefore are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. But with the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

We are having more than enough problems, especially with automatic weapons, and we definitely DO NOT need to spread that problem around the world. It sounds like a change for NRA GREED wanting to get more sales with no concern for anyone's welfare.

Firearm exports must stay in the realm of the State Department and not be transferred to Commerce. The Commerce Department is not equipped to handle these exports which are military in nature. The State Department already has what it needs to control this important activity. Changing it to Commerce is not only a waste of resources but reduces the safety of firearm export

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

This rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

I strongly oppose this rule change.

Weapons kill people here and everywhere they are sold around the world. It is time to support nonviolent solutions in areas of conflict and there are organizations ready to do this work (Nonviolent Peaceforce). Violence from weapons causes more violence and much more death and destruction.

I oppose the proposed gun exports rule change for the following reasons:

It treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

It eliminates Congressional oversight for important gun export deals.

It transfers the cost of processing licenses from gun manufacturers to taxpayers.

It removes statutory license requirements for brokers, increasing risk of trafficking.

It reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

It enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

It reduces transparency and reporting on gun exports.

It transfers gun export licensing from agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

The rule change would make the world a far more dangerous place:

****It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.**

****It would remove licensing requirements for brokers, increasing the risk of trafficking.**

****It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.**

Please do the needful and right thing and keep this with the State Department.

Thank you for your consideration.

This is truly outrageous. Neither gun manufacturers, nor the president should have this power. What is happening to our country? It feels like we are becoming a dictatorship and a fascist one at that. This certainly looks like the merger of corporation and state, a large part of the definition of fascism. Our country spreading weapons around the world does not help people or the environment. Congress needs to declare wars and needs to decide on weapons sales.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

The sale of weapons to other countries (or entities therein) should be in a manner which respects said country's laws. It should

be done in a manner which supports, not aggravates, our foreign policy, and therefore oversight belongs with the State Dept.

To shift this responsibility to the Commerce Dept. is to put business first; it makes the U.S. no better than gun runners.

The last thing we need is to export our problems (e.g., assault weapons for individuals, large magazines) to other countries, and make it harder to work diplomatically with them.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

With this rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

It would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

This is a very bad policy proposal that will make the US less safe.

I am against switching the regulation of firearms exports from the State Department to the Commerce Department. A switch like this would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

The export of firearms should be done by experts in diplomacy, not experts in business. The United States is already a huge exporter of arms to the world, and changing this rule would make the world even MORE dangerous than it is:

1- It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

2- It would remove licensing requirements for brokers, increasing the risk of trafficking.

3- It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Currently, firearms exports are classified as military and are under the regulation of the State Department, enabling Congress to block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that should be stopped in the name of national security - even to countries where there are serious human rights concerns.

Furthermore, the Commerce Department does not have adequate resources to enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. Thus firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

This proposed change of transfer export licenses of semiautomatic assault weapons from US State Department (focused on safeguarding our nation) to the US Commerce Dept. (focused on promoting business & profits) doesn't make any sense. Arms sales internationally has serious implications on national security. I do not trust someone looking to make money to protect my countries security.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Are you crazy! This makes me fear for the safety of the country. Business in charge of national security?

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. This transfer of authority would open new portals for arms sales internationally, with serious implications for our national security.

With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

I am concerned about a proposed rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U. S. State Department (focused on safeguarding our nation to the U. S. Commerce Department (focused on promoting American Business). It would remove a program that carries out inspections. It would remove licensing requirements of brokers, increasing the risk of trafficking. It would remove the State Department's block on the 3D printing of firearms. These are all actions that would contribute to dangers to our democracy and to grave dangers to the lives of people around the world.

For these reasons please do not change the State Department rules that now work to keep us safe. For the protection of our democracy and the protection of our lives, please do not change the current rules for the exporting of semi automatic assault weapons.

Sincerely,

Peggie Jo Vincent

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Firearms are military goods, they are not commercial goods.

The State Department has the Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. Removing the control of the State Department would end this.

The State Department has enabled a block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

I am writing as an almost 80 year old 'never-missed voting in any election' mother and grandmother to let my government know that I oppose the rule transferring oversight of small arms/firearms exports from oversight by the State Department to the Commerce Department. The former focuses on intergovernmental relations to include, for example, the impact of exporting small arms to different parts of the world, e.g., increasing gang violence in several Central American countries with a resulting significant increase in migration from those places to the US. The latter focuses only on how it can help US businesses be more successful. And of even greater concern to me is the fact that this proposed rule eliminates congressional oversight of commercial weapons sales of \$1 or more. Why? Who asked for this change? Could it be related to the decreasing domestic sale of guns (we are saturated) and thus the fact that gun manufacturers are looking to expand sales by selling internationally? That is not bad per se but the State Department could weigh that increase in sales against the negatives caused by such sales to the stability of other nations to include how such weapons could get into the hands of terrorists. The Commerce Department does NOT have that expert or focus.

So, again, I say NOT to this proposed rule.

General Comment

I am quite disturbed to learn that our government wants to contribute to greater violence, instability, and war in the world. Yet that is what this rule would do, by moving the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department. This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

I can see why the National Rifle Association is promoting this -- they want to encourage more gun sales. But other than arms manufacturers profits, there is only detriment, not benefit, to everyone else.

This rule change would It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would remove licensing requirements for brokers, increasing the risk of trafficking. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

In the interest of our national security and the safety of people in the US and all over the world, please reject this rule change.

With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

How the rule change would make the world a far more dangerous place:

- It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- It would remove licensing requirements for brokers, increasing the risk of trafficking.
- It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer!

Just what the world needs, more tools to kill each other! I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Where is the simple honesty that recognizes the insanity of the motives of the N.R.A.?

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Trump wants to stop Muslims from coming into the U.S. to make us safer. Where then is the logic in exporting weapons to the world?

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

The sale of firearms should remain under the jurisdiction of the State Department. This agency is better able to protect the safety of American citizens and the well-being of other people in the world. The majority of Americans do not accept the argument of the NRA that we are better off with more weapons in the hands of everyone. Perhaps they argue that case because they are controlled by gun manufacturers.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. I believe that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

In addition, this rule change would make the world a far more dangerous place because:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Who will gain from switching oversight from the State Department to Commerce? It is not everyday people around the world or in the US. It is the gun manufacturers who want to further profits by making others less safe as a result of ineffective oversight by the Commerce Department that has the objective of increasing sales for certain industries. The proposed change should not fool anyone as to what is going on and this scheme should be firmly rejected.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department

successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

Firearms and guns should not be available to the worlds citizens without regulation. We have seen the harm it has done in our own country. A major health epidemic. Guns designed for military use have no place in the hands of children, raging adults. This is absolutely ludicrous!

I urge the US State Department to have some common sense and prevent the release of guns into international traffic. Its the equivalent of sending lyons and tigers and poisonous snakes without any trainers or cages.

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Here are more details on how the rule change would make the world a far more dangerous place:

- It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- It would remove licensing requirements for brokers, increasing the risk of trafficking.

- It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

I strongly oppose this rule change.

Thank you for reading my comment.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Arming people in other nations is a matter which should be regulated by those concerned primarily with our safety and security, not by an agency promoting commerce.

Much of the gun-violence around the world is done with American supplied weapons via military sourcing. This too must be curtailed if we want to promote peace. But allowing the sale of firearms to civilians to be overseen by the Commerce Dept. will only exacerbate this violence.

Keep gun exports under the control of the State Department, please.

As long as the export of firearms is under the regulation of the State Department, Congress can block sales of large batches of firearms to foreign countries. A rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department, would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. With a change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

In addition, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have adequate staff available at the multiple locations necessary. Without adequate controls, firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The obvious security nightmare such a change would create far outweighs financial benefits to private American weapons manufacturers, and the plan should be not just shelved, but tossed out permanently.

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. If a rule change occurs that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business), it would open new floodgates for arms sales internationally, with serious implications for our national security.

Now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the insane rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

The rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

The Commerce Department does not have the resources or mission to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. Firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Firearms are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

I vigorously oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. I demand that rule change die before human beings do.

General Comment

I oppose switching the regulation of firearms exports from the State Department to the Commerce Department. Guns are clearly in a very separate category from other commercial products. Toasters are not used by terrorists, organized crime, or for political violence.

The United States needs to maintain or even increase strict export controls and rigorous enforcement of firearms trade. The proposed change would remove licensing requirements for brokers, resulting in increased firearms trafficking. This will put many more lives around the world in danger from the unscrupulous use of firearms.

This change would also result in the elimination of the State Department's Blue Lantern program, which carries out hundred of pre-license and post-shipment inspections and publicly reports on them.

The oversight of the export of items with clear potential military or illegal use should remain with the State Department.

Thank you for allowing me to comment on arms sales to despotic countries.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. We should not be approving the actions of countries whose leaders kill their own people, nor should the US arms manufacturers be engaged in war profiteering, which is against the law.

We never seem to learn. Time after time we train and arm despots who turn against the U.S. by using the tactics we taught them and using the weapons we sold (or gave) them. No arms manufacturer should be allowed to profit from actions against our Government.

Don't allow us to be arms dealers.

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one elsed asked for it or wanted it. The NSSF, the trade group for the gun industry, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobbys influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for household use, they were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. If you go forward with this disastrous policy, I will do everything in my powerpeacefully and democraticallyto hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and clean house.

it is imperative that both society and all sectors too to come to terms of the gun violence that is tearing the core to fragments of our values and democratic society. There is a need to study all levels of society , all levels of education, all levels that measure the core areas of violence Our 2nd amendment assures every US citizen the right to bear arms that is both historical and means more today. However, there is a call for commonsense legislation to assure the above and safety and violence of our US citizens..... What better way to celebrate on this Fourth of July, America's independencethank you.....

I strongly oppose the removal of international arms regulation from the State Dept to the Commerce Dept. State is in the unique position to evaluate the international impact of arms sales to particular individuals and areas of the world, as well as to identify likely bad actors in this exchange. Arms dealers around the world have been contributing to making the world a more dangerous place, and State has been able to limit some of that impact. The mission of the Department of Commerce is to promote commerce, not to secure the safety of the world's citizens. This shift in responsibility is ill-advised and will have dangerous repercussions.

We don't need guns. They are harmful to our country and to other countries to whom we sell them. The claim that the 2nd Amendment protects gun ownership is erroneous. It was written in 1791 and applied to militia, which are no longer our means of defense. The gun manufacturer's lobby, the NRA, has generated political pressure to defeat laws regulating gun ownership, thereby creating serious social problems in the U.S., from a high incidence of gun deaths to crime, racism and drugs. The political will to defeat the NRA and institute regulation of gun sales and ownership is on the horizon. If our politicians don't take action, our youth will.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Guns, especially military-grade weapons, need to be strictly controlled and not be used solely as a source of commercial revenue. Put me down as a NO vote on this proposed rule change.

General Comment

To whom it may concern,

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department for the following reasons.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

Switching the regulation of firearms exports from the State Department to the Commerce Department insures the world will be a far more dangerous place because this action would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

It would also eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would increase the risk of trafficking by removing licensing requirements for brokers,.

It would also remove the State Departments block on the 3D printing of firearms. This would make it possible for anyone with access to a 3D printer, anywhere around the globe, to produce a lethal weapon. When Defense Distributed founder, Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws. This rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Thank you for your consideration & time.

Respectfully yours,
Margaret Randall

General Comment

I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.[2] Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government i.e., taxpayers will absorb the cost of reviewing applications and processing licenses.

The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or

broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms in the U.S. and around the globe. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could generate many preventable tragedies.

The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce.[4] Moreover, the State Department has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to control and verify end uses and end users. Commerce does not have these resources. This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

General Comment

Dear Sir/Madam,

My husband and I are very concerned and strongly oppose the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Simply put, the NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

We support the fact that right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

More specifically, we strongly oppose this rule change for the following reasons:

- It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds license and post-shipment inspections and publicly reports on them.
- It would remove licensing requirements for brokers, increasing the risk of trafficking.
- It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

So for all the above reasons, IT IS THE RIGHT, FAIR, JUST, HUMANE AND HEALTHY ACTION TO oppose the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department!!!!!!!!!!!!

Sincerely yours,
Mary Ann and Frank Graffagnino

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

The only beneficiaries of this rule change are gun manufactures, arms dealers and the vermin they arm. This makes the USA less safe and compromises our moral standing and values. This change is totally against the interests of USA citizens. Please do not do it.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The rule change would make such sales a matter of money rather than one of national/international defense and security. We do harm to our own and other nations when we supply deadly weapons to terrorists and lawless governments.

This kind of sale alienates law-abiding nations (of which we should be the leader), betrays international agreements, and foments violence around the world.

For these reasons I oppose the change.

I have recently learned that not only are there a gut of all kinds of guns in the U. S., but drug smugglers are bringing guns across the border into Mexico contributing to the violence of the gangs there that keep that country in a state of semi warfare with the citizens.

We desperately need to find ways that decrease the huge number of guns available in the U.S. The second amendment does not say that each citizen has the right to act as though they are an independent militia.

Please do not move from the state department oversight of arms' shipments:

switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Changing the process would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Leave firearm export regulations with the State Department whose primary interest is national security and not with the Commerce Department whose primary interest is promoting American business.

I am writing to express concern with the proposal to change the regulation of arms exportation from the State Dept to the Commerce Dept. I have always felt shame that the US is responsible for more exportation of weapons to all parts of the world than any other country. Many times it is clear we have actually armed both sides of a disagreement and we have armed our own enemies. We should promote conflict resolution and not violence. Moving control of munitions export to Commerce just makes it abundantly clear that our own motivations are profit and not safety, diplomacy or democracy. Please oppose this proposed rule.

Comment on DOS-2017-0046-0001

Submitter Information

Name: Jacqui Lipschitz

General Comment

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

I strongly feel the regulation of export of firearms from the US should stay within the State Department where there are resources to track and follow and intercept if necessary any weapons that are exported from the US.

I vehemently DO NOT agree with the proposed rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department. This is a dangerous proposal, as It would eliminate the State Departments Blue Lantern program on inspections and reports.

It would also remove licensing requirements for brokers, increasing the risk of trafficking tremendously. DO NOT CHANGE THE RULE.

I understand there is a proposed rule change that would take the regulation of U.S. firearms exports from the U.S. State Department and put it under the U.S. Department of Commerce. If true, I strongly oppose this change.

Thank you for the opportunity to comment and for your attention to this matter.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. It's quite obvious that this rule change is simply a blind to bring more firearms into the U.S., and we definitely do not need more assault type weapons in the hands of civilians. There have been enough deaths and misery caused by assault weapons and the mentally ill or terrorists who were able to buy them. Please do not allow this rule change to go through.

We should not have the NRA, and U.S. gun manufacturers, selling guns outside this country. Too often, these guns end up being used in wars around the world. You think fireworks on the 4th of July are dangerous? They are nothing compared to the killing and destruction of wars, which are aided when the NRA, and U.S. gun manufacturers are selling guns to foreign governments and private individuals in other countries.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms.

When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Changing any of these rules, at this point, would be bat-shit crazy.

General Comment

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

General Comment

I oppose the rule changes to International Traffic in Arms that would allow less weapons sales monitoring and control.

Since firearms exports are now classified as military and are under the regulation of the State Department, then Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

All guns or any kind have only one purpose, to kill. I have lived for 70 years and have never needed a gun to protect myself. The only people I would need to protect myself from are those with guns. Duh! Why do we need all this killing? To line the pockets of the NRA.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

We would be fools to allow weapons to be sold on the international markets. This could be used by terrorist organizations as a means to arm large numbers of combatants hell bent to create havoc and kill innocent people.

This is another NRA scheme to increase the sales of weapons by the gun manufacturers.

The NRA is a disreputable advocacy organization and is responsible for the gun violence in our country and should not be carried any favors.

General Comment

As a citizen of the United States, I am very concerned about gun violence and our exporting of this violence by selling guns to other countries. I oppose the proposed rule for the following reasons:

1. The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.
2. The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.
3. The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government -- i.e., taxpayers -- will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.
4. National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers of these weapons to register and obtain a license, increasing the risk of trafficking.
5. The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-

shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s.

Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

6. The Commerce Department does not have resources to enforce export controls, even before the addition of 30,000 firearms export licenses as a result of this rule predicted by Commerce. The BISs enforcement office, with no staff in Latin America, Africa, or many other parts of the world, is not equipped to take the same level of preventive measures for end-use controls. Moreover, the State Department has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to control and verify end uses and end users. Commerce does not have these resources.

7. The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less.

General Comment

I am writing to strongly oppose this rule change that would switch the regulation of firearms exports from the U.S. State Department to the U.S. Commerce Department.

This rule change has the potential to harm both national security and international human rights. For example, with the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

The Commerce Department simply does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large quantities of American guns and ammunition.

Thus, switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

This rule change would be dangerous and irresponsible, and must not go forward.

General Comment

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would remove licensing requirements for brokers, increasing the risk of trafficking. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer. It seems your department is forgetting that immigrants are entering America through its southern border requesting asylum from their home countries due to gang violence. Remember these gangs and other violent people are receiving their guns from America more often than from any other country. Hence, the only reason for more easily allowing guns made in America to be shipped across its border is because there is no perceived threat to America's border security by your department. If that is so then I fully expect your department to declare that there is no increased security threat to America's southern border and to vigorously denounce any actions to increase funding for border security, including for more personal or for building more walls on America's southern border.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

General Comment

I am writing to express my opposition to switching the regulation of firearms exports from the State Department to the Commerce Department. I believe this would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

I think this change would make the world a far more dangerous place and here are my reasons why:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

1. It would remove licensing requirements for brokers, increasing the risk of trafficking.

3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Please do not make this change.

Thank you,

Valerie Leonard

General Comment

I live in Lebanon, Oregon and am a member of the United Church of Christ, which is active in peace and justice issues. I have gone on several trips to Latin America, and this past April I was part of a Witness for Peace delegation that traveled to Mexico and spent 10 days in Oaxaca and Mexico City. We talked to several people representing indigenous groups and others who face violence and repression on a regular basis. One common theme we heard was that the perpetrators of violence are using weapons obtained from the U.S., either legally through the Merida Initiative, or illegally by smuggling arms across the border. Arms used in crimes have been traced back to U.S. manufacturers through their serial numbers. Once the arms reach Mexico there is little oversight of their distribution, and they wind up in the hands of armed militias, secret security forces and cartels. The result is that Mexico has one of the highest homicide rates in the world. For the safety and security of the Mexican people, Mexico needs fewer arms, not more, and more control on the guns sent there, not less control.

I oppose the proposed rule for the following reasons:

1. The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. Regarding wide retail availability of firearms, about which comment has been requested, many countries, including Mexico, prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Treating semi-automatic assault rifles as non-military would only increase the number of these deadly arms reaching local police forces, who are supposed to protect civilians, not assault them. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.
2. The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey. Human rights abuses in Mexico are not well-known outside the country and eliminating Congressional oversight would make it more difficult to identify the abusers. Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items

moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.

3. The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators.

4. The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries. Knowing the total amount of firearms deliveries is important in examining the relationship between the number of guns and the amount of violence in a country.

5. Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries. The export of these weapons should be subject to more controls, not less.

Leave the regulation of firearms and ammunition under the State Department.

Sincerely,

Kenneth Crouse

I am opposed to this rule change.

Anything that make more semi automatic weapons, means more dead people.

Keep the situation as it is.

This change would count on gun manufacturers
to tell th gvt about huge shippments of AR-15 to Turkey,
the mfg. would not tell & Kurds would be killed.

NO easing exports of weapon w/o congress in every instance.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

This proposal to move the authority to regulate guns from the State Department to the Commerce Department , is so terribly wrong it is scary. The Commerce Dept does not have the manpower to oversee this big an operation, nor does it have the training. This is so typical of the NRA and would do so much damage to our security in this country, and in the whole world. Please do what you can to see that this does not happen.

Thank you,

Helen Dickey

Dear sir or madame:

I want to protest vigorously any plans to switch the regulation of firearms exports away from the State Department to the Commerce Department. The latter is clearly not equipped to assess the potential impacts of firearms sales to nations where there are rampant civil rights abuses, drug cartel operations, political violence, or just plain high rates of violence. State is much better equipped and focussed to concentrate on our security and the reduction of violence fueling the high rates of mass immigration.

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

Thank you for considering my thoughts about this!

Sincerely,

Lewise Busch

I object to the international trade in firearms shifting from the Department of State to the Commerce Department. We need to keep control of where the arms and what type of arms are going, what they will be used for, and whether the use is consistent with US values. The Commerce Department is charged with selling the US commerce, not in making value judgements on our exports. Do not transfer our arms sales to the Commerce Department.

General Comment

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business).[1] This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

The public comment period for this rule change ends on July 9.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

HERES THE LOW DOWN: Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations, and suicides. They should be subject to more controls, not less!

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

This rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

They should be subject to more controls, not less!

A July 5, 2017, article in the Proceedings of the National Academy of Sciences identifies that Earth is in the midst of its sixth mass extinction episode: Biological annihilation via the ongoing sixth mass extinction signaled by vertebrate population losses and declines.

The article concludes: "...Earth's sixth mass extinction episode has proceeded further than most assume. ... (T)he proximate causes of population extinctions (are): habitat conversion, climate disruption, overexploitation, toxification, species invasion, disease, and (potentially) large-scale nuclear war ... (T)he ultimate drivers of those immediate causes of biotic destruction (are), namely, human overpopulation and continued population growth, and overconsumption, especially by the rich. ... (T)he sixth mass extinction is already here and the window for effective action is very short, probably two or three decades at most. All signs point to ever more powerful assaults on biodiversity in the next two decades, painting a dismal picture of the future of life, including human life."

<https://www.pnas.org/cgi/doi/10.1073/pnas.1704949114>

Fascism, a governmental system run by a dictator, exalts the state and race above the individual.

Fascism enforces severe economic and social regimentation.

Fascism enables mega-businesses / wealthy economic predators who support the dictator to profit from exploiting / harming / enslaving / killing scapegoats -- the "other."

Fascism creates special privileges for its wealthy supporters -- in this case weapons dealers and the NRA, both of whom contribute inordinate dark money to the Republican majority in Congress and the current occupant of the White House.

Does the U.S. Department of State want to accelerate Earth's sixth mass extinction episode with a world-wide blood bath that enriches U.S. arms dealers and the NRA?

I STRONGLY OPPOSE Trump's proposal to move export license oversight for firearms from the Department of State to the Department of Commerce THAT WOULD PROMOTE TERRORISM by making firearms seem like just another commercial commodity for the Dept. of Commerce to rubber-stamp.

The Dept. of State knows what's going on in other countries, so the Dept. of State should continue its oversight power.

Trump's proposed rule change treats semiautomatic assault rifles as non-military. WHAT BALONEY!!!!
U.S. troops routinely use their military rifles in semiautomatic mode.
Foreign militaries and TERRORISTS use them.
TRUMP WANTS FOREIGN DICTATORS AND TERRORISTS TO GET EASIER ACCESS TO GUNS!!!!!!!!!!!!!!!!!!!!

The proposed rule also eliminates Congressional oversight for important gun export deals. WE NEED OVERSIGHT!

The rule IMPOSES COSTS UPON TAXPAYERS that gun manufacturers should pay (costs of processing licenses).

The rule allows unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

PROTECT HUMAN RIGHTS!!!! PREVENT TRUMP FROM ARMING TERRORISTS!!!!

STOP THIS INCREDIBLY RECKLESS AND STUPID RULE!!!!

I am writing against the proposed rule change to switch the regulation of firearms exports from the State Department to the Commerce Department. This change would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

More specifically, the rule change would weaken the control of arms shipments by doing the following:

- 1) eliminating the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them;
- 2) removing licensing requirements for brokers, increasing the risk of trafficking; and
- 3) removing the State Departments block on the 3D printing of firearms.

General Comment

I am writing to strongly and vehemently oppose the proposed rule change.

Switching the regulation of firearms exports from the State Department to the Commerce Department facilitates firearms exports to oppressive regimes, removes safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuels violence that destabilizes countries and causes mass migration.

This rule change eliminates the Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It removes licensing requirements for brokers, increasing the risk of trafficking.

It removes the block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Do not make this change. It opens the door to more violence and death worldwide.

I oppose the rule that would switch the regulation of fire arms export from the State Department to the department of Commerce. switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department for I think this would open the flood gates to fire arms around the world
There is no good reason to make this change other then to aid an industry that has little regard for the finality of it's product and will have serious repercussions that would not be understood until it's too late. Again I ask the department please use all it's resources to oppose this move.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

The rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]
3. It would remove the State Departments block on the 3D printing of firearms, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

I oppose this rule change to switch from the State Department to the Commerce Department the regulations on US munitions. The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

I oppose the transfer of regulatory power over automatic weapons from the State Department to the Commerce Department. Such a change will reduce the check on the sale of dangerous weapons to the hands of authoritarian regimes and criminals. The State Department has a better ability to take into account interests of the United States foreign policy and values than the Commerce Department does.

This is one of the worst ideas that the government has ever come up with. Selling semi-automatics to other countries just encourages despots and dictators to use violence to take away rights of those people who are trying to gain freedoms that we have in the united states. This proves how influential the NRA is by using money to influence politicians that are in congress. This is not what the united states is about. The united states is supposed to encourage other countries to set up democracies throughout the world.

I am entirely opposed to any rule change that would declassify firearms as military and/or that would result in a change of the regulation of firearms exports from the U.S. Department of State to the U.S. Commerce Department. This proposed change would dramatically endanger our national and international security.

The safeguards that are in place, including the Blue Lantern program, licensing and inspection policies, a block on the 3D printing of firearms, along with congressional and public oversight that exists because the U.S. Department of State oversees the export of firearms cannot be underestimated in our global security.

It is important to keep the regulations of firearms within the jurisdiction of the U.S. Department of State.

I strongly oppose the proposed rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

At present, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security, and for the security of numerous nations around the world.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. This would be an extremely wrong-minded and harmful change.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

Thank you for taking action to help make our country and our world a safer place. Vote against the proposed new rule!

Bad idea!

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!!

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

please retain the ban on export of semi-automatic weapons. i am an expert on africa, and am aware of their use on conflicts such as that of Boko Haram in Nigeria, the fighting in the Central African Republic, and in the conflict in North Kivu in the Democratic Republic of the Congo. Another place is South Sudan. These conflicts have resulted in millions of refugees, of flight across the continent and to Europe, and enormous crises of political, economic, and social orders. Please prevent these weapons, the primary instruments in these conflicts, from being sold abroad. Ken Harrow, Amnesty International Country Specialist for Rwanda and Burundi.

General Comment

I oppose switching the review of arms sales from the State Department to the Department of Commerce.

Congress would lose the ability to block sizable weapons sales, which means that countries with serious human rights violations could import weapons unimpeded.

Additionally, the Commerce Department does not have the resources to adequately enforce export controls. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

America has a gun problem; let's not export that problem to other nations.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe

General Comment

I oppose switching the regulation of firearms exports from the State Department to the Department of Commerce. I fear that doing so would make it easier for weapons to get into the hands of organized crime and terrorist organizations around the world and would remove congressional oversight from the practice of selling weaponry. Decisions about weapons sales need to take into account issues of human rights violations, as well as problems of uncontrolled violence in countries where peaceful civilian life has broken down. These are matters for the State Department and Congress to investigate and assess, and are not mere business concerns.

Keep firearms classified as "military." There is no reason (except for the push of the NRA for sales) to move this category to the Dept. of Commerce. America needs more gun control than it has now. Innocent citizens have been gunned down on our streets; children sleeping in beds with drive-by shootings in their neighborhoods. The world does not need more of the same in their areas. We need to provide safety in our schools and neighborhoods keeping guns with the military classification. We need better firearms training of our police officers to head off needless shootings by them also.

Please act to prevent the sale of semi-automatic and similar guns to foreign bodies. The U.S. needs to stop being an exporter of violence and these guns do just that. As the overseeing body, you have the opportunity to block the transfer of the oversight of selling arms to the U.S. Commerce Department. As you know, the Commerce Department applies the lens of business development. This approach will work to boost the sales of guns and not regulate them, ultimately putting U.S. citizens in more danger. Creating an environment where people around the world can gain access to these weapons puts more people at risk, including Americans. We're seeing this across the United States with mass shootings happening every day -- so prevalent that they're not making national news anymore. Making more money at the expense of peoples lives and our national security is wrong. Let the State Department continue to do their job of limiting access to these dangerous weapons.

General Comment

Right now, firearms exports are classified as military, and it is in the best interest of our country's security that it stay that way! This is why firearms are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

The rule change would make the world a far more dangerous place in the following ways:

- 1) It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- 2) It would remove licensing requirements for brokers, increasing the risk of trafficking.
- 3) It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Thank you kindly for leaving the current rule in place!

I think transferring oversight of foreign arms sales to the Department of Commerce is a bad idea, because it would probably make it easier for people in other countries to get dangerous weapons and lead to a more violent world. I hope supervision of such sales would remain with the Department of State.

I oppose a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security. At this time firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. Deadly firearms should not be sold to whoever can pay for them. Our country's priority needs to be human safety, not profitability for firearms manufacturers.

General Comment

Disgusting. Now the criminal NRA wants to see more murders and expand them worldwide. Don't we have enough death at their hands.
the NRA needs to be disbanded and made a terrorist group because that is what it is.
I don't support lay public having guns, they are for the police and military and need to be extremely restricted.
so NO NO NO NO NO gun exports.
stop the insanity now.

Please keep the State Department regulating weapons/arms/guns.

The State Department must keep the "Blue Lantern" program, in place since 1940, which carries out hundreds of pre-license

and post-shipment inspections and publicly reports on these weapons.

It should NOT remove licensing requirements for brokers, which could increase the risk of trafficking.

It should NOT remove the State Departments BLOCK on the 3D printing of firearms.

When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department

successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with

access to a 3D printer, anywhere, to produce a lethal weapon. Changing this rule switch OUT of the State Department's

hands would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe which would

be a VERY frightening prospect.

You must make it HARDER to sell/produce weapons/arms/guns, because America and other countries need LESS

weapons/arms/guns, NOT more! Keep the State Department IN CHARGE OF these DANGEROUS weapons/arms/guns,

and do NOT let the Commerce Department regulate weapons/arms/guns, something it does NOT have the staff/knowledge/

training or manpower to enforce! Let the State Department do its job and HIGHLY regulate ALL weapons/arms/guns NOW!

I want to urge the State Department to maintain control of U.S. munitions. The State Department has the manpower, checks and balances that make sure the U.S does not supply arms to countries where human rights issues are not respected.

It is essential that our country do all we can to promote safety and security here and around the world.

There is potential for

The Commerce Dept. in promoting business to increase arms sales to unruly nations and proliferation of guns is not an avenue to peace.

PLEASE keep control of U.S. munitions in The State Department.

Keep up the good work!

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business).[1] This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

General Comment

It is very important that the State Department continue to handle export licenses for semi automatic assault weapons and other weapons of war to protect our national security. It must not be made easier for criminals and terrorists to obtain American guns and ammo.

Allowing the Department of Commerce to handle these licenses is a dangerous idea driven by the NRA's desire to increase their profits. The NRA cares nothing for the safety or security of our country. We must.

I am writing to you today to express my strong opposition to the proposed rule to transfer oversight of small arms exports from the State Department to the Commerce Department. The Commerce Department prioritizes doing business over safeguarding national security which would make this change far more dangerous for Americans.

We know the US gun industry is faring poorly in today's domestic market, which is why the NRA and the National Shooting Sports Foundation has been lobbying hard to remove congressional oversight of commercial weapon sales of \$1 million or more. No one else asked for it or wanted it.

The NSSF, a gun industry trade group, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobby's influence in the rule's description of semiautomatic assault rifles like the AR-15 as "civilian" products. These weapons were not designed for household use, the were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters.

If you go forwar with this disastrous policy, I will do everything in my power-peacefully and democratically- to hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and drain the swamp.

I strongly oppose a rule change switching the regulation of firearms exports from the U.S. Department of State to the U.S. Department of Commerce. This would adversely affect our national security and destabilize countries around the globe. It would enrich the U.S. gun manufacturing industry at the expense of public safety. There is good reason to leave the regulation of firearms exports at State and maintaining the classification of firearms exports as "military." Congress should be able to block sales of firearms to foreign countries; particularly those with serious human rights violations. With this rule change, Congress would no longer be automatically informed of sizable sales that it could stop in the name of national security.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department

Firearms exports are classified as military" and they are under the regulation of the State Department, and it's why Congress can block sales of large batches of firearms to foreign countries.[1] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[2]

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[3]

Here are more details on how the rule change would make the world a far more dangerous place:

- * It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[4]
- * It would remove licensing requirements for brokers, increasing the risk of trafficking.[5]
- * It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the

globe.[6]

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

I oppose additional expansion of anything leading to sale of guns in this country. They are readily available but the NRA wants to promote a variety of tactics designed to make them even more available. Legitimate purposes such as REGULATED hunting have a long history. However, the expansion of gun availability and variety is unconscionable. Additional REGULATION is highly preferable to additional deregulation. Armor piercing bullets, loopholes for background checks, selling of guns with no legitimate, hunting (Other than hunting for humans) purposes are reasonable restrictions. When the NRA proposes something, it is certain to be focused on additional accessibility to guns in private and public places. Please do not support this change.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

I volunteer regularly working with refugees. I am aware of how many countries have human rights violations. I am concerned that if we send these firearms to other countries, they may be used against innocent civilians. These are military-style weapons, and their sale should be regulated by the State Department.

General Comment

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe

I strongly urge you not to implement this new rule.

General Comment

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one elsed asked for it or wanted it. The NSSF, the trade group for the gun industry, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobbys influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for household use, they were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. If you go forward with this disastrous policy, I will do everything in my powerpeacefully and democraticallyto hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and clean house.

General Comment

I am a parent and active member in the early childhood education community in Chicago. I am opposed to amending the International Traffic in Arms Regulations (ITAR) to revise Categories I (firearms, close assault weapons and combat shotguns), II (guns and armament) and III (ammunition and ordnance) of the U.S. Munitions List (USML) to describe more precisely the articles warranting export and temporary import control on the USML. Items removed from the USML would become subject to the Export Administration Regulations (EAR).

The firearms industry is hurting financially - revising these rules to benefit the fire arms industry's bottom line is NOT in the best interest of Americans or any global citizens.

We do not need more guns in the hands of those that wish to cause us harm. These high powered weapons belong in the hands of our military and not civilians.

Also, the amendments proposed would limit Congressional oversight on important gun export deals and drastically increases the possibility for gun trafficking. This is unacceptable.

I respectfully ask that the Department of State does not amend the International Traffic in Arms Regulations (ITAR).

Regards,

Aisha Noble

General Comment

I strongly oppose the rule change which would move the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Congress no longer being automatically informed about sizable weapons sales so that it could monitor or stop them in the name of national security, (especially in the case of sales to countries where there are serious human rights concerns, such as the Philippines and Turkey), is unconscionable, short-sighted, and greedy, at the expense of the security for future generations.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

General Comment

I oppose this Proposed Rule, and any rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The handling of export licenses of semiautomatic assault weapons and other powerful firearms must remain with the U.S. State Department, which is charged with safeguarding our nation, not the U.S. Commerce Department, which promotes American business. The transfer of authority as proposed would open new floodgates for arms sales internationally, with serious implications for our national security. Because firearms are weapons for killing, firearms exports are rightly classified as military, and fall under the regulation of the State Department, where Congress can block sales of large batches of firearms to foreign countries. Under this proposed rule change, Congress would no longer automatically be informed about sizable weapons sales that could be prevented in the name of national security. In addition, the Commerce Department does not have the resources to adequately enforce export controls, nor does its Bureau of Industry and Security have staff everywhere. Firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would find it easier to obtain large caches of American guns and ammunition. Do not jeopardize our national security with this change.

Do not change the regulation of firearms exports from the State Department to the Commerce Department to facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

If anything we need to reduce the number of guns and other weapons available in the US and the world.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. This rule change will make the U.S. and the World a MUCH more dangerous place.

As a new mother, I do not want my child growing up in fear. I currently have faith in the State Departments Blue Lantern program that carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. This new rule will remove those licensing requirements for brokers, increasing the risk of trafficking.

It is also frightening that it will remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Please DO NOT change this rule. The current rules keep us safe in this already very dangerous world of guns and firearms.

General Comment

I strongly protest against switching the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

The Commerce Department does not have the resources to effectively enforce export controls. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face fewer hurdles to getting large quantities of American guns and ammunition.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Changing oversight and regulation of firearms would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D-printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D-print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

This is a dangerous, ill-considered, profit-driven move that produces revenues for the NRA and increases the likelihood of injuries and deaths.

I oppose the rule change

I oppose the rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department which is focused on safeguarding our nation to the U.S. Commerce Department which is focused on promoting American business. With this rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Detailed concerns are that the rule change would eliminate the State Department's Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them; would remove licensing requirements for brokers, increasing the risk of trafficking; and would remove the State Department's block on the 3D printing of firearms. Promoting American business at the risk of further destabilizing the world is a bad deal.

General Comment

Right now, firearms exports are classified as military, putting them under the regulation of the State Department and allowing Congress to block large sales of firearms to foreign countries. Under the Department of State's (DOS's) proposed rule change, the handling of export licenses of semiautomatic assault weapons and other powerful firearms would shift from the DOS (focused on safeguarding our nation) to the Commerce Department (focused on promoting American business). This means Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey, which would open new floodgates for arms sales internationally with serious implications for our national security.

The Commerce Department simply does not have the resources to adequately enforce export controls. The Bureau of Industry and Security does not have appropriate staffing levels to monitor and regulate firearms exports on the level that they deserve, given their import to our national security. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. Here are more details on how the rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

The bottom line is that switching the regulation of firearms exports from DOS to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less.

I oppose the regulation of firearms by the U.S. Commerce Department for these reasons:

- 1) It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- 2) It would remove licensing requirements for brokers, increasing the risk of trafficking.
- 3) It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

General Comment

It is unconscionable and immoral to consider moving international arms sales from the State Department to the Commerce Department. America has one of the best reputations, internationally, for being a good global citizen, defending human rights and peace in the world. Moving regulation of international arms sales from the State Department to the Commerce Department is based only on the immoral considerations of greed and promoting violence. Please reject any changes to International Traffic in Arms Regulations.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]
3. It would remove the State Departments block on the 3D printing of firearms. When Defense

Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

I oppose strongly this rule change, which would (I believe most intentionally!) weaken US regulation of firearm exports. Weapons of war are far from just an issue to be monitored weakly by a Commerce Department uninformed of what international impacts arms sale overseas will have. Is the world no longer dangerous...just a fertile sales ground for the arms industry? Do we want the NRA setting policy for where we ship arms? Do we want a department without strong arms enforcement capabilities to be the only agency watching for arms traffickers? Leave arms classified as such--"military"--so that the State Department and Congress will retain oversight!!

General Comment

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be better controlled.

General Comment

I strongly oppose the proposed rule to move regulation and oversight of firearms (small arms) exports from the State Department to the Commerce Department. An agency that prioritizes doing business over safeguarding national security has no business controlling the sale of small arms. In addition, it's truly crazy to eliminate congressional oversight of commercial weapons sales of \$1 million or less. The obvious intent here is to increase sales for the faltering U.S. gun industry, at the expense of our national security. This is completely unacceptable. If this dangerous policy is implemented, U.S. national security is in jeopardy, as well as the safety of people around the world. Please think through the long-term implications of this change, none of which are good.

Thank you for your time and attention.

I am opposed to the proposed ammendments noted as the International Traffic in Arms Regulations: U.S. Munitions List Categories I, II, and III. Terrorism and other violence doesn't need the release of additional and very violent weaponry spread across the world. Relaxing these regulations is tanamount to fueling a wildfire; the increase in profits to U.S. businesses, in my opinion, pales to the harm we can add to throughout the world.

I strongly urge the Commerce Dept and the State Dept to oppose relaxing rules that would make it easier for U.S. firearm manufacturers to export assault rifles and other guns with less oversight and accountability. Guns are made to kill people in war and only should be used in war. we should be making it harder and not easier to export weapons of war.
thank you

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Commerce does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

The NRA is a corporate organization focused on one thing only: How much profit they can make from the sale of weapons. As it happens, I spent part of my career working in the ordnance world at DoD. I also live on the southern border.

The notion that ANY foreign military sales should be released to the Dept of Commerce is ludicrous. Much of the gun violence we deal with is a direct result of US weapons going over the border, to arm the drug cartels, who then create the violence in our cities associated with the drug trade. No sane person would want to increase that.

Weapons sales of any sort need to be housed in the State Dept. To do otherwise is self-defeating.

To Whom it May Concern at the DOS:

I'm deeply concerned about the Proposed Rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department.

While the current administration has made it abundantly clear that US exports, and supporting large business is a TOP priority, the same administration is also name national security as a TOP priority, making major changes to immigration and imports/tariffs under that guise. I fail to see how reducing regulations on exporting firearms DOESN'T affect national security.

The State Department's focus is safeguarding our nation
The Commerce Department's focus is on promoting American business

This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security: facilitate firearms exports to oppressive regimes, remove safeguards that help keep organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. How are any of those things in the best interest of our country? And doesn't nation security always come first? For example, the Defense Department has the largest slice of the US budget! And the president has tremendous powers to act in the name of national security (e.g., current travel ban), that are not available to promote business for a reason. So again, I fail to see how this proposed rule protects the national interests of this country. PLEASE STOP caving to NRA special interests, and continue to safeguard our nation.

With respect,
D

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. We need safe guards in place to ensure that large quantities of weapons are not being shipped to countries with dangerous regimes. Congress must continue to be notified when large quantities of weapons are sold and shipped and where they are going. The Commerce Department lacks the controls necessary to ensure that the United States remains a conscientious global citizen.

I strongly oppose switching the regulation of firearms exports from the State Department to the Department of Commerce. This change would make our country and the world more dangerous in many ways:

It would remove the State Department ability to restrict 3D printing of weapons and open the floodgates for more weapons domestically and internationally.

It would remove licensing requirements for brokers.

Would stop the program that inspects pre-license guns and issues reports.

Without the State Department oversight and regulatory authority, firearms will be exported to anyone with money and fuel increased organized crime and terrorism.

There is NO need switch control of firearms exports unless it is to pay for firearms lobbyists. Please do not approve this move.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Exporting military grade weapons without congressional or diplomatic review opens the door to allowing US companies to provide arms to authoritarian governments, terrorists and other unethical entities. The sale of semi-automatic weapons of war is not simply a business decision, it is 100% an ethical and diplomatic decision that requires oversight from US government - and not just the commerce department, which does not have the expertise or resources to adequately evaluate these sales. The United States absolutely should not be selling weapons of war without substantial oversight from elected officials and staff with the expertise to evaluate the human rights and diplomatic implications of these sales.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The NRA is pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security and those of other nations.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. This is why it is so dangerous.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. THERE IS NO JUSTIFICATION OR REASON FOR THIS CHANGE.

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D print weapons. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe. THIS NEW TECHNOLOGY ALONE MAKES THIS CHANGE EXTREMELY DANGEROUS.

PLEASE DO NOT ALLOW THIS PROPOSED CHANGE. IT IS DANGEROUS FOR THE US - AND THE WORLD. Thank you.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The U.S. State Department is focused on safeguarding our nation, while the U.S. Commerce Department is focused on promoting American business. This transfer of authority could open new floodgates for arms sales internationally, with serious implications for our national security. Switching the regulation of firearms exports from the State Department to the Commerce Department would could lead to firearms exports to oppressive regimes, removing safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Firearms sale should continue to be under the jurisdiction of the State Department. The Commerce Department is, obviously, more interested in MONEY than SAFETY. Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns.

General Comment

I oppose switching the regulation of firearms exports from the U. S. Department of State to the U. S. Department of Commerce.

There are many good reasons why firearms exports are classified as military and are closely regulated under the Department of State, with Congress given notifications of sizable weapons sales to foreign countries and the ability to block these sales for national security.

The Department of State provides needed gun export oversight, which the Department of Commerce does not have the resources to do. Enforcing the current regulations prevents firearms traffickers, terrorist groups, organized crime, and oppressive regimes from obtaining large caches of American guns and ammunition.

However, if gun export licensing is moved to the Department of Commerce, Congress would not be informed automatically of notable arms sales, and safeguards would be removed so that dangerous agents could more easily obtain semiautomatic assault weapons and other powerful firearms, and this opens the floodgates for destabilizing violence around the world.

The handling of export licenses of assault weapons is properly under the Department of State, which is focused on safeguarding our nation. The Department of Commerce, with its focus on promoting American business, is not the suitable agency for regulating arms exports.

I read somewhere Those who live by the sword, die by the sword. Exporting weapons around the world is not an ordinary business like exporting food or solar technology. For the sake of children everywhere, lets do all we can to prevent violence and the suffering it causes.

I understand that the NRA is pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

This change threatens our security at home and abroad. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

This makes no sense at all. Please stop this insanity of gun violence.

I can't even believe you are considering something as bone headed as switching the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The goals of those two departments are completely opposite - from one that would restrict weapons sales in the interest of national security, to one that would promote it to benefit U.S. businesses. To be perfectly clear, I oppose this rule change that would make our country and the world drastically less safe.

Hello,

I oppose the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department! It is bad enough this country leads the way in allowing "poison for profit" in so many of our consumer goods. All in the name of capitalism, greed, ignorance, arrogance. Now we want to add firearms world wide?! This is pure insanity! Just look at how sick the domestic terrorist murders are in the states today. This will open the door for ALL countries to "enjoy" the murders while the "good, rich, white, conservative christians" roll in more profits! Pro-life? I think not! Pro CULT is all they really are! Studying the ORIGINS of their cult PROVES they are the ones we need to STOP! NOW! So, PLEASE! Do NOT allow these regulation changes!!

Regards,
Bill

General Comment

I STRONGLY oppose this rule change that would shift the the handling and regulation of firearms export from the U.S. State Department to the U.S. Commerce Department. This is entirely inappropriate and unsafe. This responsibility needs to remain with the U.S. State Department, because its focus is national security. The U.S. Commerce Department is completely inappropriate because its focus is on promoting American businesses, and in this case, it would be weapons sales. Its focus would be money and not national security. This is dangerous.

Further, it is my understanding that firearms exports are all classified as military. This is critical because, under the authority of the State Department, Congress is now able to block sales of large batches of firearms to foreign countries. If the authority is shifted to the U.S. Commerce Dept, Congress would be utterly uninformed about sizable weapons sales that it could (and should) stop in the name of national security. Congress would similarly be uninformed about weapons sales to countries where there are serious human rights concerns, as in the case of he Philippines and Turkey.

Again, this change would be a HUGE MISTAKE, and one that I adamantly OPPOSE. It is NOT in The United States best interest. It would be in the NRA's best interest. That is wrong.

I am writing to oppose the move of weapons sales and licensing from the State Department to the Department of Commerce.

Here are several reasons:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

In addition, the commerce department does not have adequate resources to enforce export controls.

This transfer is bad for the U.S. and is bad for the world.

Thank you,

General Comment

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one elsed asked for it or wanted it. The NSSF, the trade group for the gun industry, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobbys influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for household use, they were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. If you go forward with this disastrous policy, I will do everything in my powerpeacefully and democraticallyto hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and clean house.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security. Don't we have enough people dying from these killing machines???

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

And please remember that the majority of military-grade weapons used by the Mexican drug cartels are obtained from the US!

I strongly OPPOSE changing regulation of firearms exports from the State Department to the Department of Commerce. This change would make our country and the world more dangerous in many ways:

It could result in more weapons on the street - certainly we have enough illicit use guns. I believe it would result in increased weapons at home and abroad and restrict The State Department's oversight of many current activities. more weapons domestically and internationally.

It would remove licensing requirements for brokers.

It stops the program that inspects pre-license guns and issues reports.

We do not see the need switch control of firearms exports unless it is to pay for firearms lobbyists. Please do not approve this move

General Comment

Switching regulation of firearms exports from the State Department to the Commerce Department is a dangerous, short-sighted idea. It will facilitate exports of weapons to oppressive regimes, and remove the safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and it will further fuel violence that destabilizes countries and leads to mass migrations of refugees.

If you switch regulation of firearms exports to the Commerce Dept., it will eliminate the State Department's Blue Lantern program, in place since 1940. Blue Lantern carries out hundreds of pre-license and post-shipment inspections and publicly reports on the results of their inspections.

This change will also remove licensing requirements for brokers, which will instantly encourage trafficking. Worst of all, the change to the less well-staffed and more porous Dept. of Commerce will remove the State Department's current block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Dept. successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer--anywhere in the world--to produce lethal weapons. The rule switch you are proposing will remove this block, and enable 3D printing of firearms in our home-grown terrorist organizations--as well as all over the world.

This will contribute to instability and violence all over the world and lead to yet more blood on the hands of our country. Our own nation is already dangerously divided; the rule of law is derided by men who think they are above the law. Allowing the unchecked flow of assault and other large caliber weapons will lead to yet more gun violence, more mass shootings of helpless and harmless civilians and children, and at last to the kind of sectarian bloodshed such as we have seen in countries all over the world--only this time, it could happen right here, in America.

General Comment

I am registering my dismay at any efforts to increase export of munitions, especially to Mexico, Central America and to any nation that is at all politically unstable. Mexico is the country that I know most about because I volunteer with Greater Boston Trade Justice, a group of citizens in eastern MA working to improve NAFTA. However the dynamics in all these countries are similar.

Access to weapons is critical to the survival of drug cartels, so they love America's current lax gun laws. 70% of guns recovered in crimes in Mexico can be traced to the USA. High caliber rifles are preferred.

At present guns and cash are transported illegally overland along the same routes that drugs are transported north. How much easier would it be if the money obtained from drug sales were to be spent on guns legally imported into their own country? Given the cartels' level of infiltration into local and even federal government, laws regulating legal sales are very weak.

Violence related to drug trafficking is currently a huge cause of fear for life in Mexico and Central America. Thus the problem of aliens illegally crossing the border into USA is exacerbated.

Given these facts, how does increasing firearms exports even make sense if you at the same time want to decrease illegal immigration?

In addition, how is this deregulation different than the Fast and Furious program, in which Border Patrol Agent Brian Terry was killed in December 2010? That program was rightly criticized, especially by politicians on the right side of the aisle. But that program at least tried to actually fight criminal activity. Deregulating gun exports would only increase it.

Please reconsider this deregulation.

Sincerely,

Elisabeth King

Automatic and Semi-Automatic Weapons whether currently available in the U.S. from commercial dealers are primarily weapons of war designed to kill people with maximum efficiency. Reclassifying these exports as non-military and subjecting them to less scrutiny when sold outside the U.S. is dangerous both to human life and the U.S. foreign policy interests. Imagine the outrage that will be levied at the U.S. by allies and/or others if such weapons become as easily and inexpensively available abroad as they are presently in the U.S. where they have been shown to encourage gun violence and even mass murder in schools, shopping centers, concert venues, etc. Continuing to apply more scrutiny and higher export registration fees will discourage U.S. manufacturers of such weapons from offering them commercially abroad.

General Comment

Firearms exports must continue to be classified as military so that they are under the regulation of the State Department, and so that Congress can block sales of large batches of firearms to foreign countries. If firearms are not classified as "military", Congress would no longer be automatically informed about sizable weapons sales and could not stop them in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

This would be dangerous to the US and to the world.

General Comment

I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.[2] Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government i.e., taxpayers will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.

The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could generate many preventable tragedies.

The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce.[4] Moreover, the State Department has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to

The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.

This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

General Comment

Dear Sir or Madam:

I oppose the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

As you likely know, this rule change would, among other things:

(a) eliminate the State Department's Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

(b) remove licensing requirements for brokers, increasing the risk of trafficking.

(c) remove the State Department's block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Please do not move forward with this rule change.

Sincerely,

Mark and Candace Anderson

General Comment

I oppose the proposed rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security. Currently, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less! As a public health nurse and a citizen concerned about human rights and global health, I strongly oppose the proposed rule change.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department

The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

The sale of "assault" style weapons must come through the state department. If left to commerce our national interests will NOT be followed. The weapons will probably end up in the hands of enemy governments or terrorists. The truth is, we won;t know until it's to late.

Why would we change how guns are handled by our government? We need to keep the U.S. State Department in charge of the selling and exporting of dangerous things like guns and weapons because it is the job of the U.S. State Department to safeguard our country! Changing the department that safeguards our country to the U.S. Commerce Department would be outrageous and unsafe!

Firearms are dangerous!! They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They are used to kill U. S. citizens daily. We need MORE controls on how these weapons are acquired!

They should be subject to far more controls, not less!

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Do not change how guns and weapons are classified! They are classified as "military" because that is how we keep our country safe! This is why they are under the regulation of the State Department!!

Please keep us safe. Don't let big business control how many of our enemies have weapons because they don't care about our lives!!

Please do not enact this rule. Anything that increases traffic in arms should be examined carefully. There isn't enough justification for this if you remove the profit motive. We don't need the industry taking over. The profit motive should not outweigh international concerns, and control should remain with the State Department.

I urge the Commerce and State Departments to oppose relaxing rules that would make it easier for U.S. firearm manufacturers to export assault rifles and other guns, with less oversight and accountability. With gun violence killing 1,000 people around the world every day, we should be making it harder, not easier, to export U.S. made weapons of war.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

I strongly oppose this regulation.

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one elsed asked for it or wanted it. The NSSF, the trade group for the gun industry, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobbys influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for household use, they were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. If you go forward with this disastrous policy, I will do everything in my powerpeacefully and democraticallyto hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and clean house.

The State Department must continue to regulate the export of firearms. The role of the State Department is to interact with other countries in a way that protect American interests and the interests of other nations. As possible agents of death, firearms can compromise both American and foreign security. The State Department has a compelling interest in preventing, or at the very least overseeing, the sale of firearms. Please do not relinquish this authority.

To the U.S. State Department,

I am writing to express my opposition to any rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

I believe such a rule change would be extremely unwise because the State Department has the facilities needed to prevent guns from falling into the hands of organized criminals, political extremists, terrorists and human rights violators around the world. The Commerce Department is much less well equipped to do this.

Sincerely,
Darien Gardner

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. This change in the administration of gun sales will create a fundamentally more violent and unsafe world both inside and outside of the U.S.

This change would:

1. eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them
2. remove licensing requirements for brokers, increasing the risk of trafficking
3. remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe

For these reasons I strongly oppose this regulatory change in arms sales.

General Comment

As a very concerned U.S. citizen and taxpayer I appreciate your carefully considering my comments!

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

More reasons that the proposed rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Please cancel this proposed rule change!

I strongly oppose the proposed rule to allow international traffic in arms regulations from the State Dept to Dept. of Commerce.

Really, are guns just a commodity now? It would remove the State Departments ability to restrict 3D printing. Is this the best way to govern? Appauling.

It would also remove licensing requirement for brokers and stop the program that inspects prelicenses.

We CANNOT let this happen in our country and our place in the world. Seems like we've given up being civil!.

I understand there are regulations being explored to move the regulations of the sale of guns from the State Department to the Commerce Department.

I do NOT support this move. The State Department is doing a good job and understands the myriad geo-political issues with selling weapons to different countries. This context should remain when looking at the sale of weapons. We have seen too much instability in the world from our sale of weapons to varying governments, rebel groups and others. We must look at the bigger picture of weapons sales and not just look at profit.

Please do NOT move this oversight capacity from the State Department to the Commerce Department.

Thank you.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

General Comment

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

The rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business).[1] This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security. This cannot be allowed to happen! The NRA may be the most dangerous, destructive, immoral and criminal "terrorist" organization in the world today, and I do not use the word terrorist lightly. We MUST retain control and knowledge of all gun sales and we cannot create new systems that would give the NRA and gun manufacturers free rein.

Here are more details on how the rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

I oppose changing rules that would increase International sale of arms. Keep the State Departments Blue Lantern Program. Keep the State Departments blocking of 3D printing of weapons. Why are we trying to arm the world. This is foolish!!!

The sale of fire arms and weapons should stay under the State Department to ensure that weapons do not get into the hands of terrorist or enemies of this counrty. The State Department has been doing a good job of monitoring the sales so they can be stopped before it is to late. The Commerce Department does not have the personnel or experience to monitor the sales of weapons. This change will seriously jeopardize our national security . I ask that there be no rule change regarding the sales of weapons.

The argument of cost savings is false and deceptive. This move to the Dept of Commerce would cause many small conflicts throughout the world to be exacerbated as conflicts would likely worsen, with potential detriment to our national security. This move also affects our immigration policy as many of the immigrants to the US are seeking asylum from severe conflicts and violence in their home countries. The only entities to benefit from this are gun manufacturers. This change needs to be halted now for humanitarian and national security reasons.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

General Comment

A rule change to move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department is a dangerous idea to all Americans, since it has serious implications for our national security.

Currently, firearms exports are classified as military, so the State Department can regulate their sale and Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department does not have the resources to adequately enforce export controls. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

The current administration talks endlessly about national security, but if this rule change goes through, we will all see that their real top priority is allowing the gun manufacturers to make more money and they really don't care about Americans security at all.

This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security. Right now, firearms exports are under the regulation of the State Department and Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

This rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms.

When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

This is crazy and dangerous. Do NOT make this rule change and endanger our country further.

General Comment

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Here are some ways that this rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The Commerce Department does not have the resources to adequately enforce export controls, which means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

General Comment

I oppose the proposed rule because the regulation of weapons, and especially assault style weapons, should be with the State Department, not the Commerce Department. If the intention of this regulation is to prevent trafficking, then this responsibility should rest with the State Department, as the Commerce Department does not have the resources to properly enforce this. The Commerce Department's aim is to increase trade, and while that is fine if we are talking about strawberries or salt, this is a dangerous precedent to set for a product that is lethal - gun exports and manufacturing should require extra scrutiny and regulation, and I strongly oppose this rule change.

Moving regulation of firearms export from the Department of State to the Department of Commerce seems like a misguided idea, and is likely to decrease our country's security. Without treating firearms as a military export, the risks of accidentally enabling terrorists and arms traffickers are simply too high.

The proposed rule to loosen regulations on firearm exportation is terrifying. Why would we want to arm the rest of the world? So that they can attack? So that they can build militias and guerilla warfare? So that these guns can end up in the hands of terrorist groups? Stop arming terrorists! Dont implement this change, it is too dangerous for our country and the world.

General Comment

I am an an ordained Deacon in the Episcopal Church and I am very concerned about this rule change. I was in Newtown Connecticut at the time of the Sandy Hook tragedy. I am very concerned that this proposed change will impact the lives of so many living under gun violence. The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms. The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.[2] Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role. The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government i.e., taxpayers will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.

4. National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for

brokers of these weapons to register and obtain a license, increasing the risk of trafficking. That will make it easier for unscrupulous dealers to escape attention

The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The Commerce Department is unlikely to make the same argument once those weapons are transferred to their control. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms in the U.S. and around the globe. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could generate many preventable tragedies.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department!! This would make it much easier for dangerous people to obtain weapons they could use on Americans at embassies around the world. It would also allow oppressive regimes to get more weapons that they could use on anyone who speaks out against them.

General Comment

Please continue to handle export licensing of semiautomatic assault weapons and other powerful firearms within the U.S. State Department (focused on safeguarding our nation). Do NOT move it to the purview of the U.S. Commerce Department because this transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

If the U.S. Commerce Department is given this responsibility, it would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Here are more details on how the rule change would make the world a far more dangerous place:

- 1) It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- 2) It would remove licensing requirements for brokers, increasing the risk of trafficking.
- 3) It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Thank you.

General Comment

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one elsed asked for it or wanted it. The NSSF, the trade group for the gun industry, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobbys influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for household use, they were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. If you go forward with this disastrous policy, I will do everything in my powerpeacefully and democraticallyto hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and clean house.

Opposed to shifting regulation of firearms export to U.S. Commerce Department.

Would stop Congress being automatically informed of weapons sales it could stop in the name of national security, especially to countries with serious human rights abuses, such as the Philippines and Turkey.

Commerce Department lacks resources to enforce export controls: Bureau of Industry and Security does not have staff everywhere. Hence, firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

It would eliminate:

- ..the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- ..licensing requirements for brokers, increasing the risk of trafficking.
- ..State Departments block on 3D printing of firearms.

I am a gun owner and former hunter and strongly OPPOSE switching the regulation of firearms exports from the State Department to the Department of Commerce. This change would make our country and the world more dangerous in many ways:

It would remove the State Department ability to restrict 3D printing of weapons and open the floodgates for more weapons domestically and internationally.

It would remove licensing requirements for brokers.

Would stop the program that inspects pre-license guns and issues reports.

Without the State Department oversight and regulatory authority, firearms will be exported to anyone with money and fuel increased organized crime and terrorism.

There is NO need to switch control of firearms exports unless it is to pay for firearms lobbyists. Please do not approve this move.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. This is a dangerous and irresponsible action that must be stopped. The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They have been pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department, which its primary focus is on promoting American business. This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

Firearms exports are classified as military under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With having firearms sales regulated by the U.S. Commerce Department, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns.

The reality is - this is not only dangerous for other countries, but our country as well. This is truly an insane proposition that would turn ugly and deadly fast. The NRA has already proven that they don't care about anyone's life and that they will go to great lengths to get what they want. This must be stopped because they don't care how many people will die in other countries or this one as long as they make their billions. They just don't care.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. This change will result in more unregulated and unreported gun sales. Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

I disagree with this rule change. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would remove licensing requirements for brokers, increasing the risk of trafficking. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

For Gods sake, do NOT allow the switching of the regulation of firearms exports from the State Department to the Commerce Department!

Without question, it would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel the violence that destabilizes countries and causes mass migration.

Although Putin would like the way it would further undermine the reputation of standing for world peace that the USA has nurtured since its foundation, even he wouldnt approve of this if it meant his citizens could buy the guns.

Please, please do not let the NRA get away with this dangerous, greedy, thoughtless move. Keep gun control and the control of export licenses of semiautomatic assault weapons and other powerful firearms within the State Department!!

Our national security and, to a large extent, that of the world, depends upon it!

I would ordinarily leave my contact info but I'm afraid of NRA repercussions.

Dear sir

I am writing to oppose the proposed changes to the regulation of domestic Firearm sales to foreign purchasers.

The United States has supplied weapons to foreign groups in the past only to have those same weapons used against our own military personnel. Mistakes were made in the past but I would rather arms sales were regulated by the State Department whose aim is to protect the safety of our nation. The Commerce Department has a goal of increasing our sales and isn't tasked with determining whether those sales constitute a future danger to our country.

I have heard about the proposed rule change moving regulation of arms sales from the Department of State to the Department of Commerce, and I strongly oppose this change. The Commerce Department will encourage arms sales, which will only increase the number of arms throughout the world. This will potentially make travel more dangerous for Americans traveling abroad, and will make the world more dangerous in general--a bad move.

I am opposed to the proposed rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce. This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security. Currently, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns or US national security concerns. In addition, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. In addition, it would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them; it would remove licensing requirements for brokers, increasing the risk of trafficking; it would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration

Here are more details on how the rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

General Comment

Please do not eliminate the State Department Blue Lantern Program in force since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one elsed asked for it or wanted it. The NSSF, the trade group for the gun industry, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobbys influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for household use, they were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. If you go forward with this disastrous policy, I will do everything in my powerpeacefully and democraticallyto hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and clean house.

General Comment

I usually try to avoid using comments that are written for masses because I worry they won't be taken seriously. I am disappointed that just about anybody in the United States can legally buy a gun that can kill multiple civilians or LEO in a matter of minutes. The idea that a rule is being considered to spread this irresponsible behavior to other countries over which we have no control and no ability to change laws is appalling. I am attaching a letter that I think should be taken very seriously because I agree with it and want to keep the world safer even as our own country goes up in flames: I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

This move raises the threat of gun violence and danger in the US and across the world. Without State Department oversight and regulatory authority, firearms will be exported to anyone with money and fuel increased organized crime and terrorism. The children and innocents of the world will suffer while gun lobbyists, manufacturers and the NRA will profit. I strongly oppose this unnecessary change and ask you to not approve it. Thank you.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

General Comment

I am strongly opposed to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security and eliminating congressional oversight of commercial weapons sales of \$1 million or more. This rule has one purpose only: to garner profits for a U.S. gun industry at the expense of safety for communities abroad and, potentially, our own armed service members. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one else asked for it or wanted it. We see the gun lobbys influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for civilian use; they were designed to kill on the battlefield. Please do all you can within the State department to retain reasonable oversight of small arms trade that balances commerce with international diplomacy and national security.

As an American citizen, I find it appalling that the government would consider moving this rule to the DOC. Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. [2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. [3] This is highly concerning as we have already seen our current President has no consideration for human rights concerns and will happily give stuff to anyone if they pay the right amount of money.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. [4]

Some other details on how the rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. [5]
2. It would remove licensing requirements for brokers, increasing the risk of trafficking. [6]
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe. [7] The answer is not more guns when we already have significant issues with gun violence in this country.

The proposed ITAR revision for firearms and ammunition promises little, and risks much. As an analyst of the global arms trade and weapons proliferation for thirty years, I recognize the transformative power of regulatory reform. But this is something else. The proposed revisions promise short-term benefits, which seem unlikely to amount to much in an already competitive global market. That makes this deregulation for the sake of deregulation itself. Meanwhile, the change unleashes three forces certain to accelerate long term American industrial decline and loss of influence over global consequences.

First, they show that the United States no longer will set global normative standards for all form of arms transfers and non-proliferation. Previously the United States Government has shown it will not further tighten restrictions. As the first outright relaxation of oversight standards in arms exports in over fifty years, the change marks a switch in policy dating from the Kennedy Administration.

Second, as the dominant player in global small arms trade, the United States has the most to lose from further loosening. As other countries emulate Americas relaxation of restrictions, not only will there be more firearms reaching more hotspots, but we can be certain the United States will see its share of a more competitive market decline. Other manufacturing countries, with lower wages and more aggressive export subsidies, are more likely to reap the seeds sown here.

Third, the change marks a fundamental shift in the nature of arms export oversight. By reducing the role of the US Government, it leaves regulation exclusively to the recipient government. This shifts the burden of proof in international human rights and state oppression, from outside powers with no direct interest in the outcome, to the recipient governments, governments that are often guilty of using imported weapons in appalling or frightful ways, ways that would be completely illegal in the United States.

I wonder when we're going to wake up and realize we're all connected...that we all come from Source. When are we going to stop killing each other? Is money really the only thing on Earth we care about? Is living in fear the only way we know? Now, we have to export all of that as well? What possible justification could there be for shipping out more guns other than greed? One day, our future ancestors will look back on us and think we were utterly barbaric. So very sad that we don't have the courage to have a better legacy than this.

There is no reason to change the rule to permit free sales of arms to foreign countries except to further enrich gun sellers. In the current system there is sufficient oversight; the Commerce Department doesn't have the means or the natural purpose to monitor and restrict sales to prevent sales to enemies of the U.S. and allies, including terrorists.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

Weapons sales should absolutely be classified under 'military' and therefore be regulated by our representatives in government. Congress should have the power to regulate and block weapons sales to foreign agents in the name of national security

General Comment

Expanding the sales of guns, especially semi-automatic and automatic weapons, in this country and the world is not a good idea. These weapons can fall into the hands of terrorists and used to kill innocent people. European countries, Australia, and others that limit the sale and use of these weapons have less mass shootings and gun related deaths then we do. /we need less of these weapons in the world, not more

General Comment

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one elsed asked for it or wanted it. The NSSF, the trade group for the gun industry, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobbys influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for household use, they were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. This is a disastrous policy, and the American people will hold you accountable if it is enacted.

I oppose shifting the responsibility for gun exports from the State Department to the Commerce Department. As we've seen in recent years, armed groups around the world can cause global instability that can affect American safety. The State Department is in the best position to ensure that firearm exports do not exacerbate military situations or humanitarian crises. Thank you.

General Comment

Currently, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security. The Commerce Department does not have the resources to adequately enforce export controls, therefore, firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Please deny the rule change (that the NRA is pushing) that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

This proposed rule is one of the most wrongheaded and misguided to emerge from the Department under the present administration.

The sale of arms abroad is far more than a business concern. Munitions exports are a matter that profoundly affects the national security of the United States and its relationships with other powers. Those concerns can and should often outweigh the commercial interests of arms manufacturers, and therefore clearly fall within the purview of the Department of State. Our international relations and relationships should not be dictated by gun manufacturers and the NRA, which would be precisely the result of the enactment of the rule.

This proposed rule is a mistake and the Department should immediately abandon it.

As a 25-year veteran of the U.S. Commercial Service, charged with promoting the export of U.S. products & services, I strongly PROTEST against this change in the approval of the export of U.S. munitions.
from

It is absolutely critical the the U.S. Department of State retain this authority, in order to balance the financial gain from export sales against our other important foreign policy concerns, such as a country's treatment of its own citizens, its commitment to human rights, rule of law, and basic, fundamental democratic principles.

Any short-term gain in export sales is not worth the wholesale abrogation of the very principles which America -- the shining city on the hill and the world's beacon of democracy -- represents to the world and for which Americans have died.

RE: Comments on Proposed Rule – International Traffic in Arms Regulations: U.S.
Munitions List Categories I, II, and III, 83 FR 24198 (May 24, 2018).

Dear Mr. Monjay:

The National Shooting Sports Foundation (NSSF) respectfully submits the following comments to the above-referenced Federal Register Notice. NSSF is the trade association for America's firearm and ammunition industry.¹ Formed in 1961, NSSF membership includes more than 12,000 manufacturers, distributors, firearms retailers, shooting ranges, sportsmen's organizations, and publishers. We seek to promote, protect, and preserve hunting and the shooting sports, and we offer the following public comments.

Summary of High-Level Comments

The policy justifications for the proposed rule and the corresponding proposed rule by the Commerce Department are described well on Commerce and State Department web pages at: <https://www.bis.doc.gov/index.php/forms-documents/federal-register-notices-1/2220-cats-i-iii-myths-v-facts-posted-5-24-18/file> and <https://www.state.gov/t/pm/rls/fs/2018/282485.htm>

¹ For additional information on NSSF, please see www.nssf.org.

We encourage all those reviewing the proposed rules and the public comments to read these fact sheets to learn what the proposed regulatory rationalizations of U.S. controls on the export of commercial firearms and related ammunition are and, as importantly, are not. So that the policy objectives behind the proposed changes, as well as the “myths” associated with them, are knowable to all those reviewing the proposed rules, we ask the State Department to republish their essential content in the preamble to its final rule. In this way, they will be part of the official record and help inform comments on final agency decisions made regarding the proposed rules.

As better described by these fact sheets and in the preambles to the proposed rules, commercial firearms and related items that are widely available in retail outlets that are now subject to the export control licensing jurisdiction of the State Department under the International Traffic in Arms Regulations (ITAR) on its U.S. Munitions List (USML) Categories I, II, and III would be transferred to the licensing jurisdiction of the Commerce Department’s Export Administration Regulations (EAR) in a series of new and coherently organized Export Control Classification Numbers (ECCNs). These proposed rules are the logical continuation of an effort began in 2010 under the Obama Administration to modernize the administration of U.S. export control regulations “to create a simpler, more robust system that eases industry compliance, improves enforceability, and better protect America’s most sensitive technologies.” We agree with the objectives of these bipartisan and widely supported changes. The proposed changes merely align the regulations with the nature of the items at issue, thus more efficiently accomplishing the national security and foreign policy objectives of the controls. Such changes reduce unnecessary burdens for both the U.S. Government and U.S. industry.

We have reviewed the proposed rule thoroughly with our membership. Except with respect to several of our comments set forth below, most members have told us that the final versions of the rules would eventually be beneficial because they would significantly reduce the overall burden and cost of complying with controls on the export of commercial firearms and ammunition. All who responded told us that there would be an initial short-term increase in burden and cost because of the need to re-classify thousands of commodity, software, and technology line items and SKUs affected by the new rules, but that the long-term regulatory burden reduction would significantly outweigh the short-term need to adjust internal compliance programs and practices. There would also be significant short-term costs and burdens associated with the need to become familiar with the nuances of the EAR and new BIS licensing officers. However, this burden, we believe, would be largely addressed by BIS’s long-standing commitment of industry outreach and training resources, which we appreciate. We also believe that DDTC staff will continue their robust outreach and training efforts as well.

Our members understand that there would be no change to the licensing policies for end item firearms and related ammunition. If a gun required a license to export when it was regulated by the State Department then it would require a license to export when it is regulated by the Commerce Department. If an export to a particular destination or end user would have been denied or approved before, it would be denied or approved in the same manner under the new rules. Applications would go through the same interagency review process, including by the Defense Department and also the State Department’s human rights and other experts. Under the new rules, no approvals would be converted to denials or denials to approvals.

Nonetheless, most of our members, particularly the small- and medium-sized companies, believe that the changes will be economically beneficial for them because the eventual regulatory simplification and cost reductions will allow them to consider exporting when they might not have otherwise. Those that already export believe they will be able to expand sales of exports that would have otherwise been approved. They hold these views because BIS and the EAR are simply better able to regulate commercial items than are DDTC and the ITAR. This is not meant to be a slur of DDTC staff, which is excellent. It is merely a reflection of the fact that the ITAR exists to regulate the export of defense articles that provide a significant military or intelligence advantage in a “one size fits all” type approach with regulatory requirements that are more relevant to the export of a fighter aircraft than something that can be purchased at a retail outlet. The EAR exists to regulate dual-use, commercial, and less sensitive military items that warrant control, but in more tailored ways to fit the specific national security and foreign policy, including human rights, issues posed by the items.

These conclusions have been proven thousands of times through the application of similar export control reforms for other sensitive commercial or less sensitive military items that have been transferred to Commerce’s jurisdiction over the course of the last eight years. For example, under the Commerce system, there are no fees to apply for licenses. There are no redundant registration requirements for domestic manufacturers. There are no fees for registration. Such fees are bearable for large companies, but often not for small- and medium-sized companies. The license application forms are vastly simpler. Controls on less sensitive and widely available and basic parts, components, and technology are more tailored and allow for less burdensome trade with close allies through license exceptions. Sales with regular customers can be combined in to fewer license applications, thus reducing overall paperwork to achieve the same policy objectives. **There are many other benefits to the proposed changes as well described in the proposed rules’ preambles, but our essential conclusion is that, particularly with the changes recommended below, they will lead to growth for U.S. companies, more jobs in the United States, and related economic benefits for the cities and states where the members reside while accomplishing the same national security and foreign policy objectives they have always had.**

Notwithstanding our overall approval of the proposed rules, we have the following comments and suggested edits that would make the rules even more efficient and consistent with the overall objectives of the effort.

Specific Comments

I. Proposed Changes to Brokering Provisions in ITAR Part 129

The proposed rule would add “a new paragraph (b)(2)(vii) to §129.2 to update the enumerated list of actions that are not considered brokering [activities]. This change is a conforming change and is needed to address the movement of items from the USML to the CCL that will be subject to the brokering controls, to ensure that the U.S. government **does not impose a double licensing requirement** on the export, reexport or retransfer of such items.” (emphasis supplied). The text of the proposed exception is: “(vii) Activities by persons to facilitate the export,

reexport, or transfer of an item subject to the EAR that has been approved pursuant to a license or license exception under the EAR or a license or other approval under this subchapter.”

The policy goal of not imposing double licensing obligations – i.e., the need to get a license from both State and from Commerce for the same essential transaction – is perfect. The rationalization benefits of the reform effort and the proposed rule would, of course, be ruined if, after the regulatory change, the parties involved in the same essential transaction would need authorizations from two agencies instead of one without the reform. Indeed, State created the entire paragraph (x) concept for each of its USML categories to avoid the need to get a license from State and a license from Commerce for exports that had EAR-controlled items for use in or with ITAR-controlled items in the same shipment.

The proposed (b)(2)(vii) exception text, however, would, in most cases, not eliminate the creation of a double licensing requirement because the scope of “brokering activities” requiring registration, fee payments, and licensing under part 129 includes many types of activities that occur *before* Commerce (or State under a paragraph (x) authority) would issue a license. Such activities include, with respect to the export, reexport, or retransfer of defense services, U.S.- and foreign-origin defense articles, (i) facilitating their manufacture, (ii) financing, (iii) or insuring. With respect to their purchase, sale, transfer, loan, or lease, pre-license brokering activities include (i) soliciting, (ii) promoting, (iii) negotiating, (iv) contracting for, (v) arranging, or (vi) otherwise assisting.

Thus, for example, one wanting to *promote* or *negotiate* the possible sale of a U.S.-origin firearm that transitioned to the EAR (but which would also be identified in USMIL category I(a)) would need to go through the process of registering as a broker with DDTC, pay a registration fee, and get approval from DDTC to do so. This would be a time-consuming and expensive process – and an effort that would become completely moot under the new (b)(2)(vii) exception if and when Commerce later issued a license to the exporter to allow the export of the firearm being promoted or subject to the negotiations.

We can infer why DDTC proposed this provision, which is to ensure that it is able to review and approve brokering activities before an application is submitted because it will not necessarily know then that the license would be approved later. We recognize that brokering activities are separate controlled events from the act of exporting, reexporting, or retransferring an article. Nonetheless, we respectfully submit that for items that would become subject to the EAR (and also identified on the relevant USMIL categories), maintaining this distinction is over-cautious, creates unnecessary regulatory redundancies, and does not advance the policy objectives of the control.

First, the vast majority of licenses for the export of commercial firearms and related items are and would likely continue to be approved without issue. With respect to those licenses that are not approved, the U.S. Government would still get the final say in the act that really matters from a policy and control point of view, which is the actual shipment of the firearm or other controlled item. Thus, the double burden the proposed approach would impose does not seem warranted because the U.S. government will be able to accomplish its ultimate policy objectives at the end of the day by approving, denying, or approving with conditions the actual movement of the

firearm or related item. This would not be the case for items that would not be subject to the EAR.

RECOMMENDATION I: Thus, to accomplish DDTC's policy objectives without creating the possibility of authorization requirements from two agencies, we suggest that the scope of the brokering obligations over items no longer described on the USML but still described on the relevant USMIL categories (i.e., I(a)-(c), II(a), and III(a)) apply only to such items that are not "subject to the EAR." In this way, DDTC would have control over brokering activities over such items in situations where the U.S. Government would not otherwise have jurisdiction over their later reexport or transfer, such as non-U.S. origin items meeting the description of items proposed to move from USML Categories I-III that would also meet the description of items currently on the USMIL's Category I-III. (Again, for all items that are "subject to the EAR," the US government will still be able to regulate the transaction.) To accomplish this relatively simple solution, a suggested edit to the proposed exception paragraph (b)(2)(vii) is:

"(vii) Activities that would or could result in the export, reexport, or transfer of an item 'subject to the EAR.'"

An even simpler approach would be:

"(vii) Activities that involve items 'subject to the EAR.'"

If there were a violation of the EAR later, such as a violation of the terms of a license, then that would be prosecuted in the ordinary course. If DDTC also wanted enforcement authority over brokering violations in connection with a later export in violation of the EAR, it could insert at note along the lines of the following:

"Note to paragraph (b)(2)(vii): This exclusion from brokering activities for items subject to the EAR does not apply if the activities were part of a conspiracy to violate of the EAR."

We are confident that DDTC and the other agencies reviewing this comment may come up with other ideas. We would be open to them so long as they would eliminate the need for parties to get both a State and a Commerce authorization for the same basic transaction. Otherwise, the new rules would largely defeat one of the primary benefits of the proposed regulatory change, which is the consolidation within the Commerce system of control over the commercial firearms and related items that no longer warrant control on the USML.

II. USML Category III Ammunition – Projectiles – Pyrotechnic and Steel Tipped

The revised Category III enumerates pyrotechnic material in several subparagraphs. Subparagraph (a)(1) controls "Ammunition that **incorporates a projectile controlled in paragraph (d)(1) or (3) of this category,**" and subparagraph **(d)(1)** controls "Projectiles that use **pyrotechnic tracer materials** that incorporate any material having peak radiance above 710 nm or are incendiary, explosive, steel tipped, or contain a core or solid projectile produced from one

or a combination of the following: tungsten, steel, or beryllium copper alloys.” (emphasis supplied).

The revised category is specific in that it only controls ammunition or projectiles with pyrotechnic material “having peak radiance above 710 nm”. This indicates that the control is limited to tracer compositions meant for use with night vision optics rather than controlling all tracers. We agree with this approach. Bright tracers have been used for sporting purposes for years to assist shooters in targeting and marksmanship, and therefore as a dual use item are more correctly controlled on the CCL.

However, there is confusion and possible overlap of controls with regard to subparagraph (a)(6), which controls “**Ammunition employing pyrotechnic material in the projectile base and any ammunition employing a projectile that incorporates tracer materials of any type having peak radiance above 710 nm and designed to be observed primarily with night vision optical systems.**” (emphasis supplied).

The first half of this sentence does not include reference to the radiance parameter of “above 710 nm” and indicates control of **any** ammunition with pyrotechnic material in the base. Since all tracer ammunition is manufactured with “pyrotechnic material in the projectile base,” it is not necessary to designate a separate control for ammunition with pyrotechnic material in the base. And, subparagraphs (a)(1) and (d)(1) already control these articles and include the radiance parameter of “above 710 nm.”

The second half of the sentence articulates controls on “any ammunition employing a projectile that incorporates tracer materials of any type having peak radiance above 710 nm and designed to be observed primarily with night vision optical systems.” Since peak radiance above 710 nm is required for tracer ammunition to be suitable for use in night vision devices, having another control separately enumerated in (a)(6) seems redundant.

RECOMMENDATION II.A.: We request DDTC to review subparagraph (a)(6) for possible deletion for the reasons stated above.

Subparagraph (a)(3) controls “Shotgun ammunition that **incorporates a projectile controlled in paragraph (d)(2)** of this category, and subparagraph (d)(2) controls “Shotgun projectiles that are flechettes, incendiary, tracer, or explosive.”

Subparagraph (d)(2) does not include any reference to the parameters included in (a)(6) and (d)(1) i.e. “pyrotechnic tracer materials that incorporate any material having peak radiance above 710 nm”. Shotgun ammunition with tracer material is being produced for sporting use by a Sporting Arms and Ammunition Manufacturers’ Institute member company.

RECOMMENDATION II.B.: We recommend that subparagraph (d)(2) be revised to delete the word “tracer” and replace it with the phrase “that use pyrotechnic tracer materials that incorporate any material having peak radiance above 710 nm” for the reasons explained above and to make subparagraph (d)(2) consistent with the parameters in subparagraph (d)(1).

Subparagraph (d)(1) also controls “Projectiles that are incendiary, explosive, **steel tipped**, or contain a core or solid projectile produced from one or a combination of the following: tungsten, steel, or beryllium copper alloys.” (emphasis supplied).

Steel tipped projectiles are used in armor piercing ammunition. Unlike the federal definition of “armor piercing ammunition,” the revised Category III does not exempt ammunition that the ATF has found is primarily intended to be used for “sporting purposes” per the below definition:

In 18 USC 918(a)(17)(A), the term “ammunition” means ammunition or cartridge cases, primers, bullets, or propellant powder designed for use in any firearm.

(B) The term “armor piercing ammunition” means—

(i) a projectile or projectile core which may be used in a handgun and which is constructed entirely (excluding the presence of traces of other substances) from one or a combination of tungsten alloys, steel, iron, brass, bronze, beryllium copper, or depleted uranium; or (ii) a full jacketed projectile larger than .22 caliber designed and intended for use in a handgun and whose jacket has a weight of more than 25 percent of the total weight of the projectile.

(C) The **term “armor piercing ammunition” does not include** shotgun shot required by Federal or State environmental or game regulations for hunting purposes, a frangible projectile designed for target shooting, **a projectile which the Attorney General finds is primarily intended to be used for sporting purposes**, or any other projectile or projectile core which the Attorney General finds is intended to be used for industrial purposes, including a charge used in an oil and gas well perforating device.

RECOMMENDATION II.C. We recommend that subparagraph (d)(1) be revised to delete the term “steel tipped.” Export controls of articles enumerated in the revised Category III should be consistent with definitions in other parts of federal law. Therefore control of steel tipped projectiles which have been determined to be intended for sporting purposes correctly belongs under the EAR.

III. Recommendations for Effective Date of Final Rule and Allowance for Manufacturing Registrations

RECOMMENDATION III.A. NSSF recommends a 180-day effective date for the final rule. Throughout the Export Control Reform initiative and during transition from the USML to the CCL, the final rule for many other categories had an effective date of 180 days after publication. This gave exporters of those commodities sufficient time to reclassify their products and implement changes in their enterprise systems to become compliant with the EAR. The later effective date also allowed those companies to continue to obtain export licenses from DDTC without loss of business in the interim. The regulatory change for firearms and ammunition will impact many exporters and involve a significant number of export licenses. Most of these companies have had no exposure to the EAR and will require significant training and outreach to understand the new regulations. The extended effective date will allow these firearm and

ammunition exporters sufficient time to learn and implement EAR-centric processes and procedures while still continuing to do business.

RECOMMENDATION III.B. Although the extended period will be beneficial to exporters, it may present issues for small manufacturers and gunsmiths that do not export but are nonetheless required to register with DDTC. Some of these companies may have registration expiration dates within the period prior to the effective date, forcing them to renew a registration which would no longer be required a short time later. Therefore, we also request DDTC make allowance for registration renewal during the 180-day period by extending the expiration dates until after the effective date of the final rule.

IV. Recommendation for Transition of Sound Suppressors to the CCL

NSSF respectfully requests DDTC consider transitioning control of sound suppressors from the USML to the CCL. At a minimum, NSSF requests DDTC to reconsider the current restrictive policy and allow for commercial exports of these items. The proposed rule retains control of silencers, mufflers, and sound suppressors under USML Category I(e). The current DDTC policy restricts exports of these articles to government and law enforcement agencies only. This policy has been in place for more than 15 years, and is largely out of date with the current worldwide sale and use of suppressors for commercial, sporting and hunting purposes.

Suppressors are a simple design consisting of a casing which contains material to absorb some of the gases from escaping from behind the projectile once it leaves the barrel. Suppressors have only a very limited and specialized military utility. The benefit of a suppressor is that it muffles the sound of the shot to a certain extent. The detriment of using a suppressor is that the projectiles lose both range and penetration. And the more effective the sound suppression is, then the less effective the projectile. In fact, government and law enforcement usage of suppressors is limited to special operating units and such.

However, sporting and hunting use of suppressors has been growing for many years. The largest international commercial suppressor markets are the United Kingdom and New Zealand, with smaller markets throughout Europe. In these countries, there are restrictions on how suppressors can be used. For example, in Norway suppressors can be used for hunting only when hunters are a certain distance away from residential areas. In the UK, suppressors are used with 99% of rifles and are considered a good solution to the problem of noise pollution. There were 154,958 firearm certificates on issue by the end of March 2017, representing a total of 559,302 firearms, which is an increase of 4% compared with the previous year. In New Zealand, suppressor ownership and use is legal with no special permit required. Most .22LR rimfire rifles are sold with threaded muzzles for suppressor use. The majority of rimfire suppressors are sourced from China which sells these items for approximately US\$6.00 with an estimated landed cost of US\$10 each. Suppressors for centerfire rifles are gaining in popularity, and local production in NZ is increasing with one-third of NZ produced suppressors being exported to the UK and Europe. The average price for these centerfire suppressors is approx. US\$360.

Within the US, the sporting and hunting use of suppressors has kept to the same trend as the international markets. There are 1.4 million suppressors registered in the U.S. as of April 2017. Our source is the ATF's annual Firearms Commerce in the U.S. publication exhibit 8, page 15: <https://www.atf.gov/resource-center/docs/undefined/firearms-commerce-united-states-annual-statistical-update-2017/download> The 2017 figure is triple the number of registered suppressors as of April of 2013 which was 494,452 units. And the movement of suppressors from the USML to the CCL will have no effect on domestic registration which will still be required.

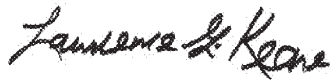

Based on the above data regarding the predominant commercial use of suppressors both in the US and overseas, and in comparison to the limited use of suppressors by select groups in the military or LE, we estimate that there are more suppressors being used now for hunting and sporting purposes than for military or law enforcement purposes. These articles can no longer be considered as having a critical military advantage with such widespread foreign availability. The only effect of restricting U.S. exports of suppressors to government or law enforcement agencies is to block U.S. manufacturers and exporters from participating in these legal and growing foreign markets. This is unfair for U.S. manufacturers who are not allowed to compete with foreign producers. If these articles are legal to own and to use commercially in the foreign country, then DDTC should allow for their export from the U.S.

In addition, there is no technology required or in use that warrants the stricter protections of the AECA. Because of the growing dual-use nature of these articles, export controls more correctly belong under the CCL. Controls on suppressors on the EAR would include both "NS" (national security) and "CC" (crime control), and licensing would still be required, but with allowance for exports intended for sporting and hunting purposes.

Firearms are dangerous. They are used to kill people everyday around the world. They should be subjected to more controls not less. The proposed change in regulations will make the world a far more dangerous place. The proposed rules look to be a for profit act for arms dealers and will do nothing for humanity nor the planet. The bottom line is that switching the regulations of firearms from the State Department to the Commerce Department will facilitate exports to oppressive regimes removing safe guards that keep these crime infested terrorist organizations from obtaining weapons which destabilize countries and cause mass migrations.

I am writing in opposition to the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Currently, firearms exports are classified as military. For this reason, they are under the regulation of the State Department, and Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns.

The Commerce Department does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

This rule change would have the following negative consequences:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms.

Firearms are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

I OPPOSE any legislation that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security. In addition, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. DO NOT ALLOW THIS TO HAPPEN.

I oppose the proposed rule change that would move the handling of export licenses of semiautomatic assault weapons and powerful firearms from the U.S. State Department to the U.S. Commerce Department

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

General Comment

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one elsed asked for it or wanted it. The NSSF, the trade group for the gun industry, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobbys influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for household use, they were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. If you go forward with this disastrous policy, I will do everything in my powerpeacefully and democraticallyto hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and clean house.

General Comment

I am writing to OPPOSE the transfer of authority over arms exports to the Department of Commerce from the State Department. As a resident of the District of Columbia, I have no voting representative in the Congress, so I am making my voice heard directly, here and now.

Firearms are the instrumentalities of war: war is evil, and the best way to avoid it is to undertake to understand and combat the sources of war. Treating the export of firearms as a mere form of commerce is shortsighted, stupid and vile. The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

I have seen war in Vietnam as a journalist; I have tried to combat its aftereffects in the Balkans. Particularly in the latter, control of arms would have limited, to some extent, the predations on the civilian populations. I am utterly opposed to this change: keep firearms export controls in the hands of diplomats, not salesmen.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

DDTC Letter Docket DOS-2017-0046 6 July 2018

SPORTING ARMS AND AMMUNITION MANUFACTURERS' INSTITUTE, INC.
SINCE 1926

July 6, 2018

By E-mail: DDTCPublicComments@state.gov subject line, "ITAR Amendment – Categories I, II, and III"

By Internet: Federal eRulemaking Portal: www.regulations.gov - Docket DOS-2017-0046

Directorate of Defense Trade Controls
U.S. Department of State
2401 E. Street, N.W.
Washington, DC 20226

REFERENCE: Proposed Rule – International Traffic in Arms Regulations: U.S. Munitions List Categories I, II, and III,

Dear Sir:

The Sporting Arms and Ammunition Manufacturers' Institute (SAAMI) respectfully submits the following comments to the above referenced Federal Register notice of proposed rulemaking 83 FR 24198, dated May 24, 2018. SAAMI is an association of the nation's leading manufacturers of firearms, ammunition and components, and an American National Standards Institute (ANSI) accredited standards developer. SAAMI was founded in 1926 at the request of the federal government and tasked with creating and publishing industry standards for safety, interchangeability, reliability and quality, coordinating technical data and promoting safe and responsible firearms use.

As the organization responsible for creating manufacturing standards for the firearm and ammunition industry, SAAMI is uniquely qualified to provide technical expertise on this matter. We have reviewed the proposed rule, and agree in general with the transition of the majority of firearms and ammunition to the Commerce Control List. Export controls of commercial firearms and ammunition which are not inherently military, have no critical military or intelligence advantage, and have predominant commercial applications correctly belong under the Export Administration Regulations (EAR).

We would like to raise the following points regarding several items enumerated in the revised Category III — Ammunition and Ordnance and ask for revision or reconsideration.

Pyrotechnic Tracer Materials

1. Subparagraph (a)(1) controls "Ammunition that incorporates a projectile controlled in paragraph (d)(1) or (3) of this category," and subparagraph (d)(1) controls "Projectiles that use pyrotechnic tracer materials that incorporate any material having peak radiance

above 710 nm or are incendiary, explosive, steel tipped, or contain a core or solid projectile produced from one or a combination of the following: tungsten, steel, or beryllium copper alloys.”

Subparagraph (a)(6) controls “**Ammunition employing pyrotechnic material in the projectile base** and any ammunition employing a projectile that incorporates tracer materials of any type having peak radiance above 710 nm and designed to be observed primarily with night vision optical systems”.

By including the peak radiance parameter of “above 710 nm”, we note DDTC’s intention to control only tracer compositions that emit primarily in infrared which are for use with night vision devices. Such dim tracers, with infrared wavelengths from 710 nm to 1 millimeter, burn very dimly but are clearly visible through night vision equipment. This differentiates from bright tracers, which are the most common type of tracer, or subdued tracers, both of which can overwhelm night vision devices, rendering them useless.

Small arms tracer ammunition that includes pyrotechnic material below peak radiance of 710 nm has been sold commercially for sporting purposes for many years. For example, it is used as a training aid for marksmanship proficiency. We agree with the proposed rule which would maintain control on the USML of dim tracer ammunition with peak radiance above 710nm.

However, we wish to comment on the following:

- a. In subparagraph (a)(6) the radiance parameter of “above 710 nm” is not applied to the first part of the control sentence. As currently written, the phrase “ammunition employing pyrotechnic material in the projectile base” would be interpreted to include all tracer ammunition because the radiance parameter “above 710 nm” is not present in the phrase. Also, pyrotechnic tracer material is only employed in the projectile base, and therefore it is not necessary to enumerate a separate control specifying “pyrotechnic material in the projectile base”.
- b. We note some overlap in controls in subparagraphs (a)(1) and (a)(6). Subparagraph (a)(1) controls ammunition with projectiles controlled in subparagraph (d)(1) which includes “projectiles that use pyrotechnic tracer materials that incorporate any material having peak radiance above 710 nm”, i.e. tracer projectiles. Subparagraph (a)(6) controls “...any ammunition employing a projectile that incorporates tracer materials of any type having peak radiance above 710 nm” which is already controlled in (a)(1) with reference to (d)(1). The only differentiation we note would be reference to ammunition “designed to be observed primarily with night vision optical systems”.

RECOMMENDATION: We recommend subparagraph (a)(6) be revised to delete the phrase “ammunition employing pyrotechnic material in the projectile base”. First, it is not necessary to articulate pyrotechnic material in the projectile base, and deletion of this phrase would remove the confusion that (a)(6) controls all ammunition with pyrotechnic

material including that with peak radiance below 710 nm. Second, the phrase is redundant since such ammunition with pyrotechnic material is controlled under (a)(1). We also request DDTC to provide clarification on which articles would be individually controlled under subparagraphs (a)(1) and (a)(6) since both control ammunition with pyrotechnic/tracer projectiles with a radiance parameter intended for use with night vision devices.

2. Subparagraph (a)(3) controls “Shotgun ammunition that incorporates a projectile controlled in paragraph (d)(2) of this category”, and subparagraph (d)(2) controls “Shotgun projectiles that are flechettes, incendiary, tracer, or explosive.”

We note that this paragraph does not include the parameter “pyrotechnic tracer materials that incorporate any material having peak radiance above 710 nm”. A SAAMI member company is currently producing shotgun ammunition with tracer projectiles for commercial use.

RECOMMENDATION: We reiterate our comments above regarding tracer ammunition, and recommend subparagraph (d)(2) be revised as follows: “Shotgun projectiles that are flechettes, incendiary, explosive, or that use pyrotechnic tracer materials that incorporate any material having peak radiance above 710 nm.” This change would make subparagraph (d)(2) consistent with the parameters in subparagraph (d)(1).

Non-metallic Cases

Subparagraph (a)(5) lists “Ammunition, except shotgun ammunition, based on non-metallic cases, or non-metallic cases that have only a metallic base, which result in a total cartridge mass 80% or less than the mass of a brass- or steel-cased cartridge that provides comparable ballistic performance.” Subparagraph (d)(8) controls “Non-metallic cases, including cases that have only a metallic base, for the ammunition controlled in paragraph (a)(5) of this category.”

This control would include plastic cartridge cases that fit the mass parameters shown. Polymer-cased ammunition (PCA) is currently sold to consumers in the commercial market, and is increasing in popularity. It is considered an alternative to reduce cost and weight in ammunition. This type of ammunition has a significant benefit to the environment and to firearm ranges by reducing both waste and the environmental impact and footprint of hunters and shooters. Controlling PCA under the ITAR would hinder further technological development in this area.

We recommend that control for non-metallic ammunition be removed from the USML and transitioned to the CCL to be controlled with similar metallic cartridge ammunition. Non-metallic cased ammunition is in development by several SAAMI members for sporting and hunting purposes. PCA meets SAAMI specifications for ballistic performance. Revised Category III should only include articles which are inherently military, and PCA does not meet that definition. New ECCN 0A505 on the CCL will control metallic cartridge ammunition (e.g. .308 Winchester) regardless of whether it is used in semi-automatic rifles for sporting use, or in

full-automatic rifles for military use. Therefore, controls for non-metallic cartridges should be the same. To effect this change, we recommend deletion of subparagraphs (a)(5) and (d)(8).

Primers

Subparagraph (d)(10) controls "Primers other than Boxer, Berdan, or shotshell types."

This description appears to except all primers used by SAAMI members. We believe DDTC's intent here is to control tubular primers used in medium or large caliber ammunition, which SAAMI members do not use in the manufacture of ammunition for sporting arms. We suggest that the designation of primer types could be simplified. Boxer, Berdan, shotshell and muzzleloading percussion caps are all called "cap type" primers by the Department of Transportation, and are classified as UN 0044, "Primers, cap type." We recommend DDTC consider using this description to define primers which would not be controlled on the USML.

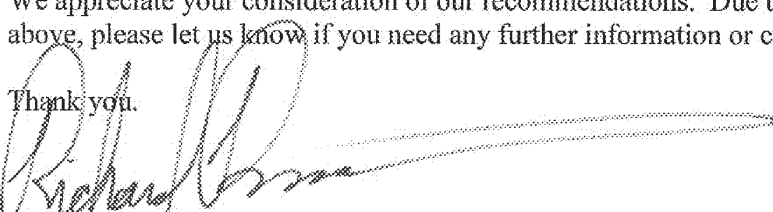

Technical Data

Subparagraph (e) controls technical data and defense services directly related to the defense articles enumerated in paragraphs (a), (b), and (d) of this category.

This exemplifies the need to make the changes we recommend above regarding pyrotechnic tracer material and non-metallic cases. Technical data related to these items is already in the public domain and well-known. Therefore, it should not be controlled on the USML.

We appreciate your consideration of our recommendations. Due to the technical nature of the above, please let us know if you need any further information or clarification for your review.

Thank you.

Richard Patterson
Executive Director

General Comment

I oppose the proposed rule and urge you to abandon the proposal that will make it easier to export semi-automatic weapons and ammunition, eliminate Congressional oversight of these sales, weaken end-use controls, and enable production of 3D weapons anywhere.

Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns,

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers and the gun exporters that benefit from these sales should bear this cost. National laws for brokers and financiers who arrange firearm shipments are a weak link in curtailing trafficking of small arms and light weapons. Firearms brokers would no longer be subject to US brokering laws which would make it easier for unscrupulous dealers to escape attention. The rule reduces end-use controls and public reporting on gun exports and human rights violations.

The transfer of licensing to Commerce will remove new exporters and brokers from the State Department database, weakening enforcement against arms trafficking. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The Commerce Department does not have resources, data, expertise or institutional relations to enforce export controls.

The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries. This rule would transfer gun export licensing to an agency the Commerce Department - whose principle mission is to promote trade.

Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights. Military assault style firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. The export of these weapons should NOT be subject to weaker controls.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

First let me say that this is a totally crazy idea that's proposed. I personally like the fact that with the State Department in control of the the semi-automatic assault and other powerful weapons export licenses that Congress is always notified of sales of large numbers of these types of weapons to foreign countries and can override the sale if needed.

Here are 3 ways that I see this rule change as being harmful to the welfare of all US citizens:

- 1) It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- 2) It would remove licensing requirements for brokers, increasing the risk of trafficking.
- 3) It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

General Comment

The proposed rule change does the following and is unacceptable:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Please reject this change.

General Comment

I oppose the DOS proposed rule on international traffic in arms regulations for US munitions list categories I, II & III. On May 24, the Trump administration proposed to make it easier to export U.S. guns and ammunition globally, even though U.S.- exported firearms are already used in many crimes, attacks and human rights violations in many other nations. Action under the rule if it is enacted will endanger lives merely to enrich munitions dealers. The Trump administration proposal applies to assault weapons and other powerful firearms, moving export licenses from the State Department to the Commerce Department. The U.S. gun lobby has advocated for these policies. The Department of Commerce estimates that the transfer of authority will increase the number of export applicants by 10,000 annually, but the Commerce Department does not have the resources to enforce export controls, even now.

The proposed rule change:

- 1.Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- 2.Eliminates Congressional oversight for important gun export deals.
- 3.Transfers the cost of processing licenses from gun manufacturers to taxpayers.
- 4.Removes statutory license requirements for brokers, increasing risk of trafficking.
- 5.Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
- 6.Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
- 7.Reduces transparency and reporting on gun exports.
- 8.Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

I strenuously object to any action of my government that makes the distribution of military style weapons - or for that matter ANY weapons - easier than it currently is. Our nation does not need to be exporting the violence that our gun culture causes here to infest other nations. The current proposal to shift control to the Commerce Department blatantly prioritizes gun dealer and manufacturer profit over civilization and safety.

The current proposal:

- Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- Eliminates Congressional oversight for important gun export deals.
- Transfers the cost of processing licenses from gun manufacturers to taxpayers.
- Removes statutory license requirements for brokers, increasing risk of trafficking.
- Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
- Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
- The Commerce Department does not have the resources to enforce export controls, even now.
- Reduces transparency and reporting on gun exports.
- Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

I do not want my country to stand before the world as preferring money to human rights!

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

We do not want to make it easier for terrorists to purchase US firearms and use them against their own people or the United States.

Beth Katz Public Comment on State Dept ITAR USML Cat I-III

July 6, 2018

To: Office of Defense Trade Controls Policy, U.S. Department of State
Regulatory Policy Division, Bureau of Industry and Security, U.S. Department of Commerce

In Reference to **FRN 2018-10366** (State) and **83 FR 24166** (Commerce).

I am writing to express my opposition to the proposed regulatory changes published in the Federal Register on May 24, 2018, as "International Traffic in Arms Regulations: U.S. Munitions List Categories I, II, and III" (DOS FRDOC_0001-4527) and "Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control Under the United States Munitions List (USML)" (83 FR 24166). The proposed changes raise significant concerns for me as a parent, as an American citizen and taxpayer, and as someone who has studied and wrote my graduate thesis on the international small arms trade.

As a parent of a young child, I am deeply concerned about the impact that these changes will have on both global and domestic security for the foreseeable future. The proposed changes would greatly diminish oversight of the export of semi-automatic assault weapons, high capacity ammunition clips and training on such military equipment. The suggested changes would make it more likely that these dangerous weapons will end up in the hands of traffickers, terrorists or cartels and used against US service members. This increases the likelihood for greater destabilization and conflict worldwide as well as for these weapons to be trafficked back into the U.S. for nefarious uses here. The new rule also removes the block on 3D printing of firearms. This will facilitate unregulated gun production in the U.S. and abroad by making it possible for anyone, anywhere, with access to a 3D printer to produce a lethal weapon. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, these changes could generate many preventable tragedies. These proposed changes will create a world that is less safe for my son and other children to grow up in and to live; and therefore should not be adopted.

As an American citizen, I believe that these proposed changes diminish U.S. credibility in the eyes of the international community and compromise our global leadership. The proposed changes call for transferring gun export licensing from the State Department, an agency with a mission to promote stability, conflict reduction, and human rights, to the Commerce Department, an agency with mission to promote trade. In doing this, we are retreating on our global commitment to human rights and acting as though the export of firearms is just another commodity when the impact of these weapons is far more consequential and deadly. Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research shows that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are sought out weapons used by criminal organizations in Mexico and other Latin American countries to perpetrate most of the increasing and record levels of homicides in those countries. The U.S. should not be adopting policies like the proposed changes which amplify this. Rather, we should be working collaboratively, as we have under previous administrations, to find ways to prevent and reduce firearms from being used to carry out human rights violations and crime.

As a U.S. taxpayer, I also find these proposed changes to be fiscally irresponsible. The new rule would transfer the cost of processing licenses from gun manufacturers to U.S. taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of

tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and the Commerce Department does not charge any fee for licensing. This means that U.S. taxpayers, such as me, will absorb the cost of reviewing applications and processing licenses rather than the gun exporters that benefit from these sales. In addition, U.S. taxpayers also will need to shoulder the costs of having to build the capacity and expertise of the Commerce Department to properly administer the proposed changes. The Commerce Department currently does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce (see Department of Commerce Budget in Brief FY2017, p. 57, <http://www.osec.doc.gov/bmi/budget/FY17BIB/AllFilesWithCharts2.pdf>). The Commerce Department's Bureau of Industry and Security's enforcement office, who would be charged to oversee the new changes, does not have staff in Latin America, Africa, or many other parts of the world and is not equipped to take the same level of preventive measures for end-use controls. In stark contrast, the State Department, who oversees these items while they reside on the USML, has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to control and verify end uses and end users. The Commerce Department does not have these resources and developing them will come at a substantial cost to U.S. taxpayers.

Finally, as someone who has studied and researched the international small arms trade, I can confidently say that greater regulation, not less as the proposed rule would enable, is needed to curb the disproportionate impact that these weapons have on fueling conflict, terrorism, and crime around the world. One particularly troubling part of the new rule is its reduction of end-use controls for gun exports. It would eradicate the State Department's Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department within State that compiles the U.S. Government's information on human rights violations, decreasing the ability to effectively stop weapons licenses from going to international human rights violators. End-use controls also are weakened by removing the registration of firearms exporters, a requirement since the 1940s. Under the current rules, registration of exporters lets the State Department check an exporter's history whenever a manufacturer or broker requests a license for a particular gun export sale. Migrating the licensing to the Commerce Department will remove new exporters and brokers of these firearms from the State Department database, losing an important part of the evidentiary trail that enables the prosecution of arms traffickers.

It is for all the reasons listed above that I urge you to reject the proposed changes and to keep the items currently listed on the State Department-administered US Munitions List (USML) intact.

Thank you for your time and consideration.

Sincerely,

Beth Katz
Omaha, Nebraska

The proposed change from the State Department to the Commerce Department overseeing the exports of firearms is a change from a department that has the necessary staff, knowledge and experience to properly handle such exports to an department which has neither the necessary staff, knowledge and experience and the consequences will be fraught with problems.

In addition as the NRA is in favor of this proposed change it should be a concern the prime motivation is for further accelerated proliferation of guns and greater profits for gun manufacturers, along with increased violence and mayhem in the rest of the world.

Thus, this change has no merit and must be summarily rejected.

General Comment

American has seen the bloody and horrifying cost of unregulated guns in our country. The rest of the world must not suffer needless injuries and death from gunshot wounds simply so American gun manufacturers can make more money.

I oppose moving export license oversight for firearms from the Department of State to the Department of Commerce. The proposed rule change eliminates necessary Congressional oversight for important gun export deals; places the cost for processing licenses on the taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change benefits the profits of American gun makers at the cost of lives around the world.

General Comment

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Thank you.

General Comment

There is no need to impose our 'gun culture' on other countries. In fact, it is far beyond time to repeal the 2nd Amendment as it pertains to private citizens.

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries. Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

I could not be more vehemently opposed to this!! Making it easier for people around the world to have dangerous weapons is, at the least, counterintuitive!! We are already suffering from our mistakes with guns being trafficked to Mexico and Latin America, resulting in the migration of those seeking asylum in the U.S. to escape the violence of gangs and cartels. Let's learn from these and other mistakes, such as arming the Afghans many years ago!

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

I am against any and all changes, moves from one agency, that is for the protection of citizens, to another agency that only wants to give extreme monetary gain to gun makers and sellers, with no thought of the possible threat to thousands of innocent peoples lives! Also, the dropping of non- automatic ASSAULT-RIFLES and the LARGER SIZED CLIPS, by their names alone point to their military use, and not to their use for hunting, unless you want to add that hunting and killing whole herds of deer, elk, mountain goats, moose, bears etc. is what you call hunting! There has always been a limit to the number of animals hunted by individual hunters. The word, Assault, used with any guns, has the meaning of attacks upon groups, or masses of individual beings, and those beings are most likely to be humans, there-fore, it is a weapon of mass killing, or murder, if used with regular citizens, as the perpetrator. The complete, Trump Proposal, should be dropped in the nearest trash bin!

I am very concerned about the proposed change to easier to spread murder weapons legally across the world, just because the gun industry wants to make more profit. This is not in our interest as a nation, to be complicit in increasing homicide rates abroad. Some of the reasons to not approve this proposed rule change are:

- 1) Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- 2) Eliminates Congressional oversight for important gun export deals.
- 3) Transfers the cost of processing licenses from gun manufacturers to taxpayers.
- 4) Removes statutory license requirements for brokers, increasing risk of trafficking.
- 5) Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
- 6) Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
- 7) The Commerce Department does not have the resources to enforce export controls, even now.
- 8) Reduces transparency and reporting on gun exports.
- 9) Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Thanks for this opportunity to share my views as a citizen and voter, and to allow me to express my desire to make the world a safer place, not one where firearms end the lives of thousands every year.

General Comment

In a free capitalist society companies have and do lobby aggressively for total unregulated ability to sell their wares inside and outside the country. Most products that are likely to cause danger to others or to consumers are highly regulated and rightly so like automobiles, medicines and even foods. This protection of the American and world consumer is inherent to the U. S. capitalist core. One exception is guns. Why?

Reasons abound. The point though is about the legality and morality of both selling internally and exporting to the world without logical restrictions of highly dangerous guns and war-caliber weapons to regular citizens in the name of a companys right. What about the right to protect consumers, families and communities? The government has both the economic and moral obligation to protect consumers and all citizens. The recent past legislation expired in the late 1980s that prohibited the sale of automatic and other war-calibre weapons to regular citizens inside and outside the U. S. was a bi-partisan agreement, totally in line with the U. S. Constitution. It is not a coincidence that violence in the last 20+ years has dramatically increased both in the U. S. and is currently ravaging neighboring countries. Unfortunately, this tragedy is largely caused by U. S. supplied and free-flowing arms that have no reason to be in the hands of law abiding citizens and even less accessible to dubious groups. Governments law enforcing forces are overextended and often are part of the many victims high-powered guns enable. A safety-driven and regulated gun industry is otherwise feasible.

Exporting the U. S. phoneme of mass shootings (it does not happen around the world; only with recent terrorist groups), increased violence facilitated by easy availability of guns that should only be allowed in case of war, higher risks of gun-assisted suicide and young violence are against every Americans safety. Similarly, expanding a market of death and violence by U. S. companies does not make any sense.

Restate previous limits for starters. Show what American capitalism is really all about, growing wealth and prosperity peacefully. Regulation of danger is part of this.

I strongly OPPOSE switching the regulation of firearms exports from the State Department to the Department of Commerce. It would remove the State Department's ability to restrict 3D printing of weapons and open the floodgates for more weapons domestically and internationally; It would remove licensing requirements for brokers; and it would stop the program that inspects pre-license guns and issues reports. Without the State Department oversight and regulatory authority, firearms will be exported to anyone with money and contribute to organized crime and terrorism.

There is NO need to switch control of the export of firearms unless it is to pay for firearms lobbyists.

This is just another ruse by the NRA to gain more control and

have less oversight into their actions. PLEASE DO NOT APPROVE THIS MOVE.

Sincerely, a concerned citizen

Judith Weeks

I am opposed to the proposal to transfer firearms export to the Department of Commerce for these reasons:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

General Comment

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

General Comment

I am extremely concerned about these proposed rule changes. Overseas weapons sales are not just simple financial transactions with little or no consequences if goods are ultimately resold or otherwise passed along to third parties. Allowing weapons to leave these borders should require extra oversight to make sure that we do not inadvertently cause problems diplomatically or allow our troops do not find themselves under attack from our own weapons. These are complex matters that require a careful weighing of many interests. The system currently in place, with the State Department providing oversight, is better able to address the myriad of concerns. The Commerce Department simply is incapable of bringing the same degree of insight to these matters as their focus is only on the monetary, rather than the practical implications for foreign policy and national security. The president and those in his administration like to talk about their concern for national security, but these proposed changes suggest otherwise. I trust actions, not empty words. These changes should not be adopted.

Name: Neta Jackson

General Comment

My name is Neta Jackson, and I live in the Chicago area. I am very concerned about having common sense gun control and oversight of the gun industry, which in no way robs our citizens of their rights under the Second Amendment.

I oppose the proposed rule and urge you to abandon the proposal that will make it easier to export semi-automatic weapons and ammunition, eliminate Congressional oversight of these sales, weaken end-use controls, and enable production of 3D weapons anywhere.

Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers and the gun exporters that benefit from these sales should bear this cost. National laws for brokers and financiers who arrange firearm shipments are a weak link in curtailing trafficking of small arms and light weapons. Firearms brokers would no longer be subject to US brokering laws which would make it easier for unscrupulous dealers to escape attention. The rule reduces end-use controls and public reporting on gun exports and human rights violations.

The transfer of licensing to Commerce will remove new exporters and brokers from the State Department database, weakening enforcement against arms trafficking. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The Commerce Department does not have resources, data, expertise or institutional relations to enforce export controls.

The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries. This rule would transfer gun export licensing to an agency the Commerce

Department - whose principle mission is to promote trade.

Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights. Military assault style firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. The export of these weapons should NOT be subject to weaker controls.

Thank you!
Neta Jackson

General Comment

I am strongly opposed to this rule change and ask that regulations of firearms remain under the jurisdiction of the State Department. The sale of firearms to other countries is a matter of national security, and it is not only inappropriate but dangerous for these sales to be regulated by the Commerce Department. The dangers this rule change pose include firearms reaching oppressive regimes, organized crime, and terrorists, as well as 3-D printing of firearms. There is no justification for this rule change - the profits of gun manufacturers and their lobbyists do not justify the increased danger to Americans and our national security that this proposed rule change poses.

I am deeply concerned by the proposal to move firearms from ITAR to EAR.

I work in the space industry, where we must be exceptionally careful in our handling not only of materials but of knowledge concerning anything that could be used in a weapons system. We are taught that a rocket, even one designed for peaceful purposes, is to be treated as a potential missile.

If ITAR regulates potential weapons, it ought to regulate actual weapons. If it doesn't, perhaps we should be looking at sharing more of our space technologies (which aren't weapons) with the rest of the world.

Moreover, the State Department not Commerce ought to have the final say on where weapons are exported and by whom, as weapon export has an obvious effect on our ability to participate in diplomacy.

General Comment

I am opposed to the proposed rule change being sought by the State Department. This is a dangerous move by the State Department which will create more gun violence for other countries involved in the sale of US made firearms and munitions. Semi automatic assault rifles should not be reclassified by the Dept. of State as "non-military" type arms. Members of the US military, as well as groups engaged in armed conflict around the world. The proposal to essentially transfer the cost of processing licensing fees from gun manufacturers to taxpayers is unacceptable. Taxpayers should not have to bear the financial cost of the transactions which companies that sell guns engage in. The removal of statutory license requirements for brokers increases risk of trafficking of these firearms. Businesses in the United States should be able to sell guns to foreign governments, but under the assurance that the weapons sold will not fall risk to trafficking. This proposal enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. I am firmly opposed to removing this current prohibition on the 3D printing of firearms. We do not need to add even more enforcement responsibilities to the Dept. of Commerce when it currently has a hard time regulating current export controls. This provision transfers gun export licensing from an agency with a mission of promoting stability, conflict reduction, and human rights, to an agency with mission to promote trade. I, as a private citizen and a taxpayer am against all potential changes which the Department of State has proposed with regards to the exporting of firearms and munitions.

Dear DOS,

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. I am weary of being taxed for things like a processing license, or eliminating Congressional oversight, not to mention 3D printing of firearms. The rule change will profit the American gun industry while not a penny will be aimed toward anything that might assist the victims of gun violence.

General Comment

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change increases the profits to the American gun industry while the entire world pays the cost in lives. Isn't it bad enough that our country is awash in deadly weapons used indiscriminately?! Why inflict this on other countries who could easily use them the same way and promote fear and bloodshed there? The arms industry has already made more than enough profits on the death of innocents!!

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

I opposed this proposed rule for the following reasons:

- >Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- >Eliminates Congressional oversight for important gun export deals.
- >Transfers the cost of processing licenses from gun manufacturers to taxpayers.
- >Removes statutory license requirements for brokers, increasing risk of trafficking.
- >Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
- >Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
- >The Commerce Department does not have the resources to enforce export controls, even now.
- >Reduces transparency and reporting on gun exports.
- >Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

I urge you to oppose this legislation.

Thank you!

I totally disagree with moving this to the Commerce Dept! We cant control the massive amount of guns and killings here and to make it easier to export puts other people and countries at risk. Its shameful to want to profit more by causing deaths! What has this administration become?? Ruthless, heartless, immoral, NOTHING like the Republican Party I once knew! Below are additional reasons why this shouldnt happen.

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries. Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

General Comment

I oppose the proposed rule primarily because it eliminates congressional oversight, transparency and reporting of gun export transactions. Further the proposal would enable unchecked gun production in the U.S. and uncontrolled exports abroad by removing the restriction on 3D printing of firearms.

Further, there is no valid or rational reason for the proposed rule's treatment of semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

Statutory license requirements for brokers, an important check on trafficking of the regulated categories of weapons, would be eliminated by the proposed rule with no alternative means of such control to replace the present licensing system.

The proposed rule, if enacted, would serve only the commercial interests of weapons manufacturers, not the interests American gun owners, the general public in the U.S. or those in other countries and regions experiencing or at risk of civil wars, criminal gang violence and intimidation by unpoliced civilian actors.

I am writing in opposition to the proposal for the U.S. to become a major international weapons dealer.

The proposed rule changes are wrong and dangerous for many reasons including:

- Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

- Eliminates Congressional oversight for important gun export deals.

- Transfers the cost of processing licenses from gun manufacturers to taxpayers.

- Removes statutory license requirements for brokers, increasing risk of trafficking.

- Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

- Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

- T--he Commerce Department does not have the resources to enforce export controls, even now.

Please do not go forward with this proposed change in rule.

General Comment

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

General Comment

I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.[2] Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government i.e., taxpayers will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.

National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain

rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers of these weapons to register and obtain a license, increasing the risk of trafficking. That will make it easier for unscrupulous dealers to escape attention.[3]

The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The Commerce Department is unlikely to make the same argument once those weapons are transferred to their control. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms in the U.S. and around the globe. By effectively eliminating many means to de

General Comment

I wish to comment on the proposal making it easier to export U.S. guns and ammunition globally.

As a parent and a grandparent, this is an issue I feel very strongly about.

I have read that this proposal classifies semi-automatic assault rifles as non-military when they are used by our army. They are also used by opposing forces in armed conflicts, and are prohibited for civilian possession in many countries.

It would remove Congressional oversight for important gun export deals.

Taxpayers would have to pay processing licenses instead of gun manufacturers.

It removes statutory license requirements for brokers, increasing risk of trafficking.

I understand that the Commerce Department does not even have the resources to enforce export controls, as it is.

It reduces transparency and reporting on gun exports.

There are many other reasons that I know the above proposal is a very bad idea that will cost untold lives.

Please reconsider this ill timed and very unwise proposal.

THIS IS VERY DANGEROUS!!! BESIDES HAVING TAX PAYERS PAY FOR TAXES INSTEAD OF GUN MANUFACTURERS. SELLING GUNS NEED MORE REGULATION, NOT LESS. THIS WOULD PUT GUNS EASILY INTO THE HANDS OF TERRORISTS.
NO. NO. NO.

I am totally opposed to the proposed rule for the following reasons:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

It's time to put a check on the American gun industry. It's bad enough that they take no responsibility for all the fatalities caused by guns in this country, and it should not be easy for them to export death across the world.

I oppose moving export license oversight for firearms from the State Department to the Commerce Department.

General Comment

I oppose the proposed rule and urge you to abandon the proposal that will make it easier to export semi-automatic weapons and ammunition, eliminate Congressional oversight of these sales, weaken end-use controls, and enable production of 3D weapons anywhere.

Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns,

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers and the gun exporters that benefit from these sales should bear this cost. National laws for brokers and financiers who arrange firearm shipments are a weak link in curtailing trafficking of small arms and light weapons. Firearms brokers would no longer be subject to US brokering laws which would make it easier for unscrupulous dealers to escape attention. The rule reduces end-use controls and public reporting on gun exports and human rights violations.

The transfer of licensing to Commerce will remove new exporters and brokers from the State Department database, weakening enforcement against arms trafficking. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The Commerce Department does not have resources, data, expertise or institutional relations to enforce export controls. The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries. This rule would transfer gun export licensing to an agency the Commerce Department - whose principle mission is to promote trade.

Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights. Military assault style firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. The export of these weapons should NOT be subject to weaker controls.

The last thing the U.S. needs is to make it easier for businesses to supply powerful assault weapons to the world's most unstable munitions buyers. Do not enact this legislation because it:

- *Treats semi-automatic assault rifles - developed for wartime use - as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

- *Eliminates Congressional oversight for important gun export deals.

- *Transfers the cost of processing licenses from gun manufacturers to taxpayers.

- *Removes statutory license requirements for brokers, increasing risk of trafficking.

- *Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

- *Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The Commerce Department does not have the resources to enforce export controls, even now. This exemption for a new manufacturing technology cannot be applied to weapons production, if we are to consider ourselves as Americans responsible world diplomats.

- *Reduces transparency and reporting on gun exports.

- *Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Do not re-direct us on a path to a more violent world, particularly not with taxpayer dollars.

Is this really a good way to export American values around the world?
Isn't this just yet another result of powerful lobbying activities by gun manufacturers to increase sales?
What possible good can come of this other than increasing the profits of the gun industry?
Wouldn't it be better to promote American values in the form of diplomacy, educational exchanges, artistic exchanges?
We should be making it more difficult to obtain these weapons rather than easier if we are truly interested in a more peaceful world.

I oppose re-classifying these regulated weapons from where they are now: "military", under export regulation by the State Department, to the regulation by the Commerce Department. The Commerce Department does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. That means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

As "military", these regulated weapons are under the regulation of the State Department, and Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

This rule change would make the world a far more dangerous place:

1 It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

2 It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

General Comment

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change increases the profits to the American gun industry while the entire world pays the cost in lives. We are already fueling too much violence around the world with our arms sales, including weapon sales that support the violence in our neighbor, Mexico.

**Re: Docket No. DOS-2017-0046; RIN 1400-AE30; International Traffic in Arms
Regulations: U.S. Munitions List Categories I, II, and III**

Dear Mr. Monjay:

I am writing on behalf of the National Rifle Association (NRA) to provide the association's comments on the above proposed rule (the proposal). With some six million dues-paying members, the NRA is America's premier defender of the civil right protected by the Second Amendment. Our members include individuals and businesses that would be directly affected by the changes in the proposal, including gunsmiths, firearm instructors, journalists and writers covering firearm technology and development, hunters, competitive shooters, and manufacturers.

The NRA is very pleased to see that the project of Export Reform has finally circled back to the place where it began, with proposed amendments to Categories I, II, and III of the U.S. Munitions List (USML). These were among the first of the changes planned for the large-scale undertaking to update export controls on dual-use items, and rightly so. The Second Amendment protects an individual right to possess and carry firearms in case of confrontation, extending to

arms in common use among the population for lawful purposes.¹ America boasts hundreds of millions of privately-owned firearms² and a robust “gun culture” that has produced countless books, magazine articles, videos, websites, online forums, etc., that exhaustively detail firearm technology and use. It is difficult to imagine any information about the design, development, production, manufacturing, and use of firearms that is not already within the public domain. This same information is commonly available overseas, as are the types of firearms and ammunition the proposal would move off the USML and onto the Commerce Control List (CCL). Meanwhile, the might and sophistication of the U.S. military – as well as America’s armed populace – ensure that no foreign enemy wielding the type of arms at issue in these proposed amendments to the USML could pose a serious threat to this nation’s security.

Of course, movement of commonly-available firearms and ammunition to the CCL would not leave their export unregulated. America already has one of the most well-established and closely-administered systems of regulation for commercial production and distribution of firearms and ammunition in the world, and the proposal would not change that. It is clear from the companion rulemaking published by the Commerce Department that items moving off the USML would remain closely controlled, with the necessity of export licenses remaining the norm. Foreign individuals’ access to firearms and ammunition would also remain regulated under the federal Gun Control Act and the National Firearms Act. Furthermore, the Commerce Department has long regulated exports of various shotguns, as well as their parts, components, accessories, and ammunition. Thus, it has existing knowledge of and relationships with many of the entities the proposal will affect. Those entities, in turn, will also have some familiarity with the Department’s regulatory environment and procedures.

The NRA believes that, on the whole, the proposal correctly balances the imperatives of national and global security, allocation of oversight resources, and promotion of American industry, innovation, and competitiveness. We do, however, think it could be improved in several particulars. We also believe that the timing for the implementation of the rule deserves careful consideration.

Specifically, our concerns involve the following:

- * **The retention of firearm sound suppressors on the USML is contrary to the guiding principles of Export Reform and does not serve its purposes.** Suppressors should also be moved to the CCL, unless they are specifically designed for use only with firearms that remain on the USML.

¹ *District of Columbia v. Heller*, 554 U.S. 570, 592, 624-25 (2008). *See also McDonald v. Chicago*, 561 U.S. 742 (2010) (Second Amendment right to keep and bear arms is fully incorporated against state and local action by virtue of the Fourteenth Amendment).

² The Small Arms Survey estimates that as of the end of 2017, there were 121 firearms for every 100 residents in the U.S., for a total of some 393.2 million guns. The program director for the Small Arms Survey Institute notes, however, that “there is no direct correlation at the global level between firearm ownership and violence.” *See* Edith M. Lederer, “Global survey shows more than 1 billion small arms in world, mostly owned by civilians and mostly in the U.S.,” *ChicagoTribune.com*, June 18, 2018, <http://www.chicagotribune.com/news/nationworld/ct-survey-small-arms-world-civilians-20180618-story.html>.

For these reasons, and as detailed below, the NRA supports the proposal but advocates for minor revisions before its publication as a final rule.

I. Firearm Sound Suppressors, As Such, Do Not Meet the Prerequisites for Control on the USML Articulated by the Proposal and Therefore Should be Controlled Under the CCL.

As noted in its supplementary information, the proposal is part of a longstanding effort to “revise the U.S. Munitions List so that its scope is limited to those defense articles that provide the United States with a critical military or intelligence advantage or, in the case of weapons, are inherently for military end use.” Whether or not sound suppressors for firearms are characterized as “weapons,” there is no plausible argument that the devices meet these standards.

A firearm sound suppressor is basically a metal cylinder surrounding internal baffles that slow and cool escaping gas to decrease the volume of the firearm's muzzle report. The devices reduce, but do not eliminate, the sound of gunshots.³ Suppressors have been commercially available since the first decade of the 1900s.⁴ The technology necessary to produce them is simple and well-understood throughout the developed world. Detailed design, development, production, and manufacturing information for firearm sound suppressors is pervasively available in the public domain, including on the Internet.⁵ Similar devices are used to moderate the sound of various other consumer products powered by internal combustion, including automobiles, chainsaws, and lawnmowers.

³ Glenn Kessler, "Are firearms with a silencer 'quiet'?" WashingtonPost.com, March 20, 2017, https://www.washingtonpost.com/news/fact-checker/wp/2017/03/20/are-firearms-with-a-silencer-quiet/?noredirect=on&utm_term=.301e14951dd4.

⁴ Stephen Halbrook, “Firearm Sound Moderators: Issues of Criminalization and the Second Amendment,” 46 *Cumb. L. Rev.* 33, 42 (2015).

⁵ A quick web browser search will reveal numerous webpages and videos offering detailed instructions on constructing suppressors of various levels of sophistication, from products produced with lathes and other machine tools to improvised models made from such materials as PVC, flashlight tubes, oil filters, and solvent traps. There's even a detailed suppressor schematic on the ATF's own website: <https://www.atf.gov/file/silencer-cut-away>.

Suppressors do not provide the United States with any critical military or intelligence advantage. They are not unique to the United States and are in fact the rare type of firearm-related product that historically has been regulated more closely in this country than in a number of other countries with otherwise relatively strict gun control laws. In some foreign countries, there are no special requirements to acquire or possess firearm suppressors; in certain others, they are presumptively available to those with a firearm license.⁶ Firearm suppressors are already in use by military forces, law enforcement agencies, and civilian firearm owners across the world. Simply put, any country sophisticated enough to produce firearms is sophisticated enough to produce firearm sound suppressors.

Firearm sound suppressors, by themselves, are harmless and cannot accurately be classified as “weapons.” They are only useful when actually attached to a firearm. Even then, they do not make the firearm any more lethal. Their primary advantage is to protect the hearing of the firearm’s user and to decrease the sound signature of firearms so their use is less noticeable and has fewer collateral effects on those in vicinity of the firearm’s discharge.

And even assuming, for the sake of argument, suppressors could be characterized as “weapons,” they are not “inherently military.” Suppressors are regulated and taxed under U.S. law,⁷ but they are readily available to those who are legally eligible to own firearms. They are lawful for private possession in 42 states and may be lawfully used for hunting in 40 states.⁸ Suppressors adorn the firearms of plinkers, hunters, competitors, and law enforcement officers. According to the Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF), there were 1,297,670 suppressors registered under the National Firearms Act as of February 3, 2017, with nearly 400,000 such registrations occurring in the 12 months preceding that date alone.⁹ As previously mentioned, suppressors are also commonly used by law enforcement agencies and private firearm owners in other countries as well.

In its current form, the proposal does not differentiate between suppressors for use on firearms that would be regulated under the USML and those that would not. This could mean that firearms that would otherwise be regulated under the CCL will remain on the USML because they have integrated suppressors. It could also mean that firearm instructors would have to refrain from allowing suppressors to be used in their classes for fear of providing unauthorized “defense services.” This is contrary to the spirit and intent of Export Reform and does nothing to further U.S. or international security interests.

Given that there is no special military or national security significance to firearm sound suppressors, there is no convincing argument for retaining them on the USML. Like flash suppressors, they should be generally subject to the CCL. If they are going to be retained on the USML at all, it should only be to the extent that they are “specially designed” for the firearms

⁹ Stephen Gutowski, “ATF: 1.3 Million Silencers in U.S. Rarely Used In Crimes,” FreeBeacon.com, Feb. 17, 2017, <http://freebeacon.com/issues/atf-despite-nearly-1-3-million-silencers-united-states-rarely-used-crimes/>.

that would also continue to be so controlled. Because that distinction would be difficult to administer as a practical matter, however, the best option is simply to control the general category of firearm sound suppressors under the CCL.

II. The Proposal's Treatment of Magazines is Arbitrary and Capricious.

The proposal treats magazines as “high capacity” and therefore subject to the USML if they have a capacity of greater than 50 rounds, “regardless of jurisdiction of the firearm.” It offers no explanation for this threshold. Whatever the thinking behind it may be, a 51-round magazine provides no greater critical military or intelligence advantage than a magazine of lesser capacity, nor is it any more inherently for military end use.

Magazines, whatever their capacity, are among the most simple and utilitarian of firearm-related items. In typical form, they consist of a metal box or tube with a floor plate that contains a spring with a follower at the top. A firearm that can accept a detachable magazine can accept a magazine of virtually any size. All that is necessary to create a magazine of greater capacity is a longer box and spring. Drum magazines typically utilize a cylindrical chamber and a wound spring or ratcheting mechanism to allow for greater capacity in a more compact unit, but neither configuration uses sophisticated or closely-held technology. Like firearm sound suppressors, technical data for magazines with capacities above and below 51 rounds is available in the public domain, including online, and has been since at least the early 20th Century.¹⁰

United States law does not limit the capacity of magazines for any sort of firearm available to private citizens (a handful of states, however, do impose magazine capacity limits, typically of 10 rounds). Magazines with capacities in excess of 50 rounds are readily available on the commercial market. They are used by practical shooting competitors, as well as by many gun owners who appreciate the versatility and convenience they provide. Even BB guns for the youth market that use springs or compressed air often have reservoirs that hold hundreds of rounds. While these non-powder guns obviously are not and would not be defense articles under the proposal, their capacity demonstrates the fact that marksmen of all types appreciate the ability to operate their guns without frequent reloading.

Demonstrating the arbitrary nature of controlling magazines based on their capacity is the fact that they can easily be clipped, taped, or otherwise attached to one another, with reloads accomplished in mere moments.

As with sound suppressors, it makes no sense that a given curriculum of firearm instruction that would otherwise be uncontrolled under the proposal could potentially be re-characterized as a “defense service” if it happened to involve a “large capacity” magazine.

¹⁰ See, e.g., European Patent Office Patent No. 8172, “A New or Improved Cartridge Magazine for Small Arms and Machine Guns,” Accepted March 6, 1919 (providing detailed specifications for a drum-type magazine), available at <https://worldwide.espacenet.com/publicationDetails/originalDocument?CC=GB&NR=191508172A&KC=A&FT=D&ND=3&date=19190306&DB=EPODOC&locale=> (last visited July 6, 2018).

For these reasons, we recommend that firearm magazines be controlled under the CCL. If they are controlled under the USML at all, it should only be to the extent they “specially designed” solely for firearms that remain on the USML.

III. The Final Rule Should Take Effect Immediately to the Extent Requirements Are Eliminated and Phase in Other Changes to Allow Regulated Entities Time to Adapt.

When the final rule governing Categories I, II, and III of the USML is published, certain changes should take effect immediately, while others should be phased in to allow regulated entities time to adapt.

Changes that merely eliminate requirements altogether should take effect immediately. For example, there is no justification for continuing to make “manufacturers” of articles that would be moved off the USML register with the Department of State.

On the other hand, where control of an item changes from the USML to the CCL, necessitating new procedures by the regulated entity, implementation of the final rule’s effective date should be delayed to allow for new compliance systems to be established.

Licenses granted under the ITAR should also be grandfathered for all outstanding transactions.

The NRA does not have any specific recommendations for a timeline of implementation for enforcing new requirements and procedures. We will defer to the entities whose day-to-day operations will be directly affected by the changes in the final rule.

Conclusion

The NRA is very pleased to see Export Reform finally turn its attention to Categories I, II, and III of the USML. The proposal charts a positive course that will contribute to national security, enhance the competitiveness of U.S. businesses, and benefit ordinary gun owners by mitigating the potential for the ITAR to burden innocent conduct that does not implicate national security. We hope you will take the suggestions offered herein seriously to further promote the worthy goals of this effort, and we appreciate the opportunity to provide input.

We have also included our submission on the Bureau of Industry and Security’s companion rulemaking and incorporate those comments herein by this reference.

Sincerely,

Christopher Zealand

**Re: Docket No. BIS-2017-0004; RIN 0694-AF47; Control of Firearms, Guns,
Ammunition and Related Articles the President Determines No Longer Warrant
Control Under the United States Munitions List (USML)**

Greetings:

I am writing on behalf of the National Rifle Association (NRA) to provide the association's comments on the above proposed rule (the proposal). With some six million dues-paying members, the NRA is America's premier defender of the civil right protected by the Second Amendment. Our members include individuals and businesses that would be directly affected by the changes in the proposal, including gunsmiths, firearm instructors, journalists and writers covering firearm technology and development, hunters, competitive shooters, and manufacturers.

The NRA is very pleased to see that the project of Export Reform has finally circled back to the place where it began, with proposed amendments to Categories I, II, and III of the U.S. Munitions List (USML). These were among the first of the changes planned for the large-scale undertaking to update export controls on dual-use items, and rightly so. The Second Amendment protects an individual right to possess and carry firearms in case of confrontation, extending to

arms in common use among the population for lawful purposes.¹ America boasts hundreds of millions of privately-owned firearms² and a robust “gun culture” that has produced countless books, magazine articles, videos, websites, online forums, etc., that exhaustively detail firearm technology and use. It is difficult to imagine any information about the design, development, production, manufacturing, and use of firearms that is not already within the public domain. This same information is commonly available overseas, as are the types of firearms and ammunition the proposal would regulate under the Commerce Control List (CCL). Meanwhile, the might and sophistication of the U.S. military – as well as America’s armed populace – ensure that no foreign enemy wielding the types of arms at issue in these proposed regulations could pose a serious threat to this nation’s security.

Of course, movement of commonly-available firearms and ammunition to the CCL would not leave their export unregulated. America already has one of the most well-established and closely-administered systems of regulation for commercial production and distribution of firearms and ammunition in the world, and the proposal would not change that. It is clear from the proposal that items moving off the USML would remain closely controlled, with the necessity of export licenses remaining the norm. Foreign individuals’ access to firearms and ammunition would also remain regulated under the federal Gun Control Act and the National Firearms Act. Furthermore, the Commerce Department has long regulated exports of various shotguns, as well as their parts, components, accessories, and ammunition. Thus, it has existing knowledge of and relationships with many of the entities the proposal will affect. Those entities, in turn, will also have some familiarity with the Department’s regulatory environment and procedures.

The NRA believes that, on the whole, the proposal correctly balances the imperatives of national and global security, allocation of oversight resources, and promotion of American industry, innovation, and competitiveness. We do, however, think that it could be improved in several particulars. We also believe that the timing for the implementation of the rule deserves careful consideration.

Specifically, our concerns involve the following:

- **§ 740.9 Temporary imports, exports, reexports, and transfers (in-country) (TMP) and § 758. 10 Entry clearance requirements for temporary imports – The use of the Automated Export System (AES) is impractical and inappropriate for private travelers exporting a personal firearm they temporarily imported into the U.S. for**

¹ *District of Columbia v. Heller*, 554 U.S. 570, 592, 624-25 (2008). *See also McDonald v. Chicago*, 561 U.S. 742 (2010) (Second Amendment right to keep and bear arms is fully incorporated against state and local action by virtue of the Fourteenth Amendment).

² The Small Arms Survey estimates that as of the end of 2017, there were 121 firearms for every 100 residents in the U.S., for a total of some 393.2 million guns. The program director for the Small Arms Survey Institute notes, however, that “there is no direct correlation at the global level between firearm ownership and violence.” *See* Edith M. Lederer, “Global survey shows more than 1 billion small arms in world, mostly owned by civilians and mostly in the U.S.,” *ChicagoTribune.com*, June 18, 2018, <http://www.chicagotribune.com/news/nationworld/ct-survey-small-arms-world-civilians-20180618-story.html>.

lawful purposes. The current system, which relies upon the ATF Form 6NIA, should be maintained without modification for such persons.

- § 740.14 Baggage (BAG) and § 758.1 The Electronic Export Enforcement (EEI) filing to the Automated Export System (AES) – The use of the AES is impractical and inappropriate for private travelers temporarily exporting a personal firearm for lawful purposes. The current system, which relies upon the CBP Form 4457, should be maintained without modification for such persons until such time as U.S. Customs and Border Protection engages in a public rulemaking process to resolve the current problems.
- § 758.1 The Electronic Export Enforcement (EEI) filing to the Automated Export System (AES) and § 762.2 Records to be retained – Expanding the data elements necessary for AES filings would exacerbate the problems for private travelers temporarily exporting a personal firearm and violate the spirit of Congressional prohibitions against federal firearm registries. Private travelers temporarily exporting personal firearms should continue to be able to use the CPB Form 4457 without the firearm's information being captured by a federal database.
- Where manufacturers and exporters need to implement new compliance procedures for items moving from the USML to the CCL, the final rule should have a delayed implementation date; where requirements that once pertained under the International Traffic in Arms Regulations (ITAR) have no analogues under the Export Administration Regulations (EAR), the changes should take effect immediately.

For these reasons, and as detailed below, the NRA supports the proposal but advocates for revisions before its publication as a final rule.

I. The AES System is Impractical and Inappropriate for Use by Private Travelers.

A. The AES requirement was introduced without sufficient or accurate notice to the public.

The International Traffic in Arms Regulations historically had included an exemption under 22 CFR §123.17(c) that allowed U.S. persons to temporarily export without a license up to three nonautomatic firearms and not more than 1,000 cartridges therefor. This exemption was geared toward hunters, sportsmen, competitors, and others who travel overseas with firearms to be used for sporting and other lawful purposes.

In 2011, DDTC published a Federal Register notice of proposed rulemaking entitled International Traffic in Arms Regulations: Exemption for Temporary Export of Chemical Agent Protective Gear.³ The supplementary information to that rulemaking focused on amendments to 22 CFR §123.17 pertaining to “the temporary export of chemical agent protective gear for

³ 76 Fed. Reg. 16353 (March 23, 2011).

exclusive personal use” It also mentioned that “an exemption for firearms and ammunition is clarified by removing certain extraneous language that does not change the meaning of the exemption.”⁴

In fact, the proposed change to the firearms and ammunition exemption was a material and substantial change to the status quo. It would require for the first time that “the individual must ... present the Internal Transaction Number (ITN) from submission of the Electronic Export Information in the Automated Export System per § 123.22(b)” to use the exemption.⁵

But because the notice only printed the amendments to 22 CFR §123.17 and omitted the existing text of that section, it was not clear from the face of that notice what the context of this new requirement was. The notice’s inaccurate portrayal of the change as a mere “clarification” further contributed to obscuring the significance of this new language. Thus, the new requirement for temporary firearms and ammunition exports went largely unnoticed by relevant stakeholders.

The final rule was published on May 2, 2012.⁶ Its supplementary information included a similarly inaccurate description of the firearm exemption amendment. “Section (c)(3) is revised to remove what is in practice extraneous language,” it stated.⁷ “Subject to the requirements of (c)(1)–(3), the exemption applies to all eligible individuals (with the noted exceptions). Thus, while the text is revised, the meaning of (c)(3) is not changed.”⁸

Unlike the notice for the proposed rule, however, the notice of the final rule included the full text of subsection (c), which made clear the AES filing requirement pertained to those claiming the licensing exemption for temporary firearm and ammunition exports. Of course, it was by then too late for stakeholders to object to these changes, as the rule had been finalized.

For three years, the changes to 22 CFR §123.17 as they pertained to temporary firearm and ammunition exports appeared to be ignored and unenforced by the federal government. Then, in 2015, U.S. Immigration and Customs Enforcement (ICE) and U.S. Customs and Border Protection (CBP) suddenly changed their websites to indicate the AES filing requirements would be enforced against travelers temporarily exporting firearms and ammunition, with penalties that could include seizure of improperly declared items and criminal prosecution.⁹

⁹ See NRA-ILA, “Rule Change May Devastate International Travel for Hunters and Shooters,” <https://www.nra-ila.org/articles/20150320/rule-change-may-devastate-international-travel-for-hunters-and-shooters> (March 20, 2015).

B. The AES was not designed for use by private persons for non-business purposes.

The AES was designed around the needs of commercial exporters and government officials, not private travelers. As CBP's "Introduction" to the AES states:

During AES development, a Trade Resource Group convened regularly. To ensure that all voices were heard, the group was comprised of large and small exporters, carriers, freight forwarders, port authorities, and non-vessel operating common carriers (NVOCC). At the trade's request, separate coalitions for exporters and software vendors were formed.^[10]

It continues, "Whatever aspect of the export community you represent - exporter, carrier, freight forwarder, port authority, service center, non-vessel operating common carrier, consolidator - AES has advantages for you."¹¹ Nowhere does this summary recognize that private individuals would also have to navigate a system designed by and for industry compliance specialists.

Individuals attempting to use the AES will need to have compatible hardware and software systems or to enlist the services of an authorized agent. Those who do not wish to purchase or write their own software, or hire someone to complete the filing process for them, have the option of using AESDirect, an online version administered by the U.S. Census Bureau.

That agency, in turn, has a webpage with various resources to acquaint users with the intricacies of the system.¹² Browsers can start, for example, with the 39-page *AESDirect User Guide*¹³ or with any of the one-hour-plus webinars that cover various aspects of the system.

Navigating the filing process requires individuals to create an account and then fill in data fields with various codes that are neither intuitive nor easily reconcilable with the context of an individual traveling with his or her own private property. For example, the system requires the parties to an export to be identified, with required fields that include the U.S. Principal Party in Interest, which must be identified by "Company Name" and an acceptable ID type. Likewise, the Ultimate Consignee also must be specified, again with reference to "Company Name" and an authorized form of identification.

Nowhere does the User Guide or the screens of the system itself explain how these categories are supposed to translate for private individuals declaring temporary exports of their

¹⁰ U.S. Customs and Border Protection, "AES: An Introduction," <https://www.cbp.gov/trade/aes/introduction> (last visited July 6, 2018).

¹¹ *Id.*

¹² U.S. Census Bureau, "ACE AESDirect – Resources," https://www.census.gov/foreign-trade/aes/aesdirect/transit/outoace.html?eml=gd&utm_medium=email&utm_source=govdelivery (last visited July 6, 2018).

¹³ Available at <https://www.census.gov/foreign-trade/aes/aesdirect/AESDirect-User-Guide.pdf> (last visited July 6, 2018).

own property. Such persons are not just an afterthought in the system's design. Rather, it appears that the design has not thought of them at all.

The acceptable forms of identification, for example, are an Employer Identification Number (EIN), a Dun and Bradstreet Number, or a foreign passport number (if the foreign entity is in the U.S. at the time the goods are purchased or obtained for export). U.S. individuals making temporary exports cannot use their own passport numbers, nor can they use their Social Security numbers.¹⁴

Using AESDirect, moreover, requires an individual to apply for an account with the Secure Data Portal of the Automated Commercial Environment. The application for an ACE Exporter Account¹⁵ requires users to list "Corporate Information," including an EIN and Company Name.

The Internal Revenue Service (IRS) is responsible for issuing EINs. The IRS website that explains the process for applying online clearly states: "Employer Identification Numbers are issued for the purpose of tax administration and are not intended for participation in any other activities."¹⁶ The online application requires the applicant to identify the "legal structure" associated with the EIN. None of the available options corresponds with a private individual who simply wishes to make an AES filing. The applicant then must specify why he or she is requesting an EIN, with the limited menu choices again offering no option for the private AES filer. Finally, the applicant must certify under penalties of perjury that he or she has "examined this application, and to the best of my knowledge and belief, it is true, correct, and complete."¹⁷

Private individuals using the online application form, in other words, must make a false certification to the IRS about their business need for an EIN as a prerequisite to complying with the legally-mandated AES filing requirement. These individuals are also potentially creating an expectation with the IRS that they are creating a business that should have associated tax filings.

C. The relevant agencies have been aware of the problems private individuals have using the AES, and there has been no apparent progress in resolving them.

In 2015, representatives of the NRA – as well as representatives of hunting and firearm industry associations – met with officials from CBP, the Census Bureau, the Department of

¹⁴ See U.S. Customs and Border Protection, "Change in Automated Export System (AES) exporter ID filing requirement," https://help.cbp.gov/app/answers/detail/a_id/1145/kw/EIN%20number%20needed%20for%20export (last visited July 6, 2018).

¹⁶ IRS, "Apply for an Employer Identification Number (EIN) Online," <https://www.irs.gov/businesses/small-businesses-self-employed/apply-for-an-employer-identification-number-ein-online> (last visited July 6, 2018).

¹⁷ See IRS Form SS-4, available at <https://www.irs.gov/pub/irs-pdf/ss4.pdf> (last visited July 6, 2018). Note the PDF of the SS-4 has options for "Other (specify)" not available on the IRS's online application form. It does not, however, indicate that EINs may be obtained solely for AES filing purposes.

Homeland Security (DHS), and ICE to discuss the above problems.¹⁸ These discussions emphasized the need for a simple, straightforward, and legal means for private travelers to comply with their AES filing requirements. The discussions also touched on concerns about creating a federal firearm registry via AES filings (a topic that is explored below in greater depth).

Shortly after that meeting, and after additional intervention from members of Congress, CBP announced that it would return to the status quo practice of using the paper CBP Form 4457 to track firearms for temporary export.¹⁹ In this procedure, travelers report to a CBP office during their trip or beforehand at a Port of Entry and present the firearms (and ammunition, if applicable) to be recorded on the 4457. Upon return to the U.S., the traveler will declare the property, which can be checked, if necessary, against the 4457 to ensure the same firearms that left the country have returned. The ATF has also indicated that this procedure will satisfy the re-importation of firearms under its importation jurisdiction.²⁰

We understand that this remains the procedure for temporary firearm exports by private travelers to the present day and that the AES filing requirement is not being enforced against these individuals.

Between 2015 and the present, NRA representatives have had repeated contacts with officials from CBP and the Census Bureau to inquire about any changes or updates to the above-described state of affairs. To date, we have neither seen nor heard of any evidence that the AES system has been in any way modified to alleviate the problems it presents for private travelers. Our review of the applicable websites during the preparation of these comments confirms this impression. The AES remains a complex application geared toward the needs of industry and government, not private persons traveling with their own property for non-business purposes.

D. BIS should omit the AES filing requirement for private persons temporarily exporting their own firearms and ammunition for lawful purposes and codify the Form 4457 procedure.

The NRA is pleased to see that BIS' current proposal is handling the AES issue in a much more transparent and forthright manner than the 2012 DDTC rulemaking that introduced it in the first place. The background information included with the proposal acknowledges:

BIS is aware that U.S. Customs and Border Protection (CBP) has temporarily suspended the requirement to file EEI to the AES for personally-owned firearms and ammunition that are "subject to the ITAR" being exported under 22 CFR 123.17(c), due to

²⁰ See 27 C.F.R. § 478.115(a).

operational challenges related to implementation. ... Whether and how BIS includes this requirement in a final rule would be based on whether CBP is able to update its processes, and other agencies as needed, to allow for individuals to easily file EEI in AES by the time a final rule is published. If CBP is not able to do so, then the final rule may direct exporters to continue to use CBP's existing process, which is the use of the CBP Certification of Registration Form 4457, until a workable solution is developed or CBP suggests an alternative simplified solution for gathering such information for temporary exports of personally-owned firearms and ammunition.
